Notes:

**Paediatric regulatory details**

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No	No

Notes:

**Results analysis stage**

Analysis stage	Final
Date of interim/final analysis	31 December 2019
Is this the analysis of the primary completion data?	Yes
Primary completion date	31 July 2019
Global end of trial reached?	Yes
Global end of trial date	31 July 2019
Was the trial ended prematurely?	No

Notes:

**General information about the trial**

Main objective of the trial:

To assess VTE recurrence in SELECTeD cancer patients at risk of recurrence of VTE treated with rivaroxaban or dalteparin

Protection of trial subjects:

A detailed safety analysis was conducted after the first 220 patients. Confidential reports including recruitment, protocol compliance, safety and outcome data were reviewed by the IDMC throughout the trial.

Background therapy:

In 2013 when select-d started, the standard treatment and prevention of recurrence venous thromboembolism (VTE) in the cancer population (in the Western world) was low molecular weight heparin (LMWH) which is administered by subcutaneous injection. This was based on the CLOT study (Lee et al, 2003) published a decade earlier which showed that the LMWH, dalteparin, was more effective than an oral anticoagulant in reducing the risk of recurrent thromboembolism without increasing the risk of bleeding. Dalteparin was the only LMWH licensed for use in cancer patients at that time.

Evidence for comparator:

The direct oral anticoagulants – the direct thrombin inhibitor, dabigatran and Factor Xa inhibitors, rivaroxaban and apixaban were emerging as 'novel' anticoagulants for treatment of all patients with VTE in 2013. The phase III trials of rivaroxaban vs short-term LMWH followed by warfarin for treatment of VTE, 'EINSTEIN', were large (>4000 patients) and included ~5% of cancer patients. The standard treatment of warfarin was not standard for cancer patients. However, the efficacy and safety of warfarin and rivaroxaban were similar. Head to head trials of rivaroxaban and LMWH were recommended in the pooled 'EINSTEIN' trials (Prins et al, 2013); select-d was thus begun.

Actual start date of recruitment	01 October 2013
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

**Population of trial subjects****Subjects enrolled per country**

Country: Number of subjects enrolled	United Kingdom: 406
Worldwide total number of subjects	406
EEA total number of subjects	406

Notes:

<b>Subjects enrolled per age group</b>	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	143
From 65 to 84 years	255
85 years and over	8

## Subject disposition

### Recruitment

Recruitment details:

Patients with active cancer with a primary presentation of VTE were recruited from 61 participating sites, between September 2013 and December 2016.

### Pre-assignment

Screening details:

Screening Logs were maintained to document all patients considered for the trial but subsequently excluded. Where possible, the reason for non-entry to the trial was documented. Patient names, hospital numbers or other personal identifiers were not recorded, only initials.

### Period 1

Period 1 title	First randomisation to 6 months
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Dalteparin

Arm description:

Modes of action

Dalteparin sodium is an antithrombotic agent, which acts mainly through its ability to potentiate the inhibition of Factor Xa and thrombin by antithrombin. It has a relatively higher ability to potentiate Factor Xa inhibition than to prolong plasma clotting time (APTT).

Therapeutic indication

- Peri- and post-operative surgical thromboprophylaxis.
- The prophylaxis of proximal deep venous thrombosis in patients bedridden due to a medical condition, including, but not limited to; congestive cardiac failure (NYHA class III or IV), acute respiratory failure or acute infection, who also have a predisposing risk factor for venous thromboembolism such as age over 75 years, obesity, cancer or previous history of VTE.
- Patients with solid tumours: Extended treatment of symptomatic venous thromboembolism (VTE) and prevention of its recurrence.

Doses

Month 1: 200 IU/kg total body weight once daily, using fixed dose syringes.

Months 2-6: 150 IU/kg once daily

Arm type	Active comparator
Investigational medicinal product name	Dalteparin
Investigational medicinal product code	Dalteparin
Other name	Fragmin
Pharmaceutical forms	Suspension for injection in pre-filled injector
Routes of administration	Subcutaneous use

Dosage and administration details:

Doses

Month 1: 200 IU/kg total body weight once daily, using fixed dose syringes.

Months 2-6: 150 IU/kg once daily using fixed dose syringes.

Route of administration

Subcutaneous injection, preferably into the abdominal subcutaneous tissue or into the lateral part of the thigh.

Formulation

- Fragmin 5,000 IU
- Fragmin 7,500 IU/0.3 ml solution for injection
- Fragmin 10,000 IU/0.4 ml solution for injection
- Fragmin 12,500 IU/0.5 ml solution for injection
- Fragmin 15,000 IU/0.6 ml solution for injection
- Fragmin 18,000 IU/0.72 ml solution for injection

<b>Arm title</b>	Rivaroxaban
------------------	-------------

Arm description:

Modes of action

Rivaroxaban is a highly selective direct factor Xa inhibitor with oral bioavailability. Inhibition of factor Xa interrupts the intrinsic and extrinsic pathway of the blood coagulation cascade, inhibiting both thrombin formation and development of thrombi. Rivaroxaban does not inhibit thrombin (activated Factor II) and no effects on platelets have been demonstrated.

Therapeutic indication

- Prevention of stroke and systemic embolism in adult patients with non-valvular atrial fibrillation with one or more risk factors, such as congestive heart failure, hypertension, age  $\geq$  75 years, diabetes mellitus, prior stroke or transient ischaemic attack.
- Treatment of deep vein thrombosis (DVT) and pulmonary embolism (PE), and prevention of recurrent DVT and PE in adults.

Arm type	Experimental
Investigational medicinal product name	Rivaroxaban
Investigational medicinal product code	Rivaroxaban
Other name	Xarelto
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Doses

15mg twice daily for the first three weeks.

20mg once daily for the remainder of the 6 month treatment period.

Route of administration

Oral

Formulation

- Xarelto 15 mg film-coated tablets
- Xarelto 20 mg film-coated tablets

<b>Number of subjects in period 1</b>	Dalteparin	Rivaroxaban
Started	203	203
Completed	203	203

## Period 2

Period 2 title	Second randomisation from 6 months
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Investigator, Subject, Monitor, Carer, Assessor

Blinding implementation details:

Rivaroxaban and placebo were packaged and delivered by an external company (Sharp Clinical, Wales) to the participating sites with a drug pack number on tablet bottle.

When a patient was recruited to the second randomisation, the randomisation officer supplied the drug pack number, confirmed by email and faxed the notification to the site pharmacy department.

## Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

<b>Arm title</b>	Placebo
------------------	---------

Arm description:

Placebo after 6 months of initial anticoagulation therapy

Arm type	Placebo
Investigational medicinal product name	placebo
Investigational medicinal product code	placebo
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

no dose

oral - one tablet, once a day

<b>Arm title</b>	Rivaroxaban
------------------	-------------

Arm description:

Rivaroxaban after initial 6 months of anticoagulation therapy

Arm type	Experimental
Investigational medicinal product name	Rivaroxaban
Investigational medicinal product code	Rivaroxaban
Other name	Xarelto
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Doses

15mg twice daily for the first three weeks.

20mg once daily for the remainder of the 6 month treatment period.

Route of administration

Oral

Formulation

- Xarelto 15 mg film-coated tablets

- Xarelto 20 mg film-coated tablets

Number of subjects in period 2 <sup>[1]</sup>	Placebo	Rivaroxaban
Started	46	46
Completed	46	46

Notes:

[1] - The number of subjects starting the period is not consistent with the number completing the preceding period. It is expected the number of subjects starting the subsequent period will be the same as the number completing the preceding period.

Justification: Justification. Period 2 was a second randomisation for participants who finished the first - patient status and choice, and clinician preference meant that the numbers for the second randomisation of further anticoagulation versus placebo, were much smaller.

## Baseline characteristics

Notes:

[1] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: The numbers exposed was different because the total of those exposed was the number of patients that research team had a trial investigation form and therefore had information on non-serious AEs. The patients without trial investigation forms, the research team did not know whether they suffered any non-serious AEs or not.

[2] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: The numbers exposed was different because the total of those exposed was the number of patients that research team had a trial investigation form and therefore had information on non-serious AEs. The patients without trial investigation forms, the research team did not know whether they suffered any non-serious AEs or not.

[3] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: The numbers exposed was different because the total of those exposed was the number of patients that research team had a trial investigation form and therefore had information on non-serious AEs. The patients without trial investigation forms, the research team did not know whether they suffered any non-serious AEs or not.

exposed for the reporting group. These numbers are expected to be equal.

Justification: The numbers exposed was different because the total of those exposed was the number of patients that research team had a trial investigation form and therefore had information on non-serious AEs. The patients without trial investigation forms, the research team did not know whether they suffered any non-serious AEs or not.

[16] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: The numbers exposed was different because the total of those exposed was the number of patients that research team had a trial investigation form and therefore had information on non-serious AEs. The patients without trial investigation forms, the research team did not know whether they suffered any non-serious AEs or not.

[17] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: The numbers exposed was different because the total of those exposed was the number of patients that research team had a trial investigation form and therefore had information on non-serious AEs. The patients without trial investigation forms, the research team did not know whether they suffered any non-serious AEs or not.

[18] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: The numbers exposed was different because the total of those exposed was the number of patients that research team had a trial investigation form and therefore had information on non-serious AEs. The patients without trial investigation forms, the research team did not know whether they suffered any non-serious AEs or not.

[19] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: The numbers exposed was different because the total of those exposed was the number of patients that research team had a trial investigation form and therefore had information on non-serious AEs. The patients without trial investigation forms, the research team did not know whether they suffered any non-serious AEs or not.

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
30 September 2016	<p>Amended protocol to reflect new reduced sample size of 400 and included statistical justification.</p> <p>Updated wording on secondary end points 'VTE recurrence rates for 12 months and 6 months treatment' and 'VTE recurrence rates for RVT and no RVT' was removed, as these were considered analyses of the primary endpoint for different subgroups rather than secondary endpoints.</p> <p>Updated primary outcome measure wording to VTE recurrence (including symptomatic VTE and incidental PE).</p> <p>Updated exclusion criteria.Changes included:</p> <ul style="list-style-type: none"><li>- Addition of the exclusion criterion 'Patients with primary oesophageal or gastro-oesophageal cancer'. Please see Notification of Substantial Amendment Form for justification.</li><li>- Clarification that patients are excluded if they are taking any treatment dose of anticoagulants.</li><li>- Addition of 'dual antiplatelet therapy' exclusion criterion</li><li>- Extension of the time window between starting anticoagulant for the episode of VTE and the planned randomised treatment start time, to 96 hours where necessary</li><li>- Addition of 'Patients with a previous history of VTE' as an exclusion criterion</li><li>- Addition of 'Body weight &lt; 40kg at time of venous thromboembolic event' as an exclusion criterion</li></ul> <p>Updated inclusion criteria. Changes included:</p> <ul style="list-style-type: none"><li>- Clarification that DVT must be a lower extremity proximal DVT</li><li>- An update to the units used for haemoglobin (Hb)</li><li>- Minor change in creatinine clearance value (changed from &gt; 30 ml per minute to ≥ 30ml per minute)</li></ul> <p>Updated inclusion of sub study. The aim of this sub study is to provide qualitative data on the experiences of patients receiving an anticoagulant as part of the select-d trial and their family carers, to complement the safety and efficacy data derived from the main trial.</p> <p>Added ISRCTN number.</p>

Notes:

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

This was a pilot study and therefore not powered to test the differences.

Notes:
