Notes:

**Paediatric regulatory details**

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-000115-PIP01-07
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	23 September 2015
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	20 August 2015
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

The primary objective of the study was to determine the ability of ataluren to slow disease progression as assessed by ambulatory decline (decrease in 6-minute walk distance [6MWD]).

Protection of trial subjects:

The study was conducted in accordance with the ethical principles that have their origins in the Declaration of Helsinki (revised version of Edinburgh, Scotland, 2000) and in conformance with the International Conference on Harmonisation (ICH) Good Clinical Practice (GCP) guidance documents.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	26 March 2013
Long term follow-up planned	Yes
Long term follow-up rationale	Safety
Long term follow-up duration	35 Months
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	United States: 68
Country: Number of subjects enrolled	Spain: 22
Country: Number of subjects enrolled	France: 17
Country: Number of subjects enrolled	Turkey: 16
Country: Number of subjects enrolled	Chile: 14
Country: Number of subjects enrolled	Germany: 13
Country: Number of subjects enrolled	United Kingdom: 13
Country: Number of subjects enrolled	Italy: 11
Country: Number of subjects enrolled	Australia: 10
Country: Number of subjects enrolled	Poland: 8
Country: Number of subjects enrolled	Canada: 7
Country: Number of subjects enrolled	Sweden: 7
Country: Number of subjects enrolled	Belgium: 6
Country: Number of subjects enrolled	Brazil: 5
Country: Number of subjects enrolled	Korea, Republic of: 4
Country: Number of subjects enrolled	Switzerland: 3
Country: Number of subjects enrolled	Czech Republic: 3
Country: Number of subjects enrolled	Israel: 3

Worldwide total number of subjects	230
EEA total number of subjects	100

Notes:

---

**Subjects enrolled per age group**

---

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	209
Adolescents (12-17 years)	21
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

---

## Subject disposition

### Recruitment

Recruitment details:

A total of 291 participants were screened for eligibility, of which 61 participants did not meet entry criteria.

### Pre-assignment

Screening details:

A total of 230 eligible participants were randomized in 1:1 ratio to receive either placebo or ataluren. 2 participants, 1 in each treatment arm, were excluded from intent-to-treat (ITT) population; as they did not have at least 1 valid post-baseline 6MWD value, a requirement for inclusion in ITT population.

### Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Carer, Assessor

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Placebo

Arm description:

Participants received placebo matched to ataluren orally 3 times a day (TID) at morning, midday, and evening for 48 weeks.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Granules for oral suspension
Routes of administration	Oral use

Dosage and administration details:

Placebo matched to ataluren will be administered as per the schedule specified in the arm.

<b>Arm title</b>	Ataluren
------------------	----------

Arm description:

Participants received ataluren suspension orally TID, 10 milligrams/kilogram (mg/kg) at morning, 10 mg/kg at midday, and 20 mg/kg at evening (total daily dose 40 mg/kg) for 48 weeks.

Arm type	Experimental
Investigational medicinal product name	Ataluren
Investigational medicinal product code	PTC124
Other name	
Pharmaceutical forms	Granules for oral suspension
Routes of administration	Oral use

Dosage and administration details:

Ataluren will be administered as per the dose and schedule specified in the arm.

<b>Number of subjects in period 1</b>	Placebo	Ataluren
Started	115	115
As-treated Population	115	115
ITT Population	114	114
Completed	111	110
Not completed	4	5
Consent withdrawn by subject	1	3
Adverse event, non-fatal	1	1
Lost to follow-up	1	-
Protocol deviation	1	1

## Baseline characteristics

### Reporting groups

Reporting group title	Placebo
Reporting group description:	
Participants received placebo matched to ataluren orally 3 times a day (TID) at morning, midday, and evening for 48 weeks.	
Reporting group title	Ataluren
Reporting group description:	
Participants received ataluren suspension orally TID, 10 milligrams/kilogram (mg/kg) at morning, 10 mg/kg at midday, and 20 mg/kg at evening (total daily dose 40 mg/kg) for 48 weeks.	

Reporting group values	Placebo	Ataluren	Total
Number of subjects	115	115	230
Age categorical			
Units: Subjects			
Age Continuous			
Units: years			
arithmetic mean	9.0	8.9	
standard deviation	± 1.65	± 1.79	-
Sex: Female, Male			
Units: Subjects			
Female	0	0	0
Male	115	115	230
Baseline 6MWD			
The 6MWD test is a non-encouraged test performed in a 30 meters long flat corridor, where the participant is instructed to walk as far as possible, back and forth around two cones, with the permission to slow down, rest, or stop if needed. Ambulation was assessed via the 6MWD test following standardized procedures by measuring the 6MWD in meters. Participants were not permitted to use assistive devices (walker, long leg braces, or short leg braces) during the 6MWD test.			
Units: Subjects			
<300 meters	22	25	47
>=300 to <400 meters	52	47	99
>=400 meters	41	43	84
6MWD			
6MWD test is a non-encouraged test performed in a 30 meters long flat corridor, where the participant is instructed to walk as far as possible, back and forth around two cones, with the permission to slow down, rest, or stop if needed. Ambulation was assessed via the 6MWD test following standardized procedures by measuring the 6MWD in meters. Participants were not permitted to use assistive devices (walker, long leg braces, or short leg braces) during the 6MWD test.			
Units: meters			
arithmetic mean	362.69	364.04

Time to Walk/Run 10 Meters			
Units: seconds			
arithmetic mean	6.83	6.66	
standard deviation	± 2.924	± 3.078	-
Time to Climb 4 Stairs			
Number of participants analyzed were 112 for each arm.			
Units: seconds			
arithmetic mean	6.76	5.99	

standard deviation	± 7.287	± 5.347	-
Time to Descend 4 Stairs			
Number of participants analyzed were 109 and 112 for Placebo and Ataluren arm respectively.			
Units: seconds			
arithmetic mean	5.05	5.07	
standard deviation	± 5.362	± 5.157	-
Physical Function Total Score as Measured by North Star Ambulatory Assessment (NSAA)			
Number of participants analyzed were 114 for each arm.			
Units: units on a scale			
arithmetic mean	60.2	60.9	
standard deviation	± 18.37	± 17.97	-
Pediatric Outcomes Data Collection Instrument (PODCI) Transfers/Basic Mobility Score			
PODCI includes a Global Functioning Scale and 5 core scales: Upper Extremity & Physical Function, Transfer/Basic Mobility, Sports/Physical Functioning, Pain/Comfort, and Happiness. Transfers/Basic Mobility domain assesses difficulty experienced in performing routine motor activities in daily life. Each domain was scored from 0 (poor outcome/worse health) to 100 (the highest level of functioning & least pain). Number of participants analyzed were 114 for each arm.			
Units: units on a scale			
arithmetic mean	81.4	83.9	
standard deviation	± 15.79	± 13.10	-
Pediatric Outcomes Data Collection Instrument (PODCI) Sports/Physical Functioning Score			
PODCI includes a Global Functioning Scale and 5 core scales: Upper Extremity & Physical Function, Transfer/Basic Mobility, Sports/Physical Functioning, Pain/Comfort, and Happiness. Sports/Physical Functioning domain assesses difficulty encountered in participating in more active recreational activities. Each domain was scored from 0 (poor outcome/worse health) to 100 (the highest level of functioning & least pain). Number of participants analyzed were 114 for each arm.			
Units: units on a scale			
arithmetic mean	56.0	56.2	
standard deviation	± 20.94	± 18.94	-

## End points

### End points reporting groups

Reporting group title	Placebo
Reporting group description:	
Participants received placebo matched to ataluren orally 3 times a day (TID) at morning, midday, and evening for 48 weeks.	
Reporting group title	Ataluren
Reporting group description:	
Participants received ataluren suspension orally TID, 10 milligrams/kilogram (mg/kg) at morning, 10 mg/kg at midday, and 20 mg/kg at evening (total daily dose 40 mg/kg) for 48 weeks.	

### Primary: Change From Baseline in 6MWD at Week 48

End point title	Change From Baseline in 6MWD at Week 48
End point description:	
The 6MWD test is a non-encouraged test performed in a 30 meters long flat corridor, where the participant is instructed to walk as far as possible, back and forth around two cones, with the permission to slow down, rest, or stop if needed. Ambulation was assessed via the 6MWD test following standardized procedures by measuring the 6MWD in meters. Participants were not permitted to use assistive devices (walker, long leg braces, or short leg braces) during the 6MWD test. Participants with confirmed loss of ambulation at a particular visit were assigned a 6MWD result of 0. Baseline and Week 48 6MWD values are each the average of two valid 6MWD values, or a single available value if one was missing. ITT population included all participants who were randomized and received any study treatment; and had a valid baseline, and at least one valid post-baseline 6MWD value. Multiple imputation was applied to impute missing values within the treatment groups.

### Statistical analyses

Statistical analysis title	Placebo versus Ataluren
Statistical analysis description:	
Analysis was performed using analysis of covariance (ANCOVA) method including stratification factors for age (less than [ $<$ ] 9 years versus [vs.] greater than or equal to [ $\geq$ ] 9 years), duration of use of corticosteroids at baseline (approx. $\geq 6$ to $< 12$ months vs. $\geq 12$ months), and baseline 6MWD category ( $\geq 350$ meters vs $< 350$ meters), as well as baseline 6MWD as covariate.	
Comparison groups	Placebo v Ataluren

Number of subjects included in analysis	228
Analysis specification	Pre-specified
Analysis type	other
P-value	= 0.213 <sup>[1]</sup>
Method	Mixed models analysis
Parameter estimate	Mean difference (final values)
Point estimate	12.98
Confidence interval	
level	95 %
sides	2-sided
lower limit	-7.44
upper limit	33.39
Variability estimate	Standard error of the mean
Dispersion value	10.415

Notes:

[1] - Threshold for significance at 0.05. Secondary endpoints were tested for significance, only if the primary endpoint was statistically significant.

### Secondary: Time to 10 Percent (%) Persistent Worsening in 6MWD

End point title	Time to 10 Percent (%) Persistent Worsening in 6MWD
End point description:	
<p>6MWD test was performed in a 30 meters long flat corridor, where participant was instructed to walk as far as possible, back and forth around two cones, with permission to slow down, rest, or stop. Participants were not permitted to use assistive devices (walker, long leg braces, or short leg braces) during test. Time to 10% persistent worsening in 6MWD: last time that 6MWD was not 10% worse than baseline. For participants who did not have 10% 6MWD worsening or who were removed from study, time to 10% 6MWD worsening was censored at the time of last 6MWD test. Participants who became non-ambulatory were considered to have 10% worsening. ITT population: all participants who were randomized and received any study treatment; and had a valid baseline, and at least one valid post-baseline 6MWD value. Multiple imputation was applied to impute missing value. 'n'=participants evaluable for specified categories. '99999'=data not calculated due to smaller number of participant with an event.</p>

### Secondary: Change From Baseline in Time to Walk/Run 10 Meters at Week 48

End point title	Change From Baseline in Time to Walk/Run 10 Meters at Week 48
-----------------	---

End point description:

The method of walk/run used by participant was categorized as follows: 1. Unable to walk independently; 2. Unable to walk independently but can walk with support; 3. Highly adapted gait, wide-based lordotic gait, cannot increase walking speed; 4. Moderately adapted gait, can pick up speed but cannot run; 5. Able to pick up speed but runs with a double stance phase (that is, cannot achieve both feet off the ground); 6. Runs and gets both feet off the ground (with no double stance phase). If time taken to perform a test exceeded 30 seconds or if a participant could not perform test due to disease progression, a value of 30 seconds was used. A cumulative change from baseline data has been reported. ITT population included all participants who were randomized and received any study treatment; and had a valid baseline, and at least one valid post-baseline 6MWD value. Here, 'Overall number of participants analyzed' signifies participants evaluable for this outcome measure.

### Secondary: Percentage of Participants With Treatment-Emergent Adverse Events (AEs)

End point title	Percentage of Participants With Treatment-Emergent Adverse Events (AEs)
End point description:	
An AE was any untoward medical occurrence in a participant who received study drug without regard to possibility of causal relationship. Serious adverse event (SAE) was an AE resulting in any of the following outcomes or deemed significant for any other reason: death; initial or prolonged inpatient hospitalization; life-threatening experience (immediate risk of dying); persistent or significant disability/incapacity; congenital anomaly. AEs included both SAEs and non-serious AEs. Treatment-	

emergent adverse event (TEAE) was defined as an adverse event that occurred or worsened in the period extending from first dose of study drug to 6 weeks after the last dose of study drug. A summary of other non-serious AEs and all SAEs, regardless of causality is located in the 'Reported AE section'. As-treated population included all randomized participants who actually received any study treatment.

## Other pre-specified: Number of Participants With Change From Baseline in Activities of Daily Living and Disease Status at Week 48, as Assessed by a Standardized Survey Administered by Site Personnel

End point title	Number of Participants With Change From Baseline in Activities of Daily Living and Disease Status at Week 48, as Assessed by a Standardized Survey Administered by Site Personnel
-----------------	---

End point description:

At screening or baseline, participant and/or parent/caregiver were asked to identify any activities of daily living (ambulation, balance, personal hygiene/grooming, dressing and undressing, self-feeding, using bathroom, handwriting, school performance, behavior or energy level) or symptoms that were affected by participant's DMD. At post-baseline (Week 48), same participant and/or parent/caregiver was asked to describe any changes from baseline in those activities of daily living/symptoms, within following categories: physical functioning(PF); general energy level(EL); cognition/school function(C/SF); emotional/social functioning(E/SocF); and sleep. Changes were reported on a 5-point Likert scale: 1=much worse, 2=slightly worse, 3=unchanged, 4=slightly better, or 5=much better. ITT population: all participants who were randomized and received any study treatment; and had a valid baseline, and at least one valid post-baseline 6MWD value. 'n'=participants evaluable for specified categories.

## Other pre-specified: Change From Baseline in Physical Function Total Score as Measured by NSAA at Week 48

End point title	Change From Baseline in Physical Function Total Score as Measured by NSAA at Week 48
-----------------	--

End point description:

NSAA is a functional scale specifically designed for ambulant Duchenne muscular dystrophy (DMD) participants. It comprised tests for 17 abilities: ability to stand, rise from floor, get from lying to sitting, get from sitting to standing, raise one's head, stand on one's heels, hop, jump, and run. For each activity, a score of 0,1, or 2 was recorded, with 0=unable to achieve independently,1=modified method but achieves goal independently, or 2 =normal- achieves goal independently. Sum of these scores(except for 'raise one's head' activity) was reported as ordinal total score, which was transformed to a linear total score ranging from 0(worst) to 100(best). Participants with confirmed loss of ambulation at a particular visit were assigned a score of 0. ITT population:all participants who were randomized and received any study treatment; and had a valid baseline, and at least one valid post-baseline 6MWD value. 'Number of participants analyzed'=participants evaluable for this endpoint.

