#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Interim
Date of interim/final analysis	26 February 2016
Is this the analysis of the primary completion data?	Yes
Primary completion date	26 February 2016
Global end of trial reached?	No

Notes:

## General information about the trial

Main objective of the trial:

To demonstrate that the combination of palbociclib with letrozole is superior to placebo plus letrozole in prolonging progression-free survival (PFS) in postmenopausal women with ER-positive/HER2-negative ABC who have not received any prior systemic anti cancer therapies for their advanced/metastatic disease.

Protection of trial subjects:

This study was conducted in compliance with the ethical principles originating in or derived from the Declaration of Helsinki and in compliance with all International Council on Harmonisation (ICH) Good Clinical Practice (GCP) Guidelines . In addition, all local regulatory requirements were followed, in particular, those affording greater protection to the safety of study participants.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	22 February 2013
Long term follow-up planned	Yes
Long term follow-up rationale	Efficacy, Safety
Long term follow-up duration	46 Months
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Australia: 20
Country: Number of subjects enrolled	Belgium: 28
Country: Number of subjects enrolled	Canada: 70
Country: Number of subjects enrolled	France: 33
Country: Number of subjects enrolled	Germany: 27
Country: Number of subjects enrolled	Hungary: 7
Country: Number of subjects enrolled	Ireland: 22
Country: Number of subjects enrolled	Italy: 11
Country: Number of subjects enrolled	Japan: 46
Country: Number of subjects enrolled	Korea, Democratic People's Republic of: 24
Country: Number of subjects enrolled	Poland: 5
Country: Number of subjects enrolled	Russian Federation: 60
Country: Number of subjects enrolled	Spain: 57
Country: Number of subjects enrolled	Taiwan: 2
Country: Number of subjects enrolled	Ukraine: 39
Country: Number of subjects enrolled	United Kingdom: 18
Country: Number of subjects enrolled	United States: 197

Worldwide total number of subjects	666
EEA total number of subjects	208

Notes:

<b>Subjects enrolled per age group</b>	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	404
From 65 to 84 years	262
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

Between 28 February 2013 and 29 July 2014, 666 women were randomized at 186 sites in 17 countries.

### Pre-assignment

Screening details:

The study consisted of a screening visit within 28 days before randomization, an active treatment phase, divided in cycles of 28 days each, and a post-treatment follow-up period during which survival and new anti-cancer therapy information was collected every 6 months ( $\pm 7$  days) from the last dose of study treatment.

### Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Investigator, Subject

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Palbociclib plus Letrozole

Arm description:

Participants received letrozole 2.5 milligram (mg) orally QD (once daily) combined with palbociclib 125 mg QD for 21 days of every-28-day cycle, followed by 7 days off treatment.

Arm type	Experimental
Investigational medicinal product name	Palbociclib
Investigational medicinal product code	PD-0332991
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Palbociclib was supplied as capsules containing 75 mg, 100 mg, or 125 mg equivalents of palbociclib free base

Investigational medicinal product name	Letrozole
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Coated tablet
Routes of administration	Oral use

Dosage and administration details:

2.5 mg, orally once daily

<b>Arm title</b>	Placebo plus Letrozole
------------------	------------------------

Arm description:

Participants received letrozole 2.5 mg orally QD combined with placebo QD for 21 days of every-28-day cycle, followed by 7 days off treatment.

Arm type	Control
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Placebo was supplied as capsules containing 75 mg, 100 mg, or 125 mg equivalents of placebo free base

Investigational medicinal product name	Letrozole
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Coated tablet
Routes of administration	Oral use

Dosage and administration details:

2.5 mg, orally once daily

<b>Number of subjects in period 1</b>	Palbociclib plus Letrozole	Placebo plus Letrozole

## End points

### End points reporting groups

Reporting group title	Palbociclib plus Letrozole
Reporting group description: Participants received letrozole 2.5 milligram (mg) orally QD (once daily) combined with palbociclib 125 mg QD for 21 days of every-28-day cycle, followed by 7 days off treatment.	
Reporting group title	Placebo plus Letrozole
Reporting group description: Participants received letrozole 2.5 mg orally QD combined with placebo QD for 21 days of every-28-day cycle, followed by 7 days off treatment.	
Subject analysis set title	Palbociclib plus Letrozole
Subject analysis set type	Sub-group analysis
Subject analysis set description: Participants received letrozole 2.5 milligram (mg) orally QD (once daily) combined with palbociclib 125 mg QD for 21 days of every-28-day cycle, followed by 7 days off treatment.	
Subject analysis set title	Placebo plus Letrozole
Subject analysis set type	Sub-group analysis
Subject analysis set description: Participants received letrozole 2.5 mg orally QD combined with placebo QD for 21 days of every-28-day cycle, followed by 7 days off treatment.	

