

Clinical trial results:

A Randomized, Multicenter, Open-Label, Two-Arm, Phase III Neoadjuvant Study Evaluating Trastuzumab Emtansine Plus Pertuzumab Compared with Chemotherapy Plus Trastuzumab and Pertuzumab for Patients with HER2-Positive Breast Cancer

Summary

EudraCT number	2012-004879-38
Trial protocol	BE ES DE FR IE
Global end of trial date	29 May 2018

Results information

Result version number	v2 (current)
This version publication date	14 June 2019
First version publication date	19 December 2016
Version creation reason

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	29 May 2018
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	29 May 2018
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

A Study Evaluating Trastuzumab Emtansine Plus Pertuzumab Compared With Chemotherapy Plus Trastuzumab and Pertuzumab for Participants With Human Epidermal Growth Factor Receptor 2 (HER2)-Positive Breast Cancer

Protection of trial subjects:

All study subjects were required to read and sign an Informed Consent Form.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	25 June 2014
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Canada: 25
Country: Number of subjects enrolled	United States: 83
Country: Number of subjects enrolled	Korea, Republic of: 59
Country: Number of subjects enrolled	Russian Federation: 61
Country: Number of subjects enrolled	France: 27
Country: Number of subjects enrolled	Taiwan: 42
Country: Number of subjects enrolled	Ukraine: 5
Country: Number of subjects enrolled	Belgium: 30
Country: Number of subjects enrolled	Germany: 24
Country: Number of subjects enrolled	Spain: 88
Worldwide total number of subjects	444
EEA total number of subjects	169

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0

Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	398
From 65 to 84 years	46
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

A total of 574 participants were screened at 65 sites in 10 countries, of which 444 participants were randomized in two arms: Trastuzumab (TCH) + Pertuzumab (P) (Arm A) and Trastuzumab Emtansine (TDM1) + P (Arm B)

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	TCH + P

Arm description:

Participants received pertuzumab 840 milligrams (mg) (loading dose) and 420 mg (maintenance dose) intravenous (IV) infusion, trastuzumab 8 milligrams per kilogram (mg/kg) (loading dose) and 6 mg/kg (maintenance dose) IV infusion, docetaxel 75 milligrams per square meter (mg/m²) IV infusion and carboplatin at a dose to achieve an area under the curve (AUC) of 6 milligrams per milliliter* minute (mg/mL*min) IV infusion every 3 weeks (q3w) for 6 cycles in neoadjuvant period. Participants received pertuzumab 840 mg (loading dose) and 420 mg (maintenance dose) IV infusion followed by trastuzumab 8 mg/kg (loading dose) and 6 mg/kg (maintenance dose) IV infusion q3w for rest of the cycles (12 cycles) in adjuvant period (up to a total of 18 cycles).

Arm type	Experimental
Investigational medicinal product name	Carboplatin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate and solvent for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Carboplatin IV infusion at a dose to achieve an AUC of 6 mg*min/mL q3w

Investigational medicinal product name	Pertuzumab
Investigational medicinal product code	
Other name	Perjeta®, RO4368451
Pharmaceutical forms	Concentrate and solvent for concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Pertuzumab 840 mg (loading dose); and 420 mg (maintenance dose) IV infusion q3w

Investigational medicinal product name	Trastuzumab
Investigational medicinal product code	
Other name	Herceptin®
Pharmaceutical forms	Concentrate and solvent for concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Trastuzumab 8 mg/kg (loading dose); and 6 mg/kg (maintenance dose) IV infusion q3w

Investigational medicinal product name	Docetaxel
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate and solvent for concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Docetaxel 75 mg/m² IV infusion q3w

Arm title	T-DM1 + P
------------------	-----------

Arm description:

Participants received pertuzumab 840 mg (loading dose) and 420 mg (maintenance dose) IV infusion followed by trastuzumab emtansine 3.6 mg/kg IV infusion q3w for a total of 18 cycles (6 cycles of neoadjuvant period and 12 cycles of adjuvant period).

Arm type	Experimental
Investigational medicinal product name	Trastuzumab Emtansine
Investigational medicinal product code	
Other name	Kadcyla®, RO5304020
Pharmaceutical forms	Concentrate and solvent for concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Trastuzumab Emtansine 3.6 mg/kg IV infusion q3w

Investigational medicinal product name	Pertuzumab
Investigational medicinal product code	
Other name	Perjeta®, RO4368451
Pharmaceutical forms	Concentrate and solvent for concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Pertuzumab 840 mg (loading dose); and 420 mg (maintenance dose) IV infusion q3w

Number of subjects in period 1	TCH + P	T-DM1 + P
Started	221	223
Completed	196	189
Not completed	25	34
Adverse event, serious fatal	5	6
Consent withdrawn by subject	14	18
Unspecified	2	2
Lost to follow-up	4	8

Baseline characteristics

Primary: Percentage of Subjects With Total Pathological Complete Response (tpCR) Assessed Based on Tumor Samples

End point title	Percentage of Subjects With Total Pathological Complete Response (tpCR) Assessed Based on Tumor Samples
End point description: tpCR was assessed by local pathology review on samples taken at surgery following completion of neoadjuvant therapy. tpCR was defined as the absence of any residual invasive cancer on hematoxylin and eosin evaluation of the resected breast specimen and all sampled ipsilateral lymph nodes (that is [i.e.], ypT0/is, ypN0 in the American Joint Committee on Cancer [AJCC] staging system, 7th edition). Percentage of subjects with tpCR was reported.	
End point type	Primary
End point timeframe: Pre-surgery (within 6 weeks after neoadjuvant therapy; up to approximately 6 months)	

End point values	TCH + P	T-DM1 + P		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	221	223		
Units: Percentage of Subjects				
number (confidence interval 95%)	56.1 (49.29 to 62.76)	44.4 (37.76 to 51.18)		

Statistical analyses

Statistical analysis title	tpCR Analysis
Statistical analysis description: 95% CI for the difference in tPCR rates between treatment arms was calculated using normal approximation.	
Comparison groups	TCH + P v T-DM1 + P

Number of subjects included in analysis	444
Analysis specification	Pre-specified
Analysis type	
P-value	= 0.0126 ^[1]
Method	Cochran-Mantel-Haenszel Chi-Square
Parameter estimate	Difference in tpCR rate
Point estimate	-11.71
Confidence interval	
level	95 %
sides	2-sided
lower limit	-20.95
upper limit	-2.48

Notes:

[1] - Threshold for significance at 5%

Secondary: Percentage of Subjects Who Received Breast-Conserving Surgery (BCS)

End point title	Percentage of Subjects Who Received Breast-Conserving Surgery (BCS)
-----------------	---

End point description:

BCS rate was defined as the percentage of subjects who achieve BCS out of the ITT population of subjects without inflammatory breast cancer.

End point type	Secondary
----------------	-----------

End point timeframe:

Surgery performed after completion of neoadjuvant therapy (approximately 6 months after neoadjuvant period)

End point values	TCH + P	T-DM1 + P		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	213	218		
Units: Percentage of Subjects				
number (confidence interval 95%)	52.6 (45.65 to 59.45)	41.7 (35.12 to 48.33)		

Statistical analyses

Statistical analysis title	BCS Analysis
----------------------------	--------------

Statistical analysis description:

95% CI for the difference in BCS rate between treatment arms was calculated using normal approximation.

