

## Clinical trial results:

### Phase I-II study of F14512 in combination with cytarabine in patients 60 years old and older with acute myeloid leukemia.

#### Summary

EudraCT number	2012-005241-20
Trial protocol	FR IT ES
Global end of trial date	03 March 2017

#### Results information

Result version number	v1 (current)
This version publication date	01 April 2018
First version publication date	01 April 2018

#### Trial information

##### Trial identification

Sponsor protocol code	F14512IN102G1
-----------------------	---------------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	-
WHO universal trial number (UTN)	-

Notes:

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	10 December 2015
Is this the analysis of the primary completion data?	Yes
Primary completion date	10 December 2015
Global end of trial reached?	Yes
Global end of trial date	03 March 2017
Was the trial ended prematurely?	Yes

Notes:

## General information about the trial

Main objective of the trial:

Phase I part:

To determine the maximal tolerated dose (MTD) of F14512 administered as a three-hour daily infusion given for 5 consecutive days in combination with cytarabine 1 g/m<sup>2</sup>/day for 5 consecutive days in patients 60 years old or older with refractory or relapsing AML.

Phase II part:

To evaluate the efficacy of F14512 in combination with cytarabine (rate of complete remission [CR] and complete remission with incomplete blood recovery [CRI]) in AML patients 60 years old and older in first relapse or with refractory disease.

Protection of trial subjects:

This study was performed in accordance with the principles stated in current version of the Declaration of Helsinki (1964 and subsequent amendments) and with the International Council for Harmonisation (ICH) guidelines on Good Clinical Practice (GCP) (CPMP/ICH/135/95), and with related national regulations in biomedical research. All patients were informed of the aims, methods, objectives, and potential hazards of the study, and a signed informed consent form (ICF) was obtained from each patient prior to any study related procedures, or appropriate corrective actions have been implemented in case of failure. A specific patient informed consent, either on the same document or a separate document depending on the country, was also required for genetic research. The first study protocol in use (V2 : 15 February 2013), all of its 3 amendments (all substantial), and the patient information sheets, were reviewed by the appropriate IECs, including local IECs.

Background therapy:

In both phases, the test product (F14512) was administered in combination with cytarabine. F14512 (3-h daily infusion) was tested at the doses of 10 (DL 1), 15 (DL 1), 20 (DL 2), 26 (DL 3) and 34 mg/m<sup>2</sup>/day (DL 4) (Phase I) and 26 mg/m<sup>2</sup>/day (Phase II-induction) then 15 mg/m<sup>2</sup>/day (Phase II consolidation) : F14512 was administered as a 3 hour daily infusion, beginning 1 hour after the end of cytarabine infusion (1g/m<sup>2</sup>/day) for 5 consecutive days per 21-to-42-day cycle : until unacceptable toxicity/disease progression and up to a maximum of 6 cycles in phase I ; up to a maximum of 5 cycles (1 induction+4 consolidation or 2 induction+3 consolidation cycles) in phase II.

Evidence for comparator:

The non-randomised, open-label design was typical for a Phase I to II oncology study with such objectives. There was no placebo control group as this would not have been ethical in this patient population. In first relapse, there is no single approach considered as standard and treatment is selected based on the age of the patient and the duration of the first complete response. In patients who are 60 years old or older, intermediate dose cytarabine alone or associated with another cytotoxic agent is commonly used. Results of a previous Phase I study of single-agent F14512 in patients with relapsed and refractory AML, together with demonstration of synergism between F14512 and cytarabine in preclinical models, constituted the rationale for testing this combination regimen in patients with AML.

Actual start date of recruitment	09 April 2013
Long term follow-up planned	Yes
Long term follow-up rationale	Efficacy, Safety
Long term follow-up duration	26 Months
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Adults (18-64 years)	15
From 65 to 84 years	56
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

72 patients were registered (71 in France, 1 in Spain), and 71 patients were enrolled and treated (70 in France, 1 in Spain) :

- 18 in Phase I part in 4 cohorts (3, 3, 6 and 6 patients were administered 15mg/m<sup>2</sup>/day, 20mg/m<sup>2</sup>/day, 26mg/m<sup>2</sup>/day and 34 mg/m<sup>2</sup>/day, respectively)
- 53 in Phase II part (26mg/m<sup>2</sup>/day)

### Pre-assignment

Screening details:

Eligible patients had AML (both phases) refractory after failure of 1 induction chemotherapy regimen or recurrence of disease < 3 months after CR, or (Phase I) relapsed AML, or (Phase II) first relapse after CR or CRi lasting 3 to 24 months ; were ≥60 years, with WHO PS ≤ 2, adequate liver and renal function and a LVEF≥45%.

### Period 1

Period 1 title	Treatment Period (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Blinding implementation details:

N/A

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Phase I-15 mg

Arm description:

Patients treated with F14512 at 15 mg/m<sup>2</sup>/day during the phase I dose escalation

Arm type	Experimental
Investigational medicinal product name	F14512
Investigational medicinal product code	F14512
Other name	
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

F14512 was administered as a 3-hour daily infusion, beginning 1 hour after the end of cytarabine infusion, through a central venous catheter for 5 consecutive days

Investigational medicinal product name	cytarabine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Dose of 1 g/m<sup>2</sup>/day as a 2-hour daily infusion for 5 consecutive days

<b>Arm title</b>	Phase I-20 mg
------------------	---------------

Arm description:

Patients treated with F14512 at 20 mg/m<sup>2</sup>/day during the Phase I dose escalation

Arm type	Experimental
----------	--------------

Investigational medicinal product name	F14512
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use
Dosage and administration details:	
Dose of 20 mg/m <sup>2</sup> /day administered as a 3-hour daily infusion, beginning 1 hour after the end of cytarabine infusion, through a central venous catheter for 5 consecutive days	
Investigational medicinal product name	cytarabine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dose of 1 g/m <sup>2</sup> /day administered as a 2-hour daily infusion for 5 consecutive days	
<b>Arm title</b>	Phase I-26 mg
Arm description:	
Patients treated with F14512 26 mg/m <sup>2</sup> /day during Phase I-dose escalation	
Arm type	Experimental
Investigational medicinal product name	F14512
Investigational medicinal product code	F14512
Other name	
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use
Dosage and administration details:	
Doses of 26 mg/m <sup>2</sup> /day administered as a 3-hour daily infusion, beginning 1 hour after the end of cytarabine infusion, through a central venous catheter for 5 consecutive days	
Investigational medicinal product name	cytarabine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use
Dosage and administration details:	
Dose of 1 g/m <sup>2</sup> /day administered as a 2-hour daily infusion for 5 consecutive days.	
<b>Arm title</b>	Phase I-34 mg
Arm description:	
Patients treated with F14512 at 34 mg/m <sup>2</sup> /day in the Phase I dose escalation	
Arm type	Experimental
Investigational medicinal product name	F14512
Investigational medicinal product code	F14512
Other name	
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use
Dosage and administration details:	
Dose of 34 mg/m <sup>2</sup> /day administered as a 3-hour daily infusion, beginning 1 hour after the end of cytarabine infusion, through a central venous catheter for 5 consecutive days	
Investigational medicinal product name	cytarabine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Dose of 1 g/m<sup>2</sup>/day administered as a 2-hour daily infusion for 5 consecutive days

<b>Arm title</b>	Phase II (26 mg)
Arm description: All patients treated in Phase II of the study. In this phase, all patients were treated with F14512 at the dose of 26 mg/m <sup>2</sup> /day during the induction cycle(s)	
Arm type	Experimental
Investigational medicinal product name	F14512
Investigational medicinal product code	F14512
Other name	
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Dose of 26 mg/m<sup>2</sup>/day administered as a 3-hour daily infusion, beginning 1 hour after the end of cytarabine infusion, through a central venous catheter for 5 consecutive days during the induction cycle(s) = 1st and (if haematological improvement) 2nd cycle. During the consolidation cycles, the dose was reduced to 15 mg/m<sup>2</sup>/day.

Investigational medicinal product name	cytarabine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Dose of 1 g/m<sup>2</sup>/day administered as a 2-hour daily infusion for 5 consecutive days

### Primary: Dose limiting toxicity (DLT)-Phase I

End point title	Dose limiting toxicity (DLT)-Phase I <sup>[1][2]</sup>
End point description:	
The maximal tolerated dose (MTD) was defined as the dose at which 2 out of 3 or 2 out of 6 patients experienced a DLT during the 1st cycle of administration	
End point type	Primary
End point timeframe:	
1st cycle of administration (min 21 days, max 42 days)	

#### Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: No statistical analysis planned. The conclusion were based on the number of patients with DLT in each dose level

[2] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: There was no evaluation of DLT assessed in the single arm of the Phase II part of the trial (different objective from that of Phase I). Phase II part was conducted at the recommended dose determined in phase I (defined as the dose immediately below the MTD): 34 mg/m2/day was determined to be the MTD and 26 mg/m2/day the recommended dose for Phase II.

End point values	Phase I-15 mg	Phase I-20 mg	Phase I-26 mg	Phase I-34 mg
Subject group type	Reporting group	Reporting group	Reporting group	Reporting group
Number of subjects analysed	3	3	6	6
Units: number of patients with DLTs	0	0	0	2

## Statistical analyses

No statistical analyses for this end point

### Primary: Overall response rate (ORR)-Phase II

End point title	Overall response rate (ORR)-Phase II <sup>[3]</sup>
-----------------	---

End point description:

The ORR is defined as the rate of patients in complete remission (CR) or in complete remission with incomplete blood recovery (CRi) as assessed by the Investigator.

The 95% CI was one-sided (left-sided).

End point type	Primary
----------------	---------

End point timeframe:

The ORR was evaluated in phase II, after one or (if haematological improvement after cycle 1) two cycles of induction.

Notes:

[3] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: No statistical analysis planned. The conclusion were based on the descriptive values.

End point values	Phase II ITT set			
Subject group type	Subject analysis set			
Number of subjects analysed				
Units: percentage				
number (confidence interval 95%)	37.7 (26.6 to 100.0)			

## Statistical analyses

No statistical analyses for this end point

### Secondary: ORR-Phase I

End point title	ORR-Phase I <sup>[4]</sup>
-----------------	----------------------------

End point description:

The ORR was the rate of responders i.e. of patients in complete remission (CR) or complete remission with incomplete blood recovery (CRi) as assessed by the Investigator

End point type	Secondary
----------------	-----------

End point timeframe:

The ORR in phase I was evaluated over the treatment period i.e. until unacceptable toxicity or disease progression up to a maximum of 6 cycles.

Notes:

[4] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: No statistical analysis planned. The conclusion were based on the descriptive values.

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
07 May 2013	Completion of the definition of DLT. Correction of a discrepancy between the synopsis and the protocol regarding the exclusion criteria number 10. Correction of the volume of rinse of the catheter following the end of F14512 infusion. Addition of specifications for F14512 preparation. Correction of the labelling of the study drugs F14512 and Cytarabine. Modification of the reporting modalities of SAEs and the SAE report form. Addition of pharmaceutical information about the non-modified associated product Cytarabine following the addition of a second supplier.
28 April 2014	combination (F14512 plus cytarabine) showed similar results in first relapsed and refractory patients. Extension of the follow-up phase until documentation of death from any cause. Modification of the PK sampling in Phase II regarding the results of Phase I and modification of the volume of bone marrow sample for Specification of the RD determined during Phase I, to be tested during Phase II (26 mg/m <sup>2</sup> /day of F14512). Definition of specific criteria allowing 1 re-induction cycle and consolidation cycles, for Phase II, as well as the rules of study drugs administration: dose of F14512 and cytarabine and number of cycles. Extension of the inclusion criteria of Phase II to patients who had refractory AML after failure of 1 induction chemotherapy regimen or who had recurrence of disease < 3 months after CR. In Phase I, the rate of response of the PD assessments (Phase I and Phase II). Withdrawal of PBMC sample collection. Study manager was appointed and head statistician was changed. Modification of the blood sampling procedures for PK assessment. Correction of the results of efficacy of the first-in-man Phase I study. Extension of the list of participating countries. The number of sites was increased in order to recruit the 50 patients in Phase II. Update of the version of the IB. Update of the version of the World Medical Association Declaration of Helsinki (October 2013).
03 February 2015	Extension of the recruitment period in order to obtain the 50 patients requested by the protocol in the ongoing Phase II part.

Notes:

### Interruptions (globally)

Were there any global interruptions to the trial? Yes

Date	Interruption	Restart date
03 March 2017	Due to the discontinuation of the development of F14512 in the indication of AML, and, as described in the study protocol, the sponsor decided to proceed with an early termination of the trial on 03 March 2017. All the patients had finished the study treatment period at time of trial early termination. The date of the last study drug administration was 24 October 2015.	-

---

Notes:

## Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

No limitations and caveats for Phase I of the trial: 26 mg/M2/day was defined as the recommended dose for Phase II.

The early termination of Phase II is not a limitation as all patients had completed the treatment period + 60 days evaluation period.

Notes:
