

Clinical trial results:

A 12-month, randomized, double-masked, sham-controlled, multicenter study to evaluate the efficacy and safety of 0.5mg ranibizumab intravitreal injections in patients with visual impairment due to vascular endothelial growth factor (VEGF) driven macular edema

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	09 September 2015
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	09 September 2015
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective of this study was to demonstrate that an individualized regimen of intravitreal injection of 0.5 mg ranibizumab has superior efficacy compared to sham treatment in adult patients with visual impairment due to ME. The primary objective was assessed by the best-corrected visual acuity (BCVA) change from baseline to Month 2.

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and the International Conference on Harmonization (ICH) Good Clinical Practice (GCP) guidelines. The local regulatory requirements pertinent to safety of trial subjects were also followed during the conduct of the trial.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	10 October 2013
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Australia: 15

Country: Number of subjects enrolled	Switzerland: 6

Country: Number of subjects enrolled	Turkey: 7
Worldwide total number of subjects	178
EEA total number of subjects	107

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	89
From 65 to 84 years	81
85 years and over	8

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

A total of 181 participants were enrolled. Of these, 178 adults were randomized in a 2:1 ratio and considered for analysis. Additionally, the study included 3 adolescent participants, non-randomized, who received open-label treatment and were not included in the analyses.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	Ranibizumab

Arm description:

A 0.5 mg ranibizumab intravitreal injection was given to the study eye at baseline, and then as needed based on evidence of disease activity.

Arm type	Experimental
Investigational medicinal product name	Ranibizumab
Investigational medicinal product code	RFB002
Other name	Lucentis
Pharmaceutical forms	Injection
Routes of administration	Intravitreal use

Dosage and administration details:

0.5 mg ranibizumab intravitreal injection to the study eye at baseline, and then as needed based on evidence of disease activity

Arm title	Sham
------------------	------

Arm description:

Sham injection was given to the study eye at baseline, and then treatment was given based on evidence of disease activity. At Month 1, if treatment was needed, sham was administered. At Month 2, participants could switch to open-label ranibizumab on an as needed basis.

Arm type	Placebo
Investigational medicinal product name	Sham
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intravitreal use

Dosage and administration details:

Sham injection was given to the study eye at baseline, and then treatment was given based on evidence of disease activity. At Month 1, if treatment was needed, sham was administered. At Month 2, participants could switch to open-label ranibizumab on an as needed basis. The sham vial did not contain active drug (empty sterile vial). The sham injection was an imitation of an intravitreal injection using an injection syringe without a needle touching the eye.

Number of subjects in period 1	Ranibizumab	Sham
Started	118	60
Completed	106	50
Not completed	12	10
Adverse event, serious fatal	1	2
Physician decision	4	2
Consent withdrawn by subject	1	6
Adverse event, non-fatal	2	-
Protocol deviation	1	-
Lost to follow-up	3	-

Secondary: Number of participants with re-treatments

End point title	Number of participants with re-treatments ^[13]
End point description:	
The number of participants, administered re-treatments according to treatment frequency, was assessed. Re-treatment was defined as an administration of study medication following at least one non-missed visit where treatment was not administered in the study eye. Up to Month 12, the maximum number of retreatments was 5.	
End point type	Secondary
End point timeframe:	
Month 6, Month 12	

Notes:

[13] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: All arms do not apply to the end point.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Serious Adverse Events are monitored from date of First Patient First Visit (FPFV) until Last Patient Last Visit (LPLV). All other adverse events are monitored from First Patient First Treatment until Last Patient Last Visit.

Adverse event reporting additional description:

Consistent with EudraCT disclosure specifications, Novartis has reported under the Serious adverse events field "number of deaths resulting from adverse events" all those deaths, resulting from serious adverse events that are deemed to be causally related to treatment by the investigator.

Assessment type	Systematic

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
04 May 2014	The alignment of the protocol-specified retreatment criteria with current medical practice for the management of patients with visual impairment due to ME, specifically the inclusion of anatomical parameters in addition to BCVA. The optional test, electroretinography (ERG), was removed based on expert feedback. The eligibility criteria for patients with rare diseases were clarified to improve the quality of the patient population by 1) excluding patients with diseases and conditions that were known to spontaneously resolve and/or those in which the use of VEGF inhibitors is controversial and 2) allowed the inclusion of patients with other diseases and conditions that could potentially benefit from treatment with ranibizumab.
31 March 2015	Error was corrected in Section on Prior and concomitant treatment from "During the study, the use of topical corticosteroids and NSAIDs in the study eye to treat an active ocular condition other than the CNV is permitted" to "...other than the ME is permitted". Section on risks and benefits was updated. Several typo corrections together with an administrative update were implemented.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
