

## Clinical trial results:

### **Efficacy and safety of semaglutide once-weekly versus exenatide ER 2.0 mg once-weekly as add-on to 1-2 oral antidiabetic drugs (OADs) in subjects with type 2 diabetes**

#### **Summary**

EudraCT number	2012-004826-92
Trial protocol	IT DE NL FI GR GB HR
Global end of trial date	13 July 2015

#### **Results information**

Result version number	v1 (current)
This version publication date	28 July 2016
First version publication date	28 July 2016

#### **Trial information**

##### **Trial identification**

Sponsor protocol code	NN9535-3624
-----------------------	-------------

##### **Additional study identifiers**

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT01885208
WHO universal trial number (UTN)	U1111-1135-8647

Notes:

##### **Sponsors**

Sponsor organisation name	Novo Nordisk A/S

Notes:

##### **Paediatric regulatory details**

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	10 May 2016
Is this the analysis of the primary completion data?	Yes
Primary completion date	13 July 2015
Global end of trial reached?	Yes
Global end of trial date	13 July 2015
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

To compare the effect of semaglutide 1.0 mg once-weekly versus exenatide extended release (ER) 2.0 mg once-weekly on glycaemic control after 56 weeks of treatment

Protection of trial subjects:

The trial was conducted in accordance with the Declaration of Helsinki, ICH Good Clinical Practice and FDA 21 CFR 312.50 and 56.

Background therapy:

The following compounds (1-2 OADs) were considered as background medication:

- Metformin
- Thiazolidinedione (TZD)
- Sulfonylureas (SU)

Metformin: doses  $\geq$  1500 mg or maximum tolerated dose. TZD and SU: doses  $\geq$  half of maximum dose allowed according to national label.

Subjects upon inclusion continued pre-trial background medication throughout the entire trial. The background medication were maintained at the stable, pre-trial dose and frequency during the whole treatment period unless rescue medication was needed or if the subject had unacceptable hypoglycaemia on a background of SUs in which case the dose of SU was reduced.

Evidence for comparator:

Not applicable

Actual start date of recruitment	02 December 2013
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Serbia: 57
Country: Number of subjects enrolled	Argentina: 72
Country: Number of subjects enrolled	Switzerland: 19
Country: Number of subjects enrolled	United States: 313
Country: Number of subjects enrolled	Netherlands: 40
Country: Number of subjects enrolled	United Kingdom: 39
Country: Number of subjects enrolled	Croatia: 49
Country: Number of subjects enrolled	Finland: 23
Country: Number of subjects enrolled	France: 45
Country: Number of subjects enrolled	Germany: 54
Country: Number of subjects enrolled	Greece: 39
Country: Number of subjects enrolled	Italy: 59

Worldwide total number of subjects	809
EEA total number of subjects	348

Notes:

<b>Subjects enrolled per age group</b>	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	614
From 65 to 84 years	195
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

The trial was conducted in 138 sites in 12 countries, Argentina: 4 sites; Croatia: 5 sites; Finland: 5 sites; France: 7 sites; Germany: 7 sites; Greece: 5 sites; Italy: 6 sites; Netherlands: 8 sites; Serbia: 5 sites; Switzerland: 5 sites; United Kingdom: 6 sites; and United States: 75 sites.

### Pre-assignment

Screening details:

Not applicable

### Period 1

Period 1 title	Overall study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Semaglutide 1.0 mg once-weekly

Arm description:

Subjects randomised to semaglutide followed a fixed dose-escalation regimen, starting with once-weekly doses of 0.25 mg for 4 weeks, then escalated to doses of 0.5 mg once weekly for 4 weeks, and finally escalated to 1.0 mg once weekly (maximum dose). Doses were not changed during the trial after the maintenance dose was reached.

Arm type	Experimental
Investigational medicinal product name	Semaglutide
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection in pre-filled injector
Routes of administration	Subcutaneous use

Dosage and administration details:

Semaglutide 1.34 mg/mL, solution for injection, 1.5 mL pre-filled PDS290 pen-injector, one test pen per subject was given at the screening visit to ensure subject's willingness and ability to self-inject. The test pen contained semaglutide placebo, solution for injection, 1.5 mL prefilled PDS290 pen-injector and was to be administered once. Subjects were instructed in administration of subcutaneous (s.c.) injection and the investigator documented whether direction for use (DFU) was given orally and/or in writing.

