

Clinical trial results:

Efficacy and safety of liraglutide versus lixisenatide as add-on to metformin in subjects with type 2 diabetes.

Due to the EudraCT – Results system being out of service between 31 July 2015 and 12 January 2016, these results have been published in compliance with revised timelines.

Summary

EudraCT number	2012-004984-27
Trial protocol	LT FI GB CZ DE HU LV FR
Global end of trial date	19 November 2014

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	21 May 2015
Is this the analysis of the primary completion data?	Yes
Primary completion date	19 November 2014
Global end of trial reached?	Yes
Global end of trial date	19 November 2014
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To compare the effect of liraglutide versus lixisenatide as add-on to metformin on glycaemic control after 26 weeks treatment in subjects with type 2 diabetes mellitus (T2DM)

Protection of trial subjects:

The trial was conducted in accordance with the Declaration of Helsinki (Seoul, Oct 2008) and ICH Good Clinical Practice (01-May-1996) and 21 CFR 312.120.

Background therapy:

Stable dose of Metformin (maximum tolerated dose, equal to or above 1000 mg/day and up to 3000 mg/day).

Evidence for comparator:

Not applicable

Actual start date of recruitment	24 October 2013
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Czech Republic: 59
Country: Number of subjects enrolled	Finland: 8
Country: Number of subjects enrolled	France: 30
Country: Number of subjects enrolled	Germany: 49
Country: Number of subjects enrolled	Hungary: 56
Country: Number of subjects enrolled	Italy: 40
Country: Number of subjects enrolled	Latvia: 48
Country: Number of subjects enrolled	Lithuania: 34
Country: Number of subjects enrolled	United Kingdom: 80
Worldwide total number of subjects	404
EEA total number of subjects	404

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37	0

wk	
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	321
From 65 to 84 years	82
85 years and over	1

Subject disposition

Recruitment

Recruitment details:

The trial was conducted at 56 sites in 9 countries as follows:

Czech Republic: 5 sites; Finland: 4 sites; France: 6 sites; Germany: 8 sites; Hungary: 6 sites; Italy: 5 sites; Latvia: 6 sites; Lithuania: 5 sites; UK: 11 sites.

Pre-assignment

Screening details:

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Blinding implementation details:

Not Applicable

Arms

Are arms mutually exclusive?	Yes
Arm title	Liraglutide

Arm description:

Liraglutide was administered subcutaneously (s.c.; under the skin) once daily in addition to the subject's stable pre-trial metformin (maximum tolerated dose, equal to or above 1000 mg/day and up to 3000 mg/day) for a total duration of 26 weeks. Starting dose of liraglutide was 0.6 mg/day, with weekly dose escalations of 0.6 mg/day until the maintenance dose of 1.8 mg/day was reached.

Arm type	Experimental
Investigational medicinal product name	Liraglutide
Investigational medicinal product code	
Other name	Victoza®
Pharmaceutical forms	Solution for injection in pre-filled pen
Routes of administration	Subcutaneous use

Dosage and administration details:

Liraglutide was to be injected subcutaneously in the thigh, upper arm (deltoid region) or abdomen. The injection site did not have to be consistent throughout the trial. Injections could be done at any time of the day irrespective of meals. It was recommended that the time of injection was consistent throughout the trial. Subjects were instructed to perform an air shot before the first use of a new pre-filled pen. Subjects were to follow a dose escalation. Liraglutide was to be initiated with a starting dose of 0.6 mg/day, with subsequent weekly dose escalations of 0.6 mg/day in accordance with the approved dose escalation for liraglutide until the maintenance dose of 1.8 mg/day was reached. Escalation from 0.6 mg/day to 1.8 mg/day could be extended by 7 days if subjects did not tolerate an increase in dose during dose escalation according to the investigator's opinion. The liraglutide dose of 1.8 mg/day was to remain unchanged throughout the remainder of the trial.

Arm title	Lixisenatide
------------------	--------------

Arm description:

Lixisenatide was administered s.c. once daily, within the hour prior to the first meal of the day or the evening meal in addition to subject's stable pre-trial metformin (maximum tolerated dose, equal to or above 1000mg/day and up to 3000mg/day) for a total duration of 26 weeks. Starting dose of lixisenatide was 10 µg once daily, the dose was escalated to 20 µg once daily from day 15 after randomisation.

Arm type	Active comparator
----------	-------------------

Investigational medicinal product name	Lixisenatide
Investigational medicinal product code	
Other name	Lyxumia®
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Lixisenatide was to be administered once daily, within the hour prior to the first meal of the day or the evening meal, in accordance with the approved SmPC (Summary of Product Characteristics) at the time of trial initiation and recruitment of subjects. Dose escalation for lixisenatide was according to the approved label. Following a starting dose of 10 µg, the dose was to be escalated to 20 µg from day 15 after randomisation. If a dose of lixisenatide was missed, it was to be injected within the hour prior to the next meal. Injections were to be done subcutaneously in the thigh, abdomen or upper arm. Trial drug medication with lixisenatide after dose escalation was to be continued at a fixed dose throughout the trial.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
29 July 2013	1.Changing inclusion criteria 3 and 4 according to ADA and EASD position statement: defining maximum tolerated dose for metformin and increasing HbA1c lower limit from 7.0% to 7.5% 2.Define "true abstinence" in exclusion criterion 3 3.Adding pancreatitis as MESI

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.