### Primary: Progression-Free Survival (PFS) as assessed by the Investigator.

End point title	Progression-Free Survival (PFS) as assessed by the Investigator.
End point description: PFS is defined as the time from the date of randomization to the date of the first documentation of objective tumor progression as per RECIST v.1.1 or death due to any cause in the absence of documented PD, whichever occurs first. If tumor progression data include more than 1 date, the first date will be used. PFS (in months) will be calculated as (first event date – randomization date + 1)/30.4.	
End point type	Primary
End point timeframe: From randomization date to date of first documentation of progression OR death (up to approximately 2.5 years)	

End point values	Palbociclib plus Letrozole	Placebo plus Letrozole		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	444	222		
Units: Months				
median (confidence interval 95%)	24.8 (22.1 to 99999)	14.5 (12.9 to 17.1)		

### Statistical analyses

Statistical analysis title	Statistical Analysis for PFS

level	95 %
sides	2-sided
lower limit	0.463
upper limit	0.718

Notes:

[1] - 1-sided p-value from the stratified log-rank test.

## Secondary: Objective Response as assessed by the Investigator

End point title	Objective Response as assessed by the Investigator
End point description:	
Objective Response (OR) is defined as the overall complete response (CR) or partial response (PR) according to the Response Evaluation Criteria in Solid Tumors (RECIST version 1.1). Objective Response Rate (ORR) is defined as the proportion of participants with CR or PR relative to all randomized patients and randomized patients with measurable disease at baseline. Patients who do not have on-study radiographic tumor re-evaluation, who received anti-tumor treatment other than the study medication prior to reaching a CR or PR, or who died, progressed, or dropped out for any reason prior to reaching a CR or PR were counted as non-responders in the assessment of ORR.	
End point type	Secondary
End point timeframe:	
From randomization until end of treatment (up to approximately 2.5 years)	

End point values	Palbociclib plus Letrozole	Placebo plus Letrozole		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	444	222		
Units: Percentage of participants				
number (confidence interval 95%)	46.4 (41.7 to 51.2)	38.3 (31.9 to 45)		

## Statistical analyses

upper limit	2.03

Notes:

[2] - 1-sided p-value is from exact test.

## Secondary: Objective Response: Patients with measurable disease at baseline as assessed by the Investigator

End point title	Objective Response: Patients with measurable disease at baseline as assessed by the Investigator
-----------------	--

End point description:

Objective Response (OR) is defined as the overall complete response (CR) or partial response (PR) according to the Response Evaluation Criteria in Solid Tumors (RECIST version 1.1). Objective Response Rate (ORR) is defined as the proportion of participants with CR or PR relative to all randomized patients and randomized patients with measurable disease at baseline. Patients who do not have on-study radiographic tumor re-evaluation, who received anti-tumor treatment other than the study medication prior to reaching a CR or PR, or who died, progressed, or dropped out for any reason prior to reaching a CR or PR were counted as non-responders in the assessment of ORR.

End point type	Secondary
----------------	-----------

End point timeframe:

From randomization until end of treatment (up to approximately 2.5 years)

End point values	Palbociclib plus Letrozole	Placebo plus Letrozole		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	338	171		
Units: Percentage of participants				
number (confidence interval 95%)	60.7 (55.2 to 65.9)	49.1 (41.4 to 56.9)		

## Statistical analyses

Statistical analysis title	Statistical Analysis for OR
----------------------------	-----------------------------

Statistical analysis description:

Stratified analysis: Stratified by disease site (visceral vs non-visceral) per randomization.

Comparison groups	Palbociclib plus Letrozole v Placebo plus Letrozole
-------------------	---

Number of subjects included in analysis	509
Analysis specification	Pre-specified
Analysis type	superiority
P-value	= 0.009 <sup>[3]</sup>
Method	Fisher exact
Parameter estimate	Odds ratio (OR)
Point estimate	1.594
Confidence interval	
level	95 %
sides	2-sided
lower limit	1.08
upper limit	2.347

Notes:

[3] - 1-sided p-value is from exact test.