Comparison groups	T-DM1 + P v TCH + P
Number of subjects included in analysis	431
Analysis specification	Pre-specified
Analysis type	
P-value	= 0.0228
Method	Cochran-Mantel-Haenszel Chi-square Test
Parameter estimate	Difference in BCS rate
Point estimate	-10.84

Confidence interval	
level	95 %
sides	2-sided
lower limit	-20.21
upper limit	-1.47

Secondary: Percentage of Subjects With Selected Adverse Events (AEs)

End point title	Percentage of Subjects With Selected Adverse Events (AEs)
End point description: Selected AEs included hepatotoxicity, pulmonary toxicity, cardiac dysfunction, neutropenia, thrombocytopenia, peripheral neuropathy, hemorrhage, infusion related reaction (IRR)/hypersensitivity, IRR/Hypersensitivity symptoms, rash, diarrhea and mucositis. An AE was defined as any untoward medical occurrence in a clinical investigation participant administered a pharmaceutical product, regardless of causal attribution.	
End point type	Secondary
End point timeframe: Baseline to end of study (approximately 47 months)	

End point values	TCH + P	T-DM1 + P		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	219	223		
Units: Percentage of Subjects				
number (not applicable)				
Hepatotoxicity	14.2	39.0		
Pulmonary Toxicity	0.9	4.9		
Cardiac Dysfunction	4.6	1.3		
Neutropenia	39.7	8.1		
Thrombocytopenia	22.8	17.9		
Peripheral Neuropathy	47.5	28.7

upper limit	-15.19

Secondary: Time to Clinically Meaningful Deterioration in GHS/QoL Score

End point title	Time to Clinically Meaningful Deterioration in GHS/QoL Score
-----------------	--

End point description:

Participants rated their quality of life (global health status) on EORTC QLQ C-30, with total scores ranging from 0 (worst) to 100 (best); where higher score indicates better quality of life. Time to deterioration was defined as the time from baseline to first 10-point (or greater) decrease as measured by GHS/QoL. All valid GHS/QoL questionnaires of the neoadjuvant phase including surgery were used. Participants without deterioration were censored at the time of completing the last GHS/QoL plus 1 day. Median time to deterioration was estimated with Kaplan-Meier method. The 95% confidence interval (CI) for the median was computed using the method of Brookmeyer and Crowley.

End point type	Secondary

Reporting group description:

Participants received pertuzumab 840 milligrams (mg) (loading dose) and 420 mg (maintenance dose) intravenous (IV) infusion, trastuzumab 8 milligrams per kilogram (mg/kg) (loading dose) and 6 mg/kg (maintenance dose) IV infusion, docetaxel 75 milligrams per square meter (mg/m²) IV infusion and carboplatin at a dose to achieve an area under the curve (AUC) of 6 milligrams per milliliter* minute (mg/mL*min) IV infusion every 3 weeks (q3w) for 6 cycles in neoadjuvant period. Participants received pertuzumab 840 mg (loading dose) and 420 mg (maintenance dose) IV infusion followed by trastuzumab 8 mg/kg (loading dose) and 6 mg/kg (maintenance dose) IV infusion q3w for rest of the cycles (12 cycles) in adjuvant period (up to a total of 18 cycles).

Reporting group title	T-DM1 + P
-----------------------	-----------

Reporting group description:

Participants received pertuzumab 840 mg (loading dose) and 420 mg (maintenance dose) IV infusion followed by trastuzumab emtansine 3.6 mg/kg IV infusion q3w for a total of 18 cycles (6 cycles of neoadjuvant period and 12 cycles of adjuvant period).

Serious adverse events	TCH + P	T-DM1 + P

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
21 September 2014	Wording regarding the timing between neoadjuvant treatment and surgery was aligned in the protocol synopsis. The Investigational Medicinal Product was updated to provide guidance to refer to national prescribing information for contraindications, adverse reactions, warnings, and precautions for docetaxel and carboplatin. The inclusion and exclusion criteria was updated. The study schema was updated. Language in the Permitted Therapy section was updated. Language was updated in the section with patients receiving optional adjuvant chemotherapy. Language regarding post-study adverse events reporting was updated. Language regarding pulmonary toxicity was clarified. Information regarding potential neurotoxicity was updated and a section on extravasation was added. Clarifications were updated regarding dose modifications/delays in response to trastuzumab emtansine-specific adverse events. Appendix 11 was added to provide guidance on carboplatin dosing for patients for whom the isotope dilution mass spectrometry method of serum creatine measurement is used.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
