

## Clinical trial results:

**A randomized, double-blind, 104-weeks treatment study to evaluate the efficacy, safety, tolerability and pharmacokinetics of telbivudine oral solution and tablets in children and adolescents with compensated HBeAg-positive and negative chronic hepatitis B virus infection**

### Summary

EudraCT number	2012-004942-14
Trial protocol	GB GR BG
Global end of trial date	09 January 2019

### Results information

Result version number	v1
This version publication date	24 July 2019
First version publication date	24 July 2019

### Trial information

#### Trial identification

Sponsor protocol code	CLDT600A2306
-----------------------	--------------

#### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT02058108
WHO universal trial number (UTN)	-

### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-000065-PIP01-07
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	09 January 2019
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	09 January 2019
Was the trial ended prematurely?	Yes

Notes:

## General information about the trial

Main objective of the trial:

The primary objective was to demonstrate the antiviral efficacy of telbivudine compared to placebo in pediatric patients by determining the percentage of patients achieving serum HBV DNA level of <300 copies/mL (51 IU/mL) at Week 24.

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and the International Conference on Harmonization (ICH) Good Clinical Practice (GCP) guidelines. All the local regulatory requirements pertinent to safety of trial subjects were also followed during the conduct of the trial.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	31 October 2014
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Bulgaria: 3
Country: Number of subjects enrolled	Greece: 1
Country: Number of subjects enrolled	Israel: 2
Country: Number of subjects enrolled	Korea, Republic of: 1
Country: Number of subjects enrolled	Romania: 18
Country: Number of subjects enrolled	Turkey: 17
Country: Number of subjects enrolled	Ukraine: 11
Worldwide total number of subjects	53
EEA total number of subjects	22

Notes:

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23	0

months)	
Children (2-11 years)	29
Adolescents (12-17 years)	24
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

This study was conducted in 20 centers in 7 countries: Bulgaria (2), Greece (1), Israel (2), Republic of Korea (1), Romania (5), Turkey (4) and Ukraine (5 sites).

### Pre-assignment

Screening details:

Patients were stratified by age group (2 to < 6 years, 6 to <12 years and 12 to <18 years) and HBV DNA level (low and high). At the baseline visit, eligible patients were randomized in a 24-week double blind period to telbivudine or placebo in a ratio 5:1. At Week 24 (visit 6), all patients were unblinded and HBV DNA level were assessed.

### Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Carer, Assessor

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Telbivudine

Arm description:

Patients of any age and weight < 30kg: telbivudine oral solution (20 mg/mL): 20 mg/kg up to 600 mg q.d corresponding to weight (kg) x1mL, p.o. once daily Patients < 12 years old and weight ≥ 30kg: telbivudine oral solution (20mg/mL), 600 mg/day corresponding to 30 mL p.o. once daily Patients ≥ 12 years old and weight ≥ 30kg: telbivudine film-coated tablet, 600 mg/day, corresponding to 1 tablet p.o. once daily

Arm type	Experimental
Investigational medicinal product name	Telbivudine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Oral solution
Routes of administration	Oral use

Dosage and administration details:

Patients of any age and weight < 30kg: telbivudine oral solution (20 mg/mL): 20 mg/kg up to 600 mg q.d corresponding to weight (kg) x1mL, p.o. once daily Patients < 12 years old and weight ≥ 30kg: telbivudine oral solution (20mg/mL), 600 mg/day corresponding to 30 mL p.o. once daily

Investigational medicinal product name	Telbivudine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Patients ≥ 12 years old and weight ≥ 30kg: telbivudine film-coated tablet, 600 mg/day, corresponding to 1 tablet p.o. once daily

<b>Arm title</b>	Placebo
------------------	---------

Arm description:

Patients of any age and weight < 30kg: placebo oral solution corresponding to weight (kg) x1mL, p.o. once daily Patients < 12 years old and weight ≥ 30kg: placebo oral solution corresponding to 30 mL p.o. once daily Patients ≥ 12 years old and weight ≥ 30kg: placebo tablet, corresponding to 1 tablet p.o. once daily. Placebo randomized patients were offered optional telbivudine administration at week 24.

Arm type	Placebo
----------	---------

Investigational medicinal product name	Placebo

Participants with alanine aminotransferase (ALT) - Multiples of upper limits of normal (ULN)			
Serum ALT normalization is an important clinically relevant efficacy endpoint. Elevated serum ALT levels are thought to reflect underlying hepatitis disease activity (i.e. active liver inflammation). Correspondingly, ALT normalization is an accepted therapeutic goal in hepatitis studies as it is thought to reflect a substantial reduction in hepatic disease activity. Measurement at baseline.			
Units: Subjects			

< 1 × ULN	4	3	7

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

Adverse events and serious adverse events were collected for the maximum actual duration of treatment exposure and follow up for a participant per the protocol for approximately 112 weeks.

Adverse event reporting additional description:

AEs occurring in patients in the Initial Placebo group were assigned to either Placebo or Telbivudine (LdT) treatment based on their onset date:

- Placebo: AEs with onset before the first date of LdT treatment after switching+patients who did not switch to LdT
- LdT: AEs with onset date on or after the first date of LdT treatment after switching

Assessment type	Systematic

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
05 March 2015	<p>Amendment 1 was issued after the inclusion of 35.3% of patients and introduced the following changes:</p> <ul style="list-style-type: none"><li>• Update inclusion criteria for children enrolled in the Republic of South Korea by specified age groups to align with the availability of alternative treatments for CHB infection for the specified age groups (which eliminated children 12 years of age or older from study participation in South Korea).</li><li>• Clarify serum ALT criteria for study inclusion. Eliminate the inclusion criterion for patients with normal ALT levels to substantiate moderate to severe hepatic inflammation by histology report or FibroScan.</li><li>• Eliminate acute infection with herpes simplex virus (HSV) as exclusion criteria.</li><li>• Eliminate duplication of list of viral causes of infectious hepatitis (Exclusion Criteria 7 and 12).</li><li>• Clarify the management of patient discontinuation and premature patient withdrawal.</li><li>• Remove the Serum ALT requirements for eligibility criteria for placebo treated patients to start telbivudine treatment at Week 28.</li><li>• Reduce the number of assays to rule out other viral infections with a potential to cause hepatitis in order to align the protocol with current diagnostic practices and to reduce required blood volume for diagnostic tests.</li><li>• Extend screening period up to 10 weeks in cases of operational or administrative issues.</li></ul>
22 November 2016	<p>Amendment 2 was issued at that time enrolment was already placed on temporary halt. It added clarifications on the role of Data Monitoring Committee (DMC) and add clarifying wording for the timing of interim analyses.</p> <p>Amendment stated while planned DMC convened regularly to review safety analyses, committee could also request and review additional safety and /or efficacy analyses where appropriate.</p>

Notes:

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Due to early termination of the study and limited number of enrolled patients on track to complete 52 weeks of participation (8 patients overall), the long term efficacy endpoints for Week 52 and Week 104, were not analyzed.

Notes:
