

Clinical trial results:

Relative bioavailability trial to investigate the pharmacokinetics of tapentadol following the administration of 3 prototype tapentadol 25 mg prolonged release (PR) granule formulations compared to a Palexia® PR 25 mg tablet in healthy adult subjects.

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	25 February 2016
Is this the analysis of the primary completion data?	Yes
Primary completion date	15 June 2015
Global end of trial reached?	Yes
Global end of trial date	15 June 2015
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective of the trial is to assess the pharmacokinetics and relative bioavailability of tapentadol following administration of 3 prototype tapentadol PR granule formulations (test formulations) each containing 25 mg tapentadol, compared to 1 tablet of Palexia® PR 25 mg (reference formulation).

This trial was conducted in two parts:

Part 1 in fasted condition with a 4-treatment, 4-period crossover design

Part 2 in fed condition with a 3-treatment, 3-period crossover design

Each part includes a different set of male subjects.

No endpoint was defined for this trial.

The main pharmacokinetic target parameters were C_{max} and AUC_{0-t} for tapentadol. In addition, the analyses of AUC for tapentadol will be reported.

Protection of trial subjects:

The trial was conducted according to ICH-GCP guidelines, the applicable local law, and in accordance with the ethical principles that have their origins in the Declaration of Helsinki.

National regulations and national authorization was obtained.

Background therapy:

Any prescribed or non-prescribed medications (excluding topical medications or nasal sprays without systemic effect) used on a regular basis within 14 days and Monoamine oxidase inhibitors used within 21 days before the Enrollment Visit were forbidden.

Concomitant medications allowed during the trial were:

- Paracetamol (e.g., for headache).
- Treatments for nausea or vomiting, according to standard medical practice.
- Topical medications without systemic effect.
- Nasal sprays without systemic effect.
- Naloxone, which may be administered as rescue medication for clinically significant respiratory depression requiring emergency medical intervention.

Forbidden concomitant medication during the trial were:

- Regular use of any prescribed or non-prescribed medications (excluding topical medications or nasal sprays without systemic effect) after the Enrollment Visit.

Evidence for comparator:

PALEXIA® prolonged release is indicated for the management of severe chronic pain in adults, which can be adequately managed only with opioid analgesics.

The dosing regimen should be individualised according to the severity of pain being treated, the previous treatment experience and the ability to monitor the patient.

Actual start date of recruitment	27 January 2015
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Germany: 48
Worldwide total number of subjects	48
EEA total number of subjects	48

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	48
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

The trial started on 27 Jan 2015 with the first subject in (in Part 1) and was completed on 15 Jun 2015 with the last subject out (from Part 2).

Each part of the trial included a different set of 24 healthy male subjects.

Pre-assignment

Screening details:

A total of 114 subjects signed an informed consent form and were involved in /undergoing the enrollment visit procedure. 66 subjects dropped out before allocation to treatment.

Pre-assignment period milestones

Number of subjects started	114 ^[1]
Number of subjects completed	48

Pre-assignment subject non-completion reasons

Reason: Number of subjects	Elevated systolic blood pressure and heart rate: 1
Reason: Number of subjects	Inclusion criteria not met/exclusion criteria met: 48
Reason: Number of subjects	Private reason: 8
Reason: Number of subjects	Supernumerous subject: 9

Notes:

[1] - The number of subjects reported to have started the pre-assignment period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: 114 subjects signed an informed consent = Pre-assignment period.

A total of 48 healthy Caucasian male subjects aged between 18 years and 55 years inclusive, with 24 subjects in Part 1 and Part 2, respectively, entered the 'Overall Trial' period and received IMP (Investigational medicinal product)

Pharmacokinetic data was obtained for all of these subjects.

Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Part 1_in fasted condition

Arm description:

Part 1 had a 4-treatment, 4-period crossover single dose design to assess the relative bioavailability of 3 prototype tapentadol prolonged-release (PR) granule formulations (test formulations) compared to 1 tablet of Palexia® prolonged-release (PR) 25 mg (reference formulation) under fasted condition.

This arm includes all subjects allocated to treatment sequences in Part 1 with at least 1 IMP administration.

The treatment codes were defined as followed:

C – Palexia® 25 mg prolonged-release tablet

T1 – Tapentadol 25 mg prolonged-release granules 15% coating level

T2 – Tapentadol 25 mg prolonged-release granules 20% coating level

T3 – Tapentadol 25 mg prolonged-release granules 25% coating level

Arm type	Experimental
----------	--------------

Investigational medicinal product name	Tapentadol 25 mg prolonged-release granules 15% coating level
Investigational medicinal product code	CG5503
Other name	
Pharmaceutical forms	Granules
Routes of administration	Oral use

Dosage and administration details:

Subjects received a single oral dose of Tapentadol PR 25 mg granules with coating 15% under fasted condition.

Statistical analysis description:	
The statistical analysis of pharmacokinetic parameters was an analysis of variance (ANOVA) of the parameter AUC0-t in the Pharmacokinetic Set of Part 1 (PK set 1). The analysis has been performed using log transformed values. The ANOVA model was fitted to the data with AUC0-t as the dependent variable, and the effects due to treatment sequence group, period, treatment, and subjects nested within sequence as fixed effects.

Other pre-specified: Primary statistical analysis of pharmacokinetic parameters_AUC

End point title	Primary statistical analysis of pharmacokinetic parameters_AUC
-----------------	--

End point description:

Pharmacokinetic analysis of AUC of tapentadol.

The Pharmacokinetic Sets (PK Set) comprised all subjects providing sufficient data, i.e., at least C_{max} or AUC_{0-t}, to compare at least 1 of the test formulations with the reference formulation for the Pharmacokinetic Sets of Part 1 (PK Set 1) and Part 2 (PK Set 2), respectively.

Subjects were excluded from the statistical analysis of AUC if the proportion of the extrapolated area of the AUC exceeded 20%.

Therefore, the number of subject was reduced to N=22 in the subgroup "PK Set 1_fasting_20% coating versus Palexia® PR" and to N=21 in the subgroup "PK Set 1_fasting_25% coating versus Palexia® PR".

Note:

Due to the crossover design, the same subjects received different treatments within each part.

The number of subjects included in the treatment comparisons of AUC is not correct as automatically calculated by the system. The correct figure is always given in the analysis description of the different treatment comparisons.

End point type	Other pre-specified
----------------	---------------------

End point timeframe:

Blood for pharmacokinetic analysis was taken up to 32 hours after IMP administration.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Any adverse event starting at the time of the first intake of tapentadol formulation until the time of the subject-related end of trial, including the washout between periods.

Adverse event reporting additional description:

The absolute and relative frequencies of subjects with any TEAEs were determined within each treatment. If an adverse event lasted longer than 1 treatment period (including washout) then it was assigned to the treatment of the period in which it first occurred.

Assessment type	Systematic
