Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	26 October 2017
Is this the analysis of the primary completion data?	Yes
Primary completion date	31 August 2017
Global end of trial reached?	Yes
Global end of trial date	31 August 2017
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

To assess post-marketing immunogenicity of Optivate® by monitoring plasma inhibitor levels for at least 100 Exposure Days (EDs) for each subject.

Protection of trial subjects:

For each of the five recovery assessments the patients had to give blood samples a number of times over the course of 1 hour. Collection of blood samples may lead to bruising or tenderness at the site where blood is collected. Therefore, to minimise distress the subjects were offered a cannula which could be used to take repeated blood samples.

Background therapy:

There were no comparator tests or products used in this trial.

Evidence for comparator:

Not applicable.

Actual start date of recruitment	01 July 2014
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Poland: 2
Country: Number of subjects enrolled	Germany: 1
Country: Number of subjects enrolled	Colombia: 4
Worldwide total number of subjects	7
EEA total number of subjects	3

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	1

Adults (18-64 years)	6
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

First patient first visit: 21-Nov-2014

Last patient first visit: 02-Mar-2017

Last patient last visit: 31-Aug-2017

4 patients recruited in Colombia

2 patients recruited in Poland

1 patient recruited in Germany

Pre-assignment

Screening details:

Screening took place within 4 weeks before the Baseline Visit (V1). A three day wash-out period was required. A brief physical and medical examination was performed and the medical history recorded. Blood samples were taken for viral serology; CD4 count; to measure inhibitor status and FVIII recovery.

Period 1

Period 1 title	Screening period
Is this the baseline period?	No
Allocation method	Not applicable
Blinding used	Not blinded

Blinding implementation details:

Not applicable

Arms

Arm title	Screening
-----------	-----------

Arm description:

Following a 3 day washout period, eligible subjects provided a blood sample to test for FVIII inhibitors (pre-bolus only).

Subjects also underwent a recovery assessment at this visit using the subject's current FVIII concentrate (30 IU/kg dose).

Blood samples were collected at the following timepoints:

- pre-dose (if not already collected)
- 15 minutes post-infusion (+5 minutes [mins])
- 30 minutes post-infusion (+5 mins)
- 1 hour post-infusion (+10 mins)

Arm type	Experimental
Investigational medicinal product name	Current FVIII Product
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder and solvent for solution for injection/infusion
Routes of administration	Intravenous bolus use

Dosage and administration details:

Subjects underwent a recovery assessment at this visit using the subject's current FVIII concentrate (30 IU/kg dose).

Number of subjects in period 1	Screening
Started	7
Completed	7

Period 2

Period 2 title	Baseline(V1)/ Treatment period (V1-V4)
Is this the baseline period?	Yes ^[1]
Allocation method	Not applicable
Blinding used	Not blinded

Blinding implementation details:

Not applicable

Arms

Arm title	Optivate 500IU
Arm description: -	
Arm type	Experimental
Investigational medicinal product name	Optivate 500IU
Investigational medicinal product code	B02BD02
Other name	
Pharmaceutical forms	Concentrate and solvent for solution for infusion
Routes of administration	Intravenous bolus use

Dosage and administration details:

- Bolus dose study visits 1-4: 30 IU/kg

- Routine prophylaxis: 20-40 IU/kg to be administered 3 times a week for at least 100 exposure days.

- Preventative therapy: single dose of 20-40 IU/kg to be administered.

- Minor bleeds: 8-15 IU/kg (Repeated every 12 to 24 hours. At least 1 day, until the bleeding episode as indicated by pain is resolved or healing was achieved)

- More extensive haemarthrosis, muscle bleeding or haematoma: 12-23 IU/kg (Repeat infusion every 12 to 24 hours for 3 to 4 days or more until pain and acute disability are resolved).

- Life-threatening haemorrhages: 23-37IU/kg (Repeat infusion every 8 to 24 hours until threat resolved).

Notes:

[1] - Period 1 is not the baseline period. It is expected that period 1 will be the baseline period.