End point type	Other pre-specified
End point timeframe:	
Baseline, Week 48	

End point values	Placebo	Ataluren		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	108	106		
Units: units on a scale				
arithmetic mean (standard deviation)	-8.4 ( $\pm$ 10.65)	-6.3 ( $\pm$ 10.64)

**Other pre-specified: Change From Baseline in PODCI Transfers/Basic Mobility and Sports/Physical Functioning Scores at Week 48**

---

End point title	Change From Baseline in PODCI Transfers/Basic Mobility and Sports/Physical Functioning Scores at Week 48
-----------------	--

End point description:

Changes in health-related quality of life (HRQL) were measured via PODCI questionnaire. PODCI includes a Global Functioning Scale and 5 core scales: Upper Extremity and Physical Function, Transfer/Basic Mobility, Sports/Physical Functioning, Pain/Comfort, and Happiness. Following PODCI domains were prespecified in protocol for analysis: Transfers/Basic Mobility domain assesses difficulty experienced in performing routine motor activities in daily life. Sports/Physical Functioning domain assesses difficulty encountered in participating in more active recreational activities. Each domain was scored from 0 to 100, with 0=poor outcome/worse health, while 100=the highest level of functioning and least pain. ITT population: all participants who were randomized and received any study treatment; and had a valid baseline, and at least one valid post-baseline 6MWD value. 'Number of participants analyzed'=participants evaluable for this endpoint.

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

Baseline up to 6 weeks after the last dose of study drug (Week 54)

Adverse event reporting additional description:

As-treated population included all randomized participants who actually received any study treatment.

Assessment type	Systematic
-----------------	------------

### Dictionary used

Dictionary name	MedDRA
-----------------	--------

Dictionary version	15.1
--------------------	------

### Reporting groups

Reporting group title	Placebo
-----------------------	---------

Reporting group description:

Participants received placebo matched to ataluren orally TID at morning, midday, and evening for 48 weeks.

Reporting group title	Ataluren
-----------------------	----------

Reporting group description:

Participants received ataluren suspension orally TID, 10 mg/kg at morning, 10 mg/kg at midday, and 20 mg/kg at evening (total daily dose 40 mg/kg) for 48 weeks.

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
13 June 2013	The changes implemented with this amendment are: - Incorporated feedback from the European Medicines Agency (EMA) related to the non-allowance of protocol waivers; - Added the timed test of rising from supine to stand; - Amended the criteria for withdrawal of a participant from the study due to the participant's condition substantially worsening after initiating study drug to include worsening of cardiac events such as QTc interval limits, new evidence of symptomatic cardiomyopathy, and significant decrease in left ventricular ejection fraction; - Deleted any requirement that there be any discussion between the investigator and the PTC Therapeutics medical monitor before unblinding a participant; Added information regarding benefits and risks of study participation.
04 March 2014	The changes implemented with this amendment are: - Updated information regarding ongoing ataluren studies; - Clarified inclusion criterion related to documentation of gene sequencing; - Clarified inclusion criterion related to no more than 20% change from screening to baseline 6MWD; - Updated the approximate number of investigator sites participating in study; - Updated the requirement for collection of date of birth for Screening; - Updated the actions to be taken in event of urine blood abnormalities; - Added information regarding renal abnormalities related to aminoglycosides; - Updated information regarding drugs metabolized by cytochrome P450 enzymes; - Updated information regarding potential drug interactions; - Updated schedule of events to clarify the timing of events such as randomization, study drug administration in clinic, study drug dispensing, and the Visit 2, Day 2 6MWT; - Updated the recommended sequence of study procedures at Visit 2 to 8, by updating sequence of events and timing of randomization; - Clarified the timing of randomization of a participant at Visit 2, Day 2; - Clarified End-of-Treatment Visit procedures for participants who discontinue prematurely; - Clarified Post-Treatment Visits procedures; - Added information regarding videotaping of the 6MWT, timed function tests, and NSAA; - Clarified the schedule for administration of Activities of Daily Living/Disease Symptom Survey at baseline; - Updated the blood volumes for the required blood draws; - Added information regarding blood pressure assessment; - Summarized information regarding tumor findings in rat studies as already included in the Ataluren Investigator Brochure; - Deleted any mention of forfeiture of participation in the open-label extension study for breaking the blind of the study; - Added information regarding benefits and risks of study participation.

Notes:

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

None reported
