

## Clinical trial results:

### RITUXILUP - An open label randomised multicentre controlled trial of RITUXImab and mycophenolate mofetil (MMF) without oral steroids for the treatment of LUPus nephritis

#### Summary

EudraCT number	2012-004893-25
Trial protocol	GB
Global end of trial date	13 December 2017

#### Results information

Result version number	v1 (current)
This version publication date	02 June 2019
First version publication date	02 June 2019

#### Trial information

##### Trial identification

Sponsor protocol code	CRO2035
-----------------------	---------

##### Additional study identifiers

ISRCTN number	ISRCTN84054592
ClinicalTrials.gov id (NCT number)	NCT01773616
WHO universal trial number (UTN)	-

Notes:

#### Sponsors

Sponsor organisation name	Imperial College London; Joint Research Compliance Office
Sponsor organisation address	Room 221, Medical School Building, St Mary's Campus, Norfolk Place, London, United Kingdom, W2 1PG
Public contact	Professor Liz Lightstone, Imperial College London, l.lightstone@imperial.ac.uk
Scientific contact	Professor Liz Lightstone, Imperial College London, l.lightstone@imperial.ac.uk

Notes:

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

---

**Results analysis stage**

---

Analysis stage	Final
Date of interim/final analysis	17 May 2018
Is this the analysis of the primary completion data?	Yes
Primary completion date	16 October 2017
Global end of trial reached?	Yes
Global end of trial date	13 December 2017
Was the trial ended prematurely?	Yes

Notes:

---

**General information about the trial**

---

Main objective of the trial:

The trial aimed to demonstrate that a regimen free of oral steroids but with rituximab and MMF is non-inferior to a regimen based on oral steroids and MMF in achieving the primary outcome of complete renal response at one year.

---

Protection of trial subjects:

Data Monitoring Committee

Pharmacovigilance

On-site and remote monitoring including source data verification

Detailed informed consent process

---

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	15 May 2014
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

---

**Population of trial subjects**

---

**Subjects enrolled per country**

---

Country: Number of subjects enrolled	United Kingdom: 25
Worldwide total number of subjects	25
EEA total number of subjects	25

Notes:

---

**Subjects enrolled per age group**

---

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	1
Adults (18-64 years)	24
From 65 to 84 years	0

85 years and over	0
-------------------	---

## Subject disposition

### Recruitment

Recruitment details:

Potential patients were identified in clinics and screened against the inclusion and exclusion criteria for the study. Recruitment took place across 11 sites in the UK from May 2015 to April 2017. Recruitment to the trial was halted prematurely in April 2017 at N=25, following withdrawal of funding due to slower than anticipated recruitment.

### Pre-assignment

Screening details:

Patients were screened for eligibility according to the trial inclusion and exclusion criteria.

### Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Blinding implementation details:

Not applicable - this is an open label trial

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Control

Arm description:

Control arm / Standard of care:

1. Mycophenolate mofetil
2. Methyl prednisolone
3. Oral prednisolone

Arm type	Active comparator
Investigational medicinal product name	Mycophenolate Mofetil (MMF)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Dosing in adults: start MMF 500mg bd and increase weekly by 250mg bd to a maximum dose of 1g bd if 60kg or less and 1.5g bd if >60kg. Within these guidelines the maximum dose will be titrated against white blood cells, tolerability or trough mycophenolic acid levels where available but should be no less than 500mg bd. At 6 months, if patients have responded, as defined by stabilisation of serum creatinine, and proteinuria non nephrotic and >50% reduction from baseline, the maximum dose of MMF will be reduced to 1g bd in those on higher dose initially.

Dosing in children aged 12-18: Commence MMF dosing at 600mg/m<sup>2</sup> for 3 days up to a maximum of 1g and then increased to 600mg/m<sup>2</sup> bd.

Investigational medicinal product name	Oral prednisolone
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Oral prednisolone commencing at 0.5mg/kg/day (max 60mg/day, minimum 20mg/day) tapered thus:  
o From week 2: if commencing on >45mg/day, decreased by 10mg/day every 2 weeks to 40mg/day followed by decrease by 5mg/day every 2 weeks until down to 20mg/day if clinical status permits.  
o From week 2: if commencing on 45mg/day or less, decreased by 5mg/day every 2 weeks until down

to 20mg/day if clinical status permits.

o However, the dose should be no more than 20mg/day at 12 -13 weeks.

o Once down to a dose of 20mg/day, this should be maintained for 4 weeks.

o Thereafter, reduced by 2.5mg/day every week down to 10mg/day if clinical status permits.

o However, the dose should be no more than 10mg/day once daily by 26 weeks at the latest

o Once down to a dose of 10mg/day, this should be maintained for a minimum of 6 weeks.

o Thereafter, the steroid dose can be tapered according to clinical status and at a rate determined by clinician.

Investigational medicinal product name	Methyl prednisolone
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

500mg Methyl prednisolone IV at Infusion 1/Visit 1 and Infusion 2/Visit 3. If patients have received methyl prednisolone within the 4 weeks prior to randomisation, the dose will be modified to ensure maximum methyl prednisolone given will not exceed 3g in total.

<b>Arm title</b>	Rituximab
------------------	-----------

Arm description:

Intervention arm:

1. Rituximab
2. Mycophenolate mofetil
3. Methyl prednisolone

Arm type	Experimental
Investigational medicinal product name	Mycophenolate Mofetil (MMF)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Dosing in adults: start MMF 500mg bd and increase weekly by 250mg bd to a maximum dose of 1g bd if 60kg or less and 1.5g bd if >60kg. Within these guidelines the maximum dose will be titrated against white blood cells, tolerability or trough mycophenolic acid levels where available but should be no less than 500mg bd. At 6 months, if patients have responded, as defined by stabilisation of serum creatinine, and proteinuria non nephrotic and >50% reduction from baseline, the maximum dose of MMF will be reduced to 1g bd in those on higher dose initially.

Dosing in children aged 12-18: Commence MMF dosing at 600mg/m<sup>2</sup> for 3 days up to a maximum of 1g and then increased to 600mg/m<sup>2</sup> bd.

Investigational medicinal product name	Rituximab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Rituximab 1g infusion at Infusion 1/Visit 1 and Infusion 2/Visit 3 (The dose in children will be 750mg/m<sup>2</sup> (maximum 1g) at Infusion 1/Visit 1 and Infusion 2/Visit 3 ). Concomitant IV or oral antihistamines and IV or oral paracetamol will be administered prior to administration of Rituximab.

Investigational medicinal product name	Methyl prednisolone
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

500mg Methyl prednisolone IV at Infusion 1/Visit 1 and Infusion 2/Visit 3. If patients have received methyl prednisolone within the 4 weeks prior to randomisation, the dose will be modified to ensure maximum methyl prednisolone given will not exceed 3g in total.

<b>Number of subjects in period 1</b>	Control	Rituximab
Started	12	13
Completed	9	11
Not completed	3	2
Consent withdrawn by subject	2	1
Non-compliance with protocol visits	1	-
Lack of efficacy	-	1

## End points

### End points reporting groups

Reporting group title	Control
Reporting group description:	
Control arm / Standard of care:	
1. Mycophenolate mofetil	
2. Methyl prednisolone	
3. Oral prednisolone	
Reporting group title	Rituximab
Reporting group description:	
Intervention arm:	
1. Rituximab	
2. Mycophenolate mofetil	
3. Methyl prednisolone	

### Primary: Complete renal response (CR) at week 52 (or closest timepoint)

End point title	Complete renal response (CR) at week 52 (or closest timepoint)
End point description:	
CR is defined as:	
- uPCR $\leq 50$ mg/mmol ( $= < 0.5$ mg/mg) in a spot urine	
AND	
- eGFR $\geq 60$ ml/min, or if $< 60$ ml/min at screening, not fallen by $> 20\%$ compared to screening/randomisation (whichever worse)	
AND	
- In the rituximab arm without the need to prescribe oral steroids within 1 year (beyond the first 8 wks depending on duration of prior steroids), except for 1 course of oral prednisolone max 30mg for a maximum of 14 d OR one intramuscular, one intravenous injection or two intra-articular injections of steroids, each maximum 120mg methylprednisolone or equivalent (in addition to the planned IV methyl prednisolone in the protocol)	
OR	
- in the steroid arm without the need for additional steroids over and above the prescribed taper, except for one course of oral prednisolone maximum 30mg for a maximum of 14d OR one intramuscular, one intravenous injection or two intra-articular injections of steroids, maximum 120mg methylprednisolone or equivalent (in addition to planned IV methyl pred)	
End point type	Primary
End point timeframe:	
Week 52 or closest visit	

End point values	Control	Rituximab		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	12	13		
Units: N(%)				
CR	4	6		
Non-CR	8	7		

## Statistical analyses

<b>Statistical analysis title</b>	Primary outcome analysis
Comparison groups	Control v Rituximab
Number of subjects included in analysis	25
Analysis specification	Pre-specified
Analysis type	non-inferiority
Method	Regression, Logistic
Parameter estimate	Risk ratio (RR)
Point estimate	1.38
Confidence interval	
level	95 %
sides	2-sided
lower limit	0.51
upper limit	3.74

## Secondary: Partial response (PR) at week 52 or closest visit

End point title	Partial response (PR) at week 52 or closest visit
End point description: The proportion of patients achieving partial renal response (PR) at week 52 where PR is defined as: - eGFR - no more than a 20% decrease from the baseline value, AND - if not nephrotic at baseline (urine PCR <300mg/mmol (3mg/mg)), 50% improvement in spot urine PCR OR - if nephrotic at baseline (urine PCR >300mg/mmol (3mg/mg)), 50% improvement in spot urine PCR AND urine PCR <300mg/mmol	
End point type	Secondary
End point timeframe: 52 weeks or closest visit	

<b>End point values</b>	Control	Rituximab

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
18 April 2014	Version 1.1: first approved version - minor changes following Ethics Committee review; clarification about informing patients' GPs
06 March 2016	V2.2: clarification regarding MMF recommendations, change of prior steroid use from 4 weeks to 12 weeks (inclusion criteria), increase for allowed methyl prednisolone pre-trial from 1g to 2g (inclusion criteria), clarifications on study assessments including timing of standard care visits, clarifications regarding trial sample handling, inclusion of definition of Adverse Event of Special Interest, clarification for reporting of pregnancy and Adverse Events, clarifications regarding steroid taper (if oral steroids taken before trial entry)
30 June 2017	V 3.0: administrative changes, amendment to final study visit following decision to terminate trial early – patients to be followed up for a minimum of 6 months and last study visit to be modified to include annual visit procedures, clarification regarding definition of withdrawal.

Notes:

### Interruptions (globally)

Were there any global interruptions to the trial? Yes

Date	Interruption	Restart date
13 September 2016	<p>The RITUXILUP study was temporarily on halt as a reassessment of study feasibility was required. The Study Team entered into discussion with the funder (ARUK) regarding how to proceed in order to reach the required recruitment target and to answer the current relevant question.</p> <p>Those who were randomised prior to the halt (n=18) continued to be followed up as per the study protocol.</p>	11 October 2017
27 March 2017	The RITUXILUP study received an official notification from Arthritis Research UK (the Funder) that their financial support to complete trial recruitment "to target" will be stopped and with the Sponsor's agreement, recruitment to the trial has been suspended. The funder has reviewed the Study's progress in detail and concluded that the target number of patients cannot be recruited within a realistic time period that is considered value for money.	-