<b>Arm title</b>	Exenatide ER 2.0 mg once-weekly
------------------	---------------------------------

Arm description:

Subjects on exenatide ER 2.0 mg were treated with the same 2.0 mg dose throughout the trial.

Arm type	Active comparator
Investigational medicinal product name	Exenatide
Investigational medicinal product code	
Other name	Bydureon
Pharmaceutical forms	Powder and solvent for prolonged-release suspension for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Exenatide ER (Bydureon®), one vial of 2 mg exenatide extended-release for injectable suspension for s.c. injection, one pre-filled syringe of 0.65 mL solvent, one vial connector, and two injection needles (one spare) were given at the screening visit. Subjects were instructed in administration of s.c. injection and the investigator documented whether DFU was given orally and/or in writing.

<b>Number of subjects in period 1</b>	<b>Semaglutide 1.0 mg once-weekly</b>	<b>Exenatide ER 2.0 mg once-weekly</b>
Started	404	405
Premature discontinuation of treatment	82 <sup>[1]</sup>	85 <sup>[2]</sup>
Completed	374	369
Not completed	30	36
Not completed	30	36

---

**Notes:**

[1] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: This number represents only those participants who prematurely discontinued the treatment. However, subjects who prematurely discontinued treatment were allowed to continue participation in the trial.

[2] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: This number represents only those participants who prematurely discontinued the treatment. However, subjects who prematurely discontinued treatment were allowed to continue participation in the trial.

## Baseline characteristics

### Reporting groups

Reporting group title	Semaglutide 1.0 mg once-weekly
Reporting group description:	
Subjects randomised to semaglutide followed a fixed dose-escalation regimen, starting with once-weekly doses of 0.25 mg for 4 weeks, then escalated to doses of 0.5 mg once weekly for 4 weeks, and finally escalated to 1.0 mg once weekly (maximum dose). Doses were not changed during the trial after the maintenance dose was reached.	
Reporting group title	Exenatide ER 2.0 mg once-weekly
Reporting group description:	
Subjects on exenatide ER 2.0 mg were treated with the same 2.0 mg dose throughout the trial.	

Reporting group values	Semaglutide 1.0 mg once-weekly	Exenatide ER 2.0 mg once-weekly	Total
Number of subjects	404	405	809
Age categorical			
Units: Subjects			

Age continuous			
The number of subjects analysed in the semaglutide and exenatide arms was 404 and 405, respectively.			
Units: years			
arithmetic mean	56.4	56.7	
standard deviation	± 10.3	± 11.1	-
Gender categorical			
The number of subjects analysed in the semaglutide and exenatide arms was 404 and 405, respectively.			
Units: Subjects			
Female	185	177	362
Male	219	228	447
Glycated haemoglobin (HbA1c)			
The number of subjects analysed in the semaglutide and exenatide arms was 404 and 405, respectively.			
Units: Percentage of glycated haemoglobin			
arithmetic mean	8.36	8.33	
standard deviation	± 0.95	± 0.96	-
Body weight			
The number of subjects analysed in the semaglutide and exenatide arms was 404 and 405, respectively.			
Units: kilogram(s)			
arithmetic mean	96.21	95.37	
standard deviation	± 22.5	± 20.46	-
Fasting Plasma Glucose			
The number of subjects analysed in the semaglutide and exenatide arms was 383 and 384, respectively.			
Units: mg/dL			
arithmetic mean	190.5	187.5	
standard deviation	± 48.06	± 49.41	-
Systolic blood pressure			
The number of subjects analysed in the semaglutide and exenatide arms was 404 and 404, respectively.			
Units: mm Hg			
arithmetic mean	133.35	133.66	
standard deviation	± 14.87	± 14.25	-
Diastolic blood pressure			

The number of subjects analysed in the semaglutide and exenatide arms was 404 and 404, respectively.			
Units: mm Hg			
arithmetic mean	80.23	79.57	
standard deviation	± 8.67	± 8.8	-
Patient-reported outcome: Diabetes Treatment Satisfaction Questionnaire (DTSQ)			
The result presented is the 'Treatment Satisfaction' summary score, which is the sum of 6 of the 8 items of the DTSQs questionnaire. The number of subjects analysed in the semaglutide and exenatide arms was 403 and 405, respectively.			
Units: Units on a scale			
arithmetic mean	27.35	27.23	
standard deviation	± 6.55	± 6.62	-

## End points

### End points reporting groups

Reporting group title	Semaglutide 1.0 mg once-weekly
Reporting group description: Subjects randomised to semaglutide followed a fixed dose-escalation regimen, starting with once-weekly doses of 0.25 mg for 4 weeks, then escalated to doses of 0.5 mg once weekly for 4 weeks, and finally escalated to 1.0 mg once weekly (maximum dose). Doses were not changed during the trial after the maintenance dose was reached.	
Reporting group title	Exenatide ER 2.0 mg once-weekly
Reporting group description: Subjects on exenatide ER 2.0 mg were treated with the same 2.0 mg dose throughout the trial.	

### Primary: Change in HbA1c

End point title	Change in HbA1c
End point description: Change in HbA1c from baseline to week 56. The full analysis set (FAS) included all randomised subjects who had received at least one dose of randomised semaglutide 1.0 mg or exenatide ER 2.0 mg.	
End point type	Primary
End point timeframe: From baseline to week 56	

End point values	Semaglutide 1.0 mg once-weekly	Exenatide ER 2.0 mg once-weekly		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	404	405		
Units: Percentage of glycated haemoglobin				
least squares mean (standard error)	-1.54 (± 0.06)	-0.92 (± 0.06)		

### Statistical analyses

Statistical analysis title	Statistical analysis 1
Statistical analysis description: The post-baseline responses were analysed using a mixed model for repeated measurements with treatment and country as fixed factors and baseline value as covariate, all nested within visit.	
Comparison groups	Semaglutide 1.0 mg once-weekly v Exenatide ER 2.0 mg once-weekly

Number of subjects included in analysis	809
Analysis specification	Pre-specified
Analysis type	non-inferiority <sup>[1]</sup>
P-value	< 0.0001
Method	Mixed models analysis
Parameter estimate	Treatment difference
Point estimate	-0.62
Confidence interval	
level	95 %
sides	2-sided
lower limit	-0.8
upper limit	-0.44

Notes:

[1] - Non-inferiority was concluded if the upper limit of the two-sided 95% confidence interval for the estimated treatment difference between semaglutide 1.0 mg and exenatide ER 2.0 mg was below the pre-specified non-inferiority margin (0.3 %).

<b>Statistical analysis title</b>	Statistical analysis 2
Statistical analysis description:	
The post-baseline responses were analysed using a mixed model for repeated measurements with treatment and country as fixed factors and baseline value as covariate, all nested within visit.	
Comparison groups	Semaglutide 1.0 mg once-weekly v Exenatide ER 2.0 mg once-weekly
Number of subjects included in analysis	809
Analysis specification	Pre-specified
Analysis type	superiority <sup>[2]</sup>
P-value	< 0.0001
Method	Mixed models analysis
Parameter estimate	Treatment difference
Point estimate	-0.62
Confidence interval	
level	95 %
sides	2-sided
lower limit	-0.8
upper limit	-0.44

Notes:

[2] - Superiority was concluded if the upper limit of the two-sided 95% confidence interval for the estimated treatment difference between semaglutide 1.0 mg and exenatide ER 2.0 mg was below the pre-specified superiority margin (0 %).

## Statistical analyses

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

First day of exposure to trial product and until week 61

Adverse event reporting additional description:

The 'on-treatment' overview includes treatment-emergent adverse events with onset at or after the date of the first trial product dose and before or at the date of the last trial product dose plus 5 weeks plus the 7 days visit window for the end-of-treatment follow-up visit (=42 days).

Assessment type	Systematic

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
12 March 2014	Update of the hypoglycaemic definition and endpoint in this connection, rescue medication criteria, statistical analysis and other minor corrections.

Notes:

---

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

None reported