Justification: Period 1 is the screening period. Subjects must complete the screening period before entering Period 2(baseline period).

Number of subjects in period 2	Optivate 500IU
Started	7
Completed	6
Not completed	1
Adverse event, serious fatal	1

Period 3

Period 3 title	Follow-up period
Is this the baseline period?	No
Allocation method	Not applicable
Blinding used	Not blinded

Blinding implementation details:

Not applicable

Arms

Arm title	Follow-up period
------------------	------------------

Arm description:

Follow-up period was conducted by telephone call 28 days after the last Optivate® infusion to allow follow-up of any AEs.

Arm type	Experimental
Investigational medicinal product name	Optivate 500IU
Investigational medicinal product code	B02BD02
Other name	
Pharmaceutical forms	Concentrate and solvent for solution for infusion
Routes of administration	Intravenous bolus use

Dosage and administration details:

- Bolus dose study visits 1-4: 30 IU/kg

- Routine prophylaxis: 20-40 IU/kg to be administered 3 times a week for at least 100 exposure days.

- Preventative therapy: single dose of 20-40 IU/kg to be administered.

- Minor bleeds: 8-15 IU/kg (Repeated every 12 to 24 hours. At least 1 day, until the bleeding episode as indicated by pain is resolved or healing was achieved)

- More extensive haemarthrosis, muscle bleeding or haematoma: 12-23 IU/kg (Repeat infusion every 12 to 24 hours for 3 to 4 days or more until pain and acute disability are resolved).

- Life-threatening haemorrhages: 23-37IU/kg (Repeat infusion every 8 to 24 hours until threat resolved).

Number of subjects in period 3	Follow-up period
Started	6
Completed	6

Secondary: Optivate® Recovery Over Time (Recovery at 1 Exposure Day [ED, Visit 1], 10 to 15 EDs [Visit 2], 50 to 75 EDs, [Visit 3], and 100 EDs [Visit 4]) for the Protocol Population.

End point title	Optivate® Recovery Over Time (Recovery at 1 Exposure Day [ED, Visit 1], 10 to 15 EDs [Visit 2], 50 to 75 EDs, [Visit 3], and 100 EDs [Visit 4]) for the Protocol Population.
-----------------	--

End point description:

A recovery assessment was conducted at each study visit. Recovery assessments were only conducted after a 3-day washout period and when the subject was not actively bleeding.

At the Screening Visit, subjects who had completed a 3-day washout period and were not actively bleeding were dosed with 30 IU/kg of their prior FVIII concentrate. The dose was measured to the nearest 0.1 mL. Blood samples for the recovery assessment were to be collected at the following time points:

- Predose
- 15 minutes postinfusion (± 5 minutes).
- 30 minutes postinfusion (± 5 minutes).
- 1 hour postinfusion (± 10 minutes).

Actual times of sample collection were to be recorded in the CRF

At visits 1, 2, 3 and 4 subjects were dosed with 30 IU/kg of Optivate and blood samples for recovery assessments were taken at the same timepoints as specified above.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
02 December 2014	Update to responsible medical officer.
23 March 2015	Update to Responsible Medical Officer.
30 November 2015	<ul style="list-style-type: none">- Protocol to clarify that the end of trial will be when the 10th patient has completed their follow-up visit.- Third exclusion criterion updated to clarify and to be consistent with routine clinical practice and the patient information sheet that subjects will be excluded if they have symptomatic liver or renal disease. In addition, section updated to state that historical lab results for ALT and creatinine (within the last 12 months) would be acceptable instead of a new sample being taken at screening. If historical results are not available, then an ALT and creatinine sample is not required at screening as long as the patient is asymptomatic.- Product Presentation updated to state that a field for batch specific potency was not included on the approved product label in error. Protocol updated to provide clarification on where actual vial content can be established from i.e. certificate of analysis.- Dosage to treat breakthrough bleeds updated to clarify what dose may be taken in the event that a bleed occurs on the same day as the routine prophylactic dose.- Screening Procedures Before Dosing updated to state that all bleeds regardless of severity, from the past 12 months should be recorded in the eCRF.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