## Secondary: Duration of Response (DR)

End point title	Duration of Response (DR)
End point description:	
DR is defined as the time from the first documentation of objective tumor response (CR or PR) to the first documentation of disease progression or to death due to any cause, whichever occurs first. If tumor progression data included more than 1 date, the first date will be used. DR was calculated as [the date response ended (i.e. date of PD or death) – first CR or PR date + 1)]/30.4. DR would only be calculated for the subgroup of patients with an objective tumor response.	
End point type	Secondary
End point timeframe:	
From randomization until end of treatment (up to approximately 2.5 years)	

End point values	Palbociclib plus Letrozole	Placebo plus Letrozole		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	206	85		
Units: Months				
median (confidence interval 95%)	20.1 (19.3 to 28)	16.7 (13.8 to 22.5)		

## Statistical analyses

No statistical analyses for this end point

## Secondary: Disease Control (DC)/Clinical Benefit Response (CBR)

End point title	Disease Control (DC)/Clinical Benefit Response (CBR)
End point description:	
DC is defined as the overall CR, PR, or stable disease (SD) ≥24 weeks according to the RECIST version 1.1; Appendix 1. Disease Control Rate (DCR) is defined as the proportion of participants with CR, PR, or SD ≥24 weeks relative to all randomized participants. Designation of best response of SD ≥24 weeks required the criteria to be met at least 24 weeks after randomization. Participants who do not have on-study radiographic tumor reevaluation, who received anti-tumor treatment other than the study medication prior to reaching a CR or PR, a best response of SD≥24 weeks, or who died, progressed, or dropped out for any reason prior to achieving reaching a CR or PR and a best response of SD ≥24 weeks	

was counted as non-responders in the assessment of DCR.

End point type	Secondary
End point timeframe:	
From randomization until end of treatment (up to approximately 2.5 years)

## Secondary: Corrected QT interval (QTc) time-matched change from baseline on Cycle 1 Day 14

End point title	Corrected QT interval (QTc) time-matched change from baseline on Cycle 1 Day 14
End point description: <p>Triplicate 12-lead ECG measurements (each recording separated by approximately 2 minutes) were performed and sent to a central laboratory for blinded manual adjudication. The average was calculated. The time corresponding to beginning of depolarization to repolarization of the ventricles (QT interval) was adjusted for RR interval using QT and RR from each ECG by Fridericia's formula (<math>QTcF = QT</math> divided by cube root of RR), by Bazette's formula (<math>QTcB = QT</math> divided by square root of RR) and corrected QT interval according to study-specific criteria (QTcS). Time-matched change from baseline values were reported for QTc analysis population.</p>	
End point type	Secondary
End point timeframe: <p>Time-matched triplicate ECGs were collected at 0 (predose), 2, 4, 6 and 8 hours on Day 0 and on Cycle1 Day14</p>

## Secondary: Change from Baseline Between Treatment Comparison in Euro Quality of Life (EQ-5D) Index

End point title	Change from Baseline Between Treatment Comparison in Euro Quality of Life (EQ-5D) Index
-----------------	---

End point description:

The EuroQol EQ-5D is a brief self-administered health status instrument consisting of two parts. In the first part participants were asked to describe their health state on 5 dimensions (mobility, self-care, usual activities, pain or discomfort, and anxiety or depression) with each dimension having 3 levels of function (1=no problem, 2=some problem, and 3=extreme problem). The scores on the 5 dimensions were summarized to create a single summary score, because the questions may be answered differently in different countries / regions due to different local customs and social perspectives. The summary score is called the summary index or the health utility value. The second part of EuroQoL EQ-5D is a visual analogue scale (VAS) in which the participants rate their overall health status using values from 0 (worst imaginable) to 100 (best imaginable). A positive change indicates improvement from baseline and a negative change indicates deterioration.

End point type	Secondary

## Secondary: Change from Baseline Between Treatment Comparison in Functional Assessment of Cancer therapy -Breast (FACT-B)

End point title	Change from Baseline Between Treatment Comparison in Functional Assessment of Cancer therapy -Breast (FACT-B)
-----------------	---

End point description:

FACT is a modular approach to assess participant health-related quality of life using a 'core' set of questions (FACT-G) as well as a cancer site-specific module. The FACT-G is a 27-item compilation of general questions divided into 4 domains: Physical Well-Being, Social/Family Well-Being, Emotional Well-Being, and Functional Well-Being. The FACT-B consisted of the FACT-G (27-item) and a breast-specific module: a 10-item instrument designed to assess participant concerns relating to breast cancer. For all questions, participants were asked to respond to a five-level scale where 0=not at all, 1=a little bit, 2=somewhat, 3=quite a bit, and 4=very much. FACT-B total score = Physical Well-Being + Social/Family Well-Being + Emotional Well-Being + Functional Well-Being + Breast Cancer Subscale.

**Secondary: Percentage of participants with Treatment-Emergent Adverse Events (TEAEs; All Causalities)**

---

End point title	Percentage of participants with Treatment-Emergent Adverse Events (TEAEs; All Causalities)
-----------------	--

End point description:

An AE is any untoward medical occurrence in a clinical investigation patient administered a product or medical device; the event need not necessarily have a causal relationship with the treatment or usage. An SAE is any untoward medical occurrence at any dose that results in death; is life-threatening; requires hospitalization; results in persistent or significant disability or in congenital anomaly/birth defect. Severity will be graded by the National Cancer Institute Common Terminology Criteria for Adverse Events (NCI CTCAE), Version 4.0.

End point type	Secondary

occurrences (all)	31	82	
Urinary tract infection			
subjects affected / exposed	17 / 222 (7.66%)	52 / 444 (11.71%)	
occurrences (all)	34	75	
Metabolism and nutrition disorders			
Decreased appetite			

subjects affected / exposed	20 / 222 (9.01%)	65 / 444 (14.64%)	
occurrences (all)	23	91	

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
01 October 2013	Amendment 1: For France only: Clarification of inclusion criterion #10
03 January 2014	Amendment 2: Clarification of inclusion criterion #10 and 4; Clarification of exclusion criterion #1 and 17; Added preliminary results; Added recommendation to take palbociclib with a meal; Added prohibition to take proton-pump inhibitors; Added recommendation to use local antacids as well as H2-receptor antagonist; Editorial changes were done.
21 March 2014	Amendment 3: Added ophthalmic procedures; Included preliminary results from a preclinical ocular study with palbociclib in rats; Clarified that safety related assessments must continue if participants continue study treatment beyond RECIST-defined disease progression; Changes done to align with updated protocol template; Electrocardiogram: Definition of "evaluable" patient revised; Ocular Safety Assessment and Adverse Event Reporting: were added; sample size was revised; Section 15.1 and Appendix 6 FACT-B: updated; Appendix 8 was added.
18 September 2014	Amendment 4: Added prospective monitoring of hemoglobin A1c; Ocular Preclinical Date: Updated section to report emergent data findings from the 27-week rat toxicity study; updated study design to reflect Sponsor's decision to no longer require safety review by an internal oncology business unit safety data monitoring committee (IOBU-SDMC) for studies already monitored by an external data monitoring committee (E-DMC). Language related to cycle delay further defined to clearly state that any new cycle may only start if blinded study treatment can be resumed. Provided results from study A5481038 designed to investigate the effect of H2-receptor antagonists, proton pump inhibitors and local antacids; Editorial changes to differentiate between strong and moderate CYP3A inducers/inhibitors and to reflect current Sponsor protocol template.
02 December 2014	Amendment 5: Changed the interim analysis efficacy boundary from O'Brien-Fleming to Haybittle-Peto boundary to ensure that the study would only be stopped at the interim analysis if the primary analysis (PFS) results are statistically significant, and clinically meaningful and editorial changes to reflect current instructions for investigational product destruction at the end of the trial. Prohibited Medications: Strong/Moderate CYP3A inducers/inhibitors and proton-pump inhibitors are allowed for patients who permanently discontinue blinded therapy and continue on study with letrozole monotherapy only. Analysis of Primary Endpoint: Editorial change to clarify planned analyses.
07 April 2015	Amendment 6: Analysis Secondary Endpoints: Changes reflecting the collection of Patient Reported Outcome data during the post-progression follow-up period to assess potential impact of post-progression status on patient's quality of life and editorial changes to reflect current Sponsor's protocol template.
15 October 2015	Amendment 7 protocol language revise to reflect that collection of disease progression dates on subsequent anticancer therapy to better understand the potential influence of palbociclib response to subsequent anticancer therapies. Additional language was also added to clarify that the 7-day off treatment period in any given cycle should always be respected.

Notes:

### Interruptions (globally)

Were there any global interruptions to the trial? No

## Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

For Overall Survival: The patients continue to be followed for survival and the final OS analysis will be performed when 390 deaths have been reported. OS should not be reported at this time because the OS data is still being followed.

Notes:
