

## Clinical trial results:

### Bivalirudin versus Heparin in NST and ST-Evaluation myocardial infarction in patients on modern antiplatelet therapy in SWEDEHEART (the VALIDATE-SWEDEHEART-trial)

#### Summary

EudraCT number	2012-005260-10
Trial protocol	SE
Global end of trial date	10 March 2017

#### Results information

Result version number	v1 (current)
This version publication date	13 February 2019
First version publication date	13 February 2019

#### Trial information

##### Trial identification

Sponsor protocol code	U-2013-028
-----------------------	------------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	-
WHO universal trial number (UTN)	-

Notes:

#### Sponsors

Sponsor organisation name	Uppsala Clinical Research Center (UCR)
Sponsor organisation address	Dag Hammarskjölds väg 38, Uppsala, Sweden, 751 85
Public contact	Jonas Oldgren, Uppsala Clinical Research Center, +46 18 611 2765, jonas.oldgren@ucr.uu.se

Notes:

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

---

**Results analysis stage**

---

Analysis stage	Final
Date of interim/final analysis	10 March 2017
Is this the analysis of the primary completion data?	Yes
Primary completion date	10 March 2017
Global end of trial reached?	Yes
Global end of trial date	10 March 2017
Was the trial ended prematurely?	No

Notes:

---

**General information about the trial**

---

Main objective of the trial:

To compare all-cause death, MI, and bleeding events in patients with STEMI and NSTEMI at 180 days, treated with PCI and either Bivalirudin infusion or Heparin i.v. according to local protocol.

Protection of trial subjects:

An independent Data Safety Monitoring Board (DSMB) (sometimes referred to as a Data Safety Monitoring Committee (DSMC)) is responsible for safeguarding the interest of trial participants, assessing the safety of the interventions during the trial, and for monitoring the overall conduct of the clinical trial. This committee is also responsible for making recommendations to the study leadership to continue or terminate the trial with regard to safety considerations based on reports provided by an unblinded statistician.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	26 June 2014
Long term follow-up planned	Yes
Long term follow-up rationale	Scientific research
Long term follow-up duration	10 Years
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

---

**Population of trial subjects**

---

**Subjects enrolled per country**

Country: Number of subjects enrolled	Sweden: 6006
Worldwide total number of subjects	6006
EEA total number of subjects	6006

Notes:

---

**Subjects enrolled per age group**

---

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	2327

From 65 to 84 years	3362
85 years and over	317

## Subject disposition

### Recruitment

Recruitment details: -

### Pre-assignment

Screening details:

Patients were recruited among those referred to the centers for PCI because of STEMI or NSTEMI. NSTEMI patients provided written consent before angiography, while STEMI patients first gave a witnessed consent before diagnostic coronary angiography in the catheterization lab followed by signing informed consent within 48h if they wished to continue.

### Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

### Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

<b>Arm title</b>	Heparin-STEMI
------------------	---------------

Arm description:

Treatment with heparin i.v. alone (according to local practice) in patients with ST-elevation myocardial infarction (STEMI) treated with bolus dose of potent P2Y12 receptor inhibitors; ticagrelor, prasugrel or cangrelor before start of PCI.

Arm type	Active comparator
Investigational medicinal product name	Heparin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion, Injection
Routes of administration	Intraarterial use, Intravenous bolus use

Dosage and administration details:

The control group received treatment with unfractionated heparin. Heparin was administered as an intravenous or intra-arterial bolus according to local practice. A dose of 70-100U/kg was recommended.

<b>Arm title</b>	Bivalirudin-STEMI
------------------	-------------------

Arm description:

Treatment with Bivalirudin 0.75 mg/kg followed by an infusion of 1.75 mg per kilogram per hour in patients with ST-elevation myocardial infarction (STEMI) treated with bolus dose of potent P2Y12 receptor inhibitors; ticagrelor, prasugrel or cangrelor before start of PCI.

Arm type	Experimental
Investigational medicinal product name	Bivalirudin
Investigational medicinal product code	
Other name	Angiox
Pharmaceutical forms	Infusion, Injection
Routes of administration	Intravenous bolus use , Intravenous use

Dosage and administration details:

Bivalirudin 0.75 mg/kg followed by an infusion of 1.75 mg per kilogram per hour (optional to add up to 3000U heparin in lab or up to 5000U given pre-hospital).

<b>Arm title</b>	Heparin-NSTEMI
------------------	----------------

Arm description:

Treatment with heparin i.v. alone (according to local practice) in patients with non-ST-elevation myocardial infarction (NSTEMI) treated with bolus dose of potent P2Y12 receptor inhibitors; ticagrelor, prasugrel or cangrelor before start of PCI.

Arm type	Active comparator
----------	-------------------

Investigational medicinal product name	Heparin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion, Injection
Routes of administration	Intraarterial use, Intravenous bolus use

**Dosage and administration details:**

The control group received treatment with unfractionated heparin. Heparin was administered as an intravenous or intra-arterial bolus according to local practice. A dose of 70-100U/kg was recommended.

<b>Arm title</b>	Bivalirudin-NSTEMI
------------------	--------------------

**Arm description:**

Treatment with Bivalirudin 0.75 mg/kg followed by an infusion of 1.75 mg per kilogram per hour in patients with non-ST-elevation myocardial infarction (NSTEMI) treated with bolus dose of potent P2Y12 receptor inhibitors; ticagrelor, prasugrel or cangrelor before start of PCI.

Arm type	Experimental
Investigational medicinal product name	Bivalirudin
Investigational medicinal product code	
Other name	Angiox
Pharmaceutical forms	Infusion, Injection
Routes of administration	Intravenous bolus use , Intravenous use

**Dosage and administration details:**

Bivalirudin 0.75 mg/kg followed by an infusion of 1.75 mg per kilogram per hour (optional to add up to 3000U heparin in lab or up to 5000U given pre-hospital).

<b>Number of subjects in period 1</b>	Heparin-STEMI	Bivalirudin-STEMI	Heparin-NSTEMI
Started	1504	1501	1498
Completed	1489	1482	1479
Not completed	15	19	19
Consent withdrawn by subject	11	12	14
Lost to follow-up	4	7	5

<b>Number of subjects in period 1</b>	Bivalirudin-NSTEMI

**Primary: Difference in all-cause death, myocardial infarction, or major bleeding events in patients with STEMI and NSTEMI at 180 days, treated with PCI and either Bivalirudin infusion or Heparin i.v. according to local protocol.**

End point title	Difference in all-cause death, myocardial infarction, or major bleeding events in patients with STEMI and NSTEMI at 180 days, treated with PCI and either Bivalirudin infusion or
-----------------	---

**End point description:**

Events were followed up using SWEDEHEART and other national registries and telephone contact at 7 and 180 days from randomization. Patients without events were censored on day 180 for derived 180 day completers, and recorded day of discontinuation for other patients. A Clinical Endpoint Committee (CEC) was established to perform an independent adjudication for all reported primary endpoints.

**End point type**

Primary

**End point timeframe:**

Follow up of primary endpoints was performed by telephone contact with the patients or first-degree relatives by a nurse 7 days and 180 days after randomization.

<b>End point values</b>	Heparin-STEMI (ITT)	Bivalirudin-STEMI (ITT)	Heparin-NSTEMI (ITT)	Bivalirudin-NSTEMI (ITT)

Number of subjects analysed	3002	3004		
Units: Events	383	369		

**Statistical analyses****Statistical analysis title**

Analysis of difference of primary endpoint

**Statistical analysis description:**

The hazard ratio between the bivalirudin group and the heparin group was estimated, in the ITT population, using a Cox proportional hazard model with factor randomized treatment, and presented with a 95% confidence interval. The protocol pre-defines the log-rank test, hence the equivalent score test p-value from the Cox model was used. A two-sided p-value of <0.05 is regarded as statistically significant.

Comparison groups	Heparin (ITT) v Bivalirudin (ITT)
Number of subjects included in analysis	6006
Analysis specification	Pre-specified
Analysis type	superiority <sup>[1]</sup>
P-value	= 0.5362
Method	Logrank
Parameter estimate	Cox proportional hazard
Point estimate	0.96
Confidence interval	
level	95 %
sides	2-sided
lower limit	0.83
upper limit	1.1

---

Notes:

[1] - 12.3% patients (369 of 3004) in the bivalirudin group and in 12.8% (383 of 3002) in the heparin group (hazard ratio, 0.96; 95% confidence interval [CI], 0.83 to 1.10; P = 0.5362).

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

Registration of adverse events started at visit 1 (day 0) after informed consent and when treatment with study medication had been given and went on until day 7 after randomization into the study.

Adverse event reporting additional description:

The following events were not collected as AE: suspected primary events or stroke, symptoms or worsening of STEMI/NSTEMI, common events in patients undergoing PCI, hospitalization in connection with PCI or planned hospitalizations, and expected AEs to heparin or bivalirudin.

Assessment type	Systematic

Rash and other nonspecific skin eruption subjects affected / exposed occurrences (all)	1 / 3002 (0.03%) 1	3 / 3004 (0.10%) 3	
Endocrine disorders			
Unspecified diabetes mellitus subjects affected / exposed occurrences (all)	3 / 3002 (0.10%) 3	4 / 3004 (0.13%) 4	
Type 2 diabetes mellitus subjects affected / exposed occurrences (all)	3 / 3002 (0.10%) 3	0 / 3004 (0.00%) 0	

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
25 January 2013	Amendment 1 included minor administrative changes to the protocol.
15 February 2014	Amendment 3 included minor administrative changes to the protocol. Note that Amendment 2 was rejected by the regulatory authority and was not implemented.
17 October 2014	In Amendment 4, the following secondary outcome variables were added: <ul style="list-style-type: none"><li>• The primary endpoint combined with stroke (added post-FPI, Amendment IV, 2014-10-17)</li><li>• Bail-out use of GpIIb/IIIa inhibitors during PCI (added post-FPI, Amendment IV, 2014-10-17)</li></ul>
06 July 2015	In Amendment 5, the following secondary outcome variable was updated : <ul style="list-style-type: none"><li>• Time to subtypes of reinfarction as reported in by CEC (1, 2, 3, 4a, 4b, 5). (Added post-FPI, Amendment V, 2015-07-06, although adjudication of infarction types was planned in the first version of the Clinical Endpoint Committee (CEC) Charter (dated 2014-12-18), the protocol, by mistake, states time to "rehospitalization with" subtypes of myocardial infarction (MI), but the CEC does not adjudicate rehospitalization, only MI).</li></ul>

Notes:

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Note that age data is missing for 7 patients. In the results reported for "Subjects enrolled per age group", these patients are included in the most common age group (Adults 65-84y).
