Clinical trial results:
A 12-month, randomized, double-masked, sham-controlled, multicenter study to evaluate the efficacy and safety of 0.5 mg ranibizumab intravitreal injections in patients with visual impairment due to vascular endothelial growth factor (VEGF) driven choroidal neovascularization (CNV)

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	11 November 2015
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	11 November 2015
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective was to demonstrate that an individualized regimen of intravitreal injection of 0.5 mg ranibizumab has superior efficacy compared to sham treatment in adult patients with visual impairment due to VEGF-driven CNV. It was assessed by the best-corrected visual acuity (BCVA) change from baseline to Month 2.

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and the International Conference on Harmonization (ICH) Good Clinical Practice (GCP) guidelines. All local regulatory requirements pertinent to safety of trial subjects were also followed during the conduct of the trial.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	19 September 2013
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	123
From 65 to 84 years	54
85 years and over	1

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

A total of 183 participants were enrolled. Of these, 178 adults were randomized in a 2:1 ratio and considered for analysis. Additionally, the study included 5 adolescent participants, non-randomized, who received open-label treatment and were not included in the analyses.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Investigator, Monitor, Data analyst, Carer, Subject, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	Ranibizumab

Arm description:

A 0.5 mg ranibizumab intravitreal injection was given to the study eye at baseline, and then as needed based on evidence of disease activity.

Arm type	Experimental
Investigational medicinal product name	Ranibizumab
Investigational medicinal product code	RFB002
Other name	Lucentis
Pharmaceutical forms	Injection
Routes of administration	Intravitreal use

Dosage and administration details:

0.5 mg ranibizumab intravitreal injection to the study eye at baseline, and then as needed based on evidence of disease activity

Arm title	Sham control

Arm description:

Sham injection was given to the study eye at baseline, and then treatment was given based on evidence of disease activity. At Month 1, if treatment was needed, sham was administered. At Month 2, participants could switch to open-label ranibizumab on an as needed basis.

Arm type	Placebo
Investigational medicinal product name	Sham
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intravitreal use

Dosage and administration details:

Sham injection was given to the study eye at baseline, and then treatment was given based on evidence of disease activity. At Month 1, if treatment was needed, sham was administered. At Month 2, participants could switch to open-label ranibizumab on an as needed basis. The sham vial did not contain active drug (empty sterile vial). The sham injection was an imitation of an intravitreal injection using an injection syringe without a needle touching the eye.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Serious Adverse Events are monitored from date of First Patient First Visit (FPFV) until Last Patient Last Visit (LPLV). All other adverse events are monitored from First Patient First Treatment until Last Patient Last Visit.

Adverse event reporting additional description:

Consistent with EudraCT disclosure specifications, Novartis has reported under the Serious adverse events field "number of deaths resulting from adverse events" all those deaths, resulting from serious adverse events that are deemed to be causally related to treatment by the investigator.

Assessment type	Systematic

Headache			
subjects affected / exposed	1 / 119 (0.84%)	1 / 7 (14.29%)	3 / 52 (5.77%)
occurrences (all)	1	1	3
Eye disorders			
Choroidal neovascularisation (Study eye)			
subjects affected / exposed	3 / 119 (2.52%)	1 / 7 (14.29%)	0 / 52 (0.00%)
occurrences (all)	3	1	0
Conjunctival haemorrhage (Study eye)			
subjects affected / exposed	7 / 119 (5.88%)	0 / 7 (0.00%)	6 / 52 (11.54%)
occurrences (all)	8	0	7
Eye inflammation (Study eye)			
subjects affected / exposed	0 / 119 (0.00%)	1 / 7 (14.29%)	0 / 52 (0.00%)
occurrences (all)	0	1	0
Foreign body sensation in eyes (Study eye)			
subjects affected / exposed	1 / 119 (0.84%)	1 / 7 (14.29%)	1 / 52 (1.92%)
occurrences (all)	1	1	1
Macular oedema (Study eye)			
subjects affected / exposed	0 / 119 (0.00%)	1 / 7 (14.29%)	0 / 52 (0.00%)
occurrences (all)	0	1	0
Ocular hyperaemia (Study eye)			
subjects affected / exposed	1 / 119 (0.84%)	1 / 7 (14.29%)	1 / 52 (1.92%)
occurrences (all)	1	1	1
Photopsia (Study eye)			
subjects affected / exposed	1 / 119 (0.84%)	1 / 7 (14.29%)	0 / 52 (0.00%)
occurrences (all)	1	1	0

Visual acuity reduced (Study eye)			
subjects affected / exposed	3 / 119 (2.52%)	1 / 7 (14.29%)	1 / 52 (1.92%)
occurrences (all)	3	1	2
Musculoskeletal and connective tissue disorders			
Back pain			
subjects affected / exposed	6 / 119 (5.04%)	1 / 7 (14.29%)	0 / 52 (0.00%)
occurrences (all)	6	1	0
Infections and infestations			
Conjunctivitis (Study eye)			
subjects affected / exposed	2 / 119 (1.68%)	0 / 7 (0.00%)	3 / 52 (5.77%)
occurrences (all)	2	0	3
Influenza			
subjects affected / exposed	9 / 119 (7.56%)	0 / 7 (0.00%)	0 / 52 (0.00%)
occurrences (all)	9	0	0
Nasopharyngitis			
subjects affected / exposed	14 / 119 (11.76%)	1 / 7 (14.29%)	9 / 52 (17.31%)
occurrences (all)	19	1	12
Pneumonia			
subjects affected / exposed	1 / 119 (0.84%)	1 / 7 (14.29%)	0 / 52 (0.00%)
occurrences (all)	1	1	0
Sinusitis			
subjects affected / exposed	2 / 119 (1.68%)	0 / 7 (0.00%)	3 / 52 (5.77%)
occurrences (all)	2	0	4

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
04 May 2014	Amendment 1 (04-May-2014) was a substantial amendment and was issued 8 months after study start (when 28 patients were enrolled) and introduced the following changes: protocol-specified retreatment criteria were aligned with current medical practice for the management of patients with visual impairment due to CNV, specifically the inclusion of anatomic parameters, in addition to BCVA; eligibility criteria were revised to exclude two additional CNV conditions that are considered sub-categories of nAMD: 1) PCV and 2) RAP lesions in patients ≥ 50 years of age. The classification of these two CNV conditions as nAMD was not explicitly mentioned in the original protocol, which led to inclusion of some patients with these conditions; and two optional tests, visual field and electroretinography, were removed based on expert feedback.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
