

Clinical trial results:

A Phase III, randomised, observer-blind, placebo-controlled, multicentre clinical study to assess the immunogenicity and safety of GSK Biologicals? HZ/su candidate vaccine when administered intramuscularly on a 0- and 1- to 2-months schedule to adults > 18 years of age with renal transplant.

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Interim
Date of interim/final analysis	08 December 2016
Is this the analysis of the primary completion data?	Yes
Primary completion date	11 May 2016
Global end of trial reached?	No

Notes:

General information about the trial

Main objective of the trial:

- To evaluate vaccine response rate (VRR) for anti-glycoprotein E (anti-gE) humoral immune responses at Month 2, following a two-dose administration of the HZ/su vaccine, in all subjects.

Criterion to be used:

The objective was met if the lower limit of the 95% confidence interval (CI) of the VRR for anti-gE antibody (Ab) concentrations at Month 2 in the HZ/su vaccine group was at least 60%.

- To evaluate the safety following administration of HZ/su vaccine, as compared to placebo, from the first vaccination up to 30 days post last vaccination in all subjects.

Protection of trial subjects:

Vaccines were administered by qualified and trained personnel. Vaccines were administered only to eligible subjects that had no contraindications to any components of the vaccines.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	20 March 2014
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Canada: 26
Country: Number of subjects enrolled	Czech Republic: 25
Country: Number of subjects enrolled	Finland: 10
Country: Number of subjects enrolled	Belgium: 17
Country: Number of subjects enrolled	Italy: 7
Country: Number of subjects enrolled	Korea, Republic of: 39
Country: Number of subjects enrolled	Panama: 8
Country: Number of subjects enrolled	Spain: 119
Country: Number of subjects enrolled	Taiwan: 14
Worldwide total number of subjects	265
EEA total number of subjects	178

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0

Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	265
From 65 to 84 years	0
85 years and over	0

Pre-assignment

Screening details: -

Pre-assignment period milestones

Number of subjects started	265
----------------------------	-----

Number of subjects completed	264
------------------------------	-----

Pre-assignment subject non-completion reasons

Reason: Number of subjects	Study vaccine not received: 1
----------------------------	-------------------------------

Period 1

Period 1 title	Overall Study (overall period)
----------------	--------------------------------

Is this the baseline period?	Yes
------------------------------	-----

Allocation method	Randomised - controlled
-------------------	-------------------------

Blinding used	Single blind
---------------	--------------

Roles blinded	Subject
---------------	---------

Blinding implementation details:

As long as the study is still ongoing, information for the study arms remains blindd and will be presented in a pooled manner.

Arms

Arm title	Overall Study Group
-----------	---------------------

Arm description:

Subjects, aged 18 years or older, received 2 doses of the GSK 1437173A vaccine or placebo at Day 0, and Month 1.

Arm type	Experimental
----------	--------------

Investigational medicinal product name	Placebo
--	---------

Investigational medicinal product code	
--	--

Other name	lyophilised sucrose reconstituted with saline [NaCl] solution
------------	---

Pharmaceutical forms	Powder and solution for solution for injection
----------------------	--

Routes of administration	Intramuscular use
--------------------------	-------------------

Dosage and administration details:

2 doses at Day 0, and Month 1

Investigational medicinal product name	Herpes Zoster vaccine GSK1437173A
--	-----------------------------------

Investigational medicinal product code	
--	--

Other name	
------------	--

Pharmaceutical forms	Powder and solvent for suspension for injection
----------------------	---

Routes of administration	Intramuscular use
--------------------------	-------------------

Dosage and administration details:

2 doses at Day 0, and Month 1

Number of subjects in period 1^[1]	Overall Study Group
Started	264
Completed	261
Not completed	3
Adverse event, non-fatal	3

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: 1 enrolled subject did not receive vaccination and hence did not start the study.

Baseline characteristics

Reporting groups

Adverse events

Adverse events information^[1]

Timeframe for reporting adverse events:

Solicited local and general: within 7 days (Days 0-6) after each vaccination; AEs: during 30 days (Days 0-29) after each vaccination; SAEs: from the first vaccination up to study end at Month 13

Adverse event reporting additional description:

The frequent adverse events were being re-analyzed and not available at the time of posting. They will be added once validated.

Assessment type	Systematic

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
13 September 2013	<ul style="list-style-type: none">• Eligibility criteria have been added and modified for one or more of the following reasons: to respond to FDA/CBER comments, to increase the homogeneity of the subject population and/or to increase safety of the subjects.• As per CBER's request, any medical condition including the occurrence of a new pIMD or the exacerbation of an existing pIMD that, in the opinion of the investigator, exposes the subject to unacceptable risk from subsequent vaccination, constitutes contraindications to further administration of HZ/su vaccine. The change is not in response to any safety concern identified by GSK arising from an event or series of events in any completed or ongoing clinical studies that have been or are being conducted as part of GSK's Zoster vaccine program or in studies conducted as part of other GSK vaccine programs.• To add the endpoint of allograft dysfunction, as measured by serum creatinine, to the safety objectives (co-primary and secondary).• Secondary to limitations in number of designated CMI sites, allocation of subjects into the Cell-Mediated Immunity (CMI) sub-cohort will be based on the first eligible subjects enrolled at the designated sites until the targeted subject number is reached.• To add allograft instability as contraindication to subsequent vaccination.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
