Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	10 July 2015
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	10 July 2015
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To demonstrate that clinically significant hypoglycemia (defined as blood glucose <54 mg/dL (3.0 mmol/L) or symptoms of severe hypoglycemia) is significantly less frequent following a double dose of insulin peglispro than following a double dose of insulin glargine within 84 hours of double dosing in patients with Type 2 Diabetes Mellitus (T2DM).

Protection of trial subjects:

This study was conducted in accordance with International Conference on Harmonization (ICH) Good Clinical Practice, and the principles of the Declaration of Helsinki, in addition to following the laws and regulations of the country or countries in which a study is conducted.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	19 May 2014
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United States: 10
Country: Number of subjects enrolled	Germany: 58
Worldwide total number of subjects	68
EEA total number of subjects	58

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	56
From 65 to 84 years	12

85 years and over	0

Subject disposition

Recruitment

Recruitment details:

No Text Entered

Pre-assignment

Screening details:

No Text Entered

Period 1

Period 1 title	Study Period 1
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
Arm title	Insulin Peglispro/Insulin Glargine

Arm description:

Standard dose of insulin peglispro administered subcutaneously (SQ) once daily for 4 weeks in the first study period. Double dose of insulin peglispro administered once, SQ on day 3 of the inpatient stay.

Standard dose of insulin glargine administered subcutaneously (SQ) once daily for 4 weeks in the second study period. Double dose of insulin glargine administered once, SQ on day 3 of the inpatient stay.

Arm type	Experimental
Investigational medicinal product name	Insulin Peglispro
Investigational medicinal product code	
Other name	LY2605541
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Standard dose of insulin peglispro administered subcutaneously (SQ) once daily for 4 weeks in the first study period. Double dose of insulin peglispro administered once, SQ on day 3 of the inpatient stay.

Arm title	Insulin Glargine/Insulin Peglispro
------------------	------------------------------------

Arm description:

Standard dose of insulin glargine administered subcutaneously (SQ) once daily for 4 weeks in the first study period. Double dose of insulin glargine administered once, SQ on day 3 of the inpatient stay.

Standard dose of insulin peglispro administered subcutaneously (SQ) once daily for 4 weeks in the second study period. Double dose of insulin peglispro administered once, SQ on day 3 of the inpatient stay.

Arm type	Experimental
Investigational medicinal product name	Insulin Glargine
Investigational medicinal product code	
Other name	LY2605541
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Standard dose of insulin glargine administered subcutaneously (SQ) once daily for 4 weeks in the first study period. Double dose of insulin glargine administered once, SQ on day 3 of the inpatient stay.

Period 2

Period 2 title	Study Period 2 (Crossover)
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
Arm title	Insulin Peglispro/Insulin Glargine

Arm description:

Standard dose of insulin peglispro administered subcutaneously (SQ) once daily for 4 weeks in the first study period. Double dose of insulin peglispro administered once, SQ on day 3 of the inpatient stay.

Standard dose of insulin glargine administered subcutaneously (SQ) once daily for 4 weeks in the second study period. Double dose of insulin glargine administered once, SQ on day 3 of the inpatient stay.

Arm type	Experimental
Investigational medicinal product name	Insulin Glargine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Standard dose of insulin glargine administered subcutaneously (SQ) once daily for 4 weeks in the second study period. Double dose of insulin glargine administered once, SQ on day 3 of the inpatient stay.

Arm title	Insulin Glargine/Insulin Peglispro
------------------	------------------------------------

Arm description:

Standard dose of insulin glargine administered subcutaneously (SQ) once daily for 4 weeks in the first study period. Double dose of insulin glargine administered once, SQ on day 3 of the inpatient stay.

Primary: Percentage of Participants With Clinically Significant Hypoglycemia

End point title	Percentage of Participants With Clinically Significant Hypoglycemia ^[1]
-----------------	--

End point description:

The percentage was calculated by dividing the number of participants with clinically significant hypoglycemia events defined as blood glucose <54 milligrams per deciliter (mg/dL) (3.0 millimole per liter [mmol/L]) or symptoms of severe hypoglycemia by the total number of participants analyzed, multiplied by 100.

Analysis Population Description: All randomized participants who received the double dose of study drug and had evaluable hypoglycemia data were included in the analysis.

End point type	Primary
End point timeframe:	
Predose to 84 Hours Post Double Dose	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: System limitation- cannot accurately enter the number of participants enrolled in each treatment arm of this cross-over design. The statistical analysis included a total 62 participants. The method was a generalized linear model with fixed effect of treatment, period, sequence and baseline basal insulin dose strata, and random effect of participant. The P-value was <.001. The odds ratio was 0.13 at 95% confidence interval (0.04, 0.39).

End point values	Insulin Peglispro	Insulin Glargine

Secondary: Nadir Glucose

End point title	Nadir Glucose
-----------------	---------------

End point description:

Nadir glucose was defined as the lowest blood glucose for a participant with blood glucose ≤ 70 mg/dL (3.9 mmol/L). Least Squares (LS) means were calculated using a mixed model repeated measures (MMRM) analysis including the following fixed effects: treatment, period, sequence, and baseline basal insulin dose stratification factor.

Analysis Population Description: All randomized participants who received the double dose of study drug and had blood glucose ≤ 70 mg/dL (3.9 mmol/L) during the first 84 hours after the double dose were included in the analysis.

End point type	Secondary
----------------	-----------

Secondary: Time to the Nadir Glucose

End point title	Time to the Nadir Glucose
-----------------	---------------------------

End point description:

Nadir glucose was defined as the lowest blood glucose for a participant with blood glucose ≤ 70 mg/dL (3.9 mmol/L). The average time was calculated by dividing the sum of time from double dose to the nadir glucose for participants with blood glucose ≤ 70 mg/dL (3.9 mmol/L) by the number of participants with blood glucose ≤ 70 mg/dL (3.9 mmol/L) during the first 84 hours after the double dose.

Analysis Population Description: All randomized participants who received the double dose of study drug and had blood glucose ≤ 70 mg/dL (3.9 mmol/L) during the first 84 hours after the double dose were included in the analysis.

End point type	Secondary
----------------	-----------

End point timeframe:

Predose to 84 Hours Post Double Dose

End point values	Insulin Peglispro	Insulin Glargine		
Subject group type	Subject analysis set	Subject analysis set		
Number of subjects analysed	26	51		
Units: hours				
median (full range (min-max))	27.93 (3.17 to 76.67)	27.33 (1.00 to 81.97)		

Statistical analyses

No statistical analyses for this end point

Secondary: Duration of Glucose ≤ 70 mg/dL

End point title	Duration of Glucose ≤ 70 mg/dL
-----------------	-------------------------------------

End point description:

The duration in minutes of each hypoglycemia episode with glucose ≤ 70 mg/dL (3.9 mmol/L) was calculated from start time to end time. The duration for a participant was the sum of the durations over the multiple hypoglycemia episodes. LS means were calculated using an MMRM analysis including the following fixed effects: treatment, period, sequence, and baseline basal insulin dose stratification factor.

Analysis Population Description: All randomized participants who received the double dose of study drug and had evaluable hypoglycemia data were included in the analysis.

End point type	Secondary
End point timeframe:	
Predose to 84 Hours Post Double Dose	

End point values	Insulin Peglispro	Insulin Glargine		
Subject group type	Subject analysis set	Subject analysis set		
Number of subjects analysed	61	62		
Units: Minutes per participant				
least squares mean (standard error)	95.28 (± 37.57)	362.26 (± 37.26)		

Statistical analyses

No statistical analyses for this end point

Secondary: Fasting Blood Glucose

End point title	Fasting Blood Glucose
End point description:	
Fasting blood glucose (FBG) was measured by self-monitored blood glucose. LS means were calculated by MMRM analysis with fixed effects of treatment, dosing day, sequence, period, interaction of treatment and dosing day, baseline basal insulin dose stratification factor, and baseline FBG.	
Analysis Population Description: All randomized participants who received the double dose of study drug and had evaluable fasting blood glucose data were included in the analysis.	
End point type	Secondary
End point timeframe:	
Day 1, Day 2, and Day 3 Following Double Dose	

End point values	Insulin Peglispro	Insulin Glargine		
Subject group type	Subject analysis set	Subject analysis set
