Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	16 April 2018
Is this the analysis of the primary completion data?	Yes
Primary completion date	15 March 2018
Global end of trial reached?	Yes
Global end of trial date	15 March 2018
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The efficacy of a capecitabine plus bendamustine combination regimen in the treatment of Her2-negative advanced metastatic breast cancer, in terms of overall response rates (complete or partial Response)

Protection of trial subjects:

Safety assessments were scheduled 3-weekly during treatment until 28 days after end of study treatment. Recommendations for dose modifications in case of toxicity were done in protocol. Only patients with adequate haematology, liver and renal function could have been included. Patients with known hypersensitivity to the study drugs capecitabine and bendamustine or their excipients were excluded from study participation.

Background therapy:

Capecitabine was dosed at 1000mg/m² twice daily for 14 days, followed by a 7-day rest period for a total cycle time of 21 days (until disease progression or unacceptable toxic effects).

Evidence for comparator:

None.

Actual start date of recruitment	09 August 2013
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Austria: 40
Worldwide total number of subjects	40
EEA total number of subjects	40

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0

Adolescents (12-17 years)	0
Adults (18-64 years)	26
From 65 to 84 years	14
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

In stage 1 of AGMT MBC-6, 20 patients were recruited from September 2013 to July 2014 in Austria. Fulfilling the efficacy criterion, the study was continued enrolling another 20 patients from October 2014 to May 2015 (Stage 2). A total of 40 patients were recruited in eight Austrian centers.

Pre-assignment

Screening details:

Female patients, age ≥ 18 years were screened. The patients had to have advanced or metastatic Her2-negative breast cancer, histologically confirmed and had to be progredient after anthracycline and/or taxane treatment (palliative or neoadjuvant or adjuvant).

Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	Bendamustin/Capecitabine
-----------	--------------------------

Arm description:

Bendamustin in addition to backbone capecitabine, followed by capecitabine monotherapy.

Arm type	Experimental
Investigational medicinal product name	Bendamustin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for concentrate for solution for injection/infusion
Routes of administration	Intravenous use

Dosage and administration details:

Bendamustine 80mg/m² were administered on day 1 and 8 of a three week cycle (for a maximum of eight cycles).

Investigational medicinal product name	Capecitabine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Capecitabine was dosed at 1000mg/m² twice daily for 14 days, followed by a 7-day rest period for a total cycle time of 21 days (until disease progression or unacceptable toxic effects).

Number of subjects in period 1	Bendamustin/Capecitabine
Started	40
Completed	27
Not completed	13
Adverse event, serious fatal	1
Physician decision	3
Consent withdrawn by subject	5

Therapy paused for more than 2 cycles	1
Adverse event, non-fatal	3

Baseline characteristics

Reporting groups

Reporting group title	Overall trial
Reporting group description: -	

Reporting group values	Overall trial	Total	
Number of subjects	40	40	
Age categorical			
Units: Subjects			
In utero		0

End points

End points reporting groups

Reporting group title	Bendamustin/Capecitabine
Reporting group description:	
Bendamustin in addition to backbone capecitabine, followed by capecitabine monotherapy.	

Primary: Overall Response Rate

End point title	Overall Response Rate ^[1]
End point description:	
Overall tumor response rates (complete response (CR) or partial response (PR), determined by radiologic evaluation according to Response Evaluation Criteria in Solid Tumors (RECIST 1.1))	
End point type	Primary

End point timeframe:

Best response evaluated from start of study therapy until end of study participation (progression or withdrawal).

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: No statistical analysis is provided as this is a one armed, open label, non-comparative study.

According to the pre-specified design, the regimen was concluded to be efficacious since 18 responses were observed in the study exceeding the efficacy criterion of 13 or more responses out of 40 at the end of trial.

End point values	Bendamustin/Capecitabine			
Subject group type	Reporting group			
Number of subjects analysed	40			
Units: Patients				
CR	1			
PR	17			

Statistical analyses

No statistical analyses for this end point

Adverse events

Adverse events information

Timeframe for reporting adverse events:

All patients having received at least one dose of the study medication were followed for (serious) adverse events for 28 days after discontinuing study treatment or completion of study treatment.

Adverse event reporting additional description:

Progression of disease (including death due to the underlying malignant disease) was not to be regarded as SAE.

Due to the seriousness of the disease, certain conditions defined as SAEs were excluded from expedited reporting i.e.: elective hospitalization and surgery for treatment of disease or to simplify treatment or study procedures.

Assessment type	Systematic
