

Clinical trial results:

A two part, double blind, placebo controlled, study to assess the safety, tolerability, pharmacokinetics and pharmacodynamic effects of multiple doses of QBM076 in patients with Chronic Obstructive Pulmonary Disease (COPD)

Summary

EudraCT number	2012-005615-92
Trial protocol	DE GB BE NL HU
Global end of trial date	12 June 2015

Results information

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	12 June 2015
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	12 June 2015
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

Part 1: To evaluate the safety and tolerability of multiple ascending doses of QBM076 in current or ex-smoking patients with stable chronic bronchitis COPD with spirometry grades I-III (according to the current GOLD strategy (GOLD 2013)) for 14 consecutive days of treatment

Part 2: To evaluate the preliminary efficacy of 8 consecutive weeks of QBM076 in current or ex-smoking patients with stable chronic bronchitis COPD with spirometry grades I-III (according to the current GOLD strategy (GOLD 2013)): Lung Clearance Index (LCI); absolute neutrophil count in sputum ; spirometry FEV1; TDI.

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and the International Conference on Harmonization (ICH) Good Clinical Practice (GCP) guidelines. All the local regulatory requirements pertinent to safety of trial subjects were also followed during the conduct of the trial.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	27 November 2013
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Germany: 37
Country: Number of subjects enrolled	United Kingdom: 7
Country: Number of subjects enrolled	Romania: 4
Worldwide total number of subjects	48
EEA total number of subjects	48

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0

Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	26
From 65 to 84 years	22
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

In part 1, participants were randomly assigned to one of two treatment arms in a ratio of 3:1 for each cohort. In part 2, participants were stratified by smoking status (current versus ex-smoker) and randomized in a ratio of 2:1 into one of two treatments.

Period 1

Period 1 title	Part 1 and Part 2 (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	QBM076 Part 1 Cohort 1

Arm description:

Participants received QBM076 25 mg bid for 14 days.

Arm type	Experimental
Investigational medicinal product name	QBM076
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

25 mg twice daily (bid) for 14 days.

Arm title	QBM076 Part 1 Cohort 2
------------------	------------------------

Arm description:

Participants received QBM076 75 mg bid for 14 days.

Arm type	Experimental
Investigational medicinal product name	QBM076
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

75 mg bid for 14 days

Arm title	QBM076 Part 1 Cohort 3
------------------	------------------------

Arm description:

Participants received QBM076 150 mg bid for 14 days.

Arm type	Experimental
Investigational medicinal product name	QBM076
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

150 mg bid for 14 days

Arm title	Placebo Part 1
------------------	----------------

Arm description:

Participants in each cohort received matching placebo bid for 14 days.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Participants in each cohort received matching placebo bid for 14 days.

Arm title	QBM076 Part 2
------------------	---------------

Arm description:

Participants received QBM076 150 mg bid for 8 weeks.

Arm type	Experimental
Investigational medicinal product name	QBM076
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Participants received QBM076 150 mg bid for 8 weeks.

Arm title	Placebo Part 2
------------------	----------------

Arm description:

Participants received matching placebo bid for 8 weeks.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Participants received matching placebo bid for 8 weeks.

Secondary: Change from baseline in Lung Clearance Index 2.5 (LCI2.5) (Part 1)

End point title	Change from baseline in Lung Clearance Index 2.5 (LCI2.5) (Part 1) ^[28]
-----------------	--

End point description:

Lung clearance index (LCI) is a measure of abnormal ventilation distribution derived from the multiple breath inert gas washout (MBW) technique. LCI is equal to the cumulative expired volume/functional residual capacity. LCI was measured at baseline and day 14. LCI was analyzed using a Bayesian model for repeated measurements. The model may investigate effects for pre-dose baseline, treatment, time, age, COPD class, treatment by time interaction, and baseline by time interaction. A positive change from baseline indicates improvement.

End point type	Secondary

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
21 October 2013	Amendment 1, issued before the first patient was screened, introduced the following changes: clarified that the dose chosen for Part 2 did not exceed the MTD determined from Part 1; male contraceptive requirements were revised; exclusion criteria for tuberculosis was added; clarified that repeated administration of a dose level was only permitted as long as no stopping criteria were met in the previous cohort; and clarified that for individual patient withdrawal, investigator discretion was no longer permitted.
20 November 2013	Amendment 2 issued before the first patient was screened, introduced the following change(s): Sample logs were removed from the protocol and were included in the study reference manual, this resulted in updates to the assessment schedule. The deviation window for the MRI scan at baseline was increased to within 14 days prior to baseline visit. Caffeine restrictions for 4 hours prior to the start of lung function testing were added in on days the patient attended the clinic. All meal time data were to be entered into the eCRF following collection on the patient diary. Clarified that waist and hip circumference was measured in centimeters. Clarified that glucose was fasted when performed as part of safety laboratory tests. Clarified that urine albumin was measured at screening as per exclusion criteria. Clarified that FEV1 and FVC did not need to be repeated by whole body plethysmography, because they were measured during spirometry. Clarified that a second set of spirometry measurements for reversibility was only applicable at the screening visit. Other minor corrections and correction of typographical errors.
05 March 2014	Amendment 3, issued when Cohort 1 had completed and 6 patients were ongoing in Cohort 2, introduced the following changes: Stopping criteria specific to COPD were added as requested by BfArM during review of the protocol. Inclusion of smokers into Part 2 to more closely reflect the population of patients that required treatment for COPD. Revisions were also made to the inclusion and exclusion criteria. Creatinine clearance was lowered because neither the drug nor the metabolites have shown evidence of renal clearance. Further, the target patient population is likely to have mild to moderate renal insufficiency. Hence we would like to examine the safety, tolerability and efficacy of the drug on in patients with creatinine clearance ≥ 30 mL/min. The list of potentially excluded medications was revised to focus on strong inhibitors and inducers of cytochrome 3A4 (CYP3A4).
07 July 2014	Amendment 4 was issued after all patients had started Cohort 3. The main purpose of this amendment was to remove the use of hyperpolarized helium-3 MRI and to provide the maximum proposed QBM076 dose intended for Part 2. Following feedback from the FDA, it was recognized that there was insufficient justification to conduct this exploratory assessment (hyperpolarized helium-3 MRI) in the setting of an exploratory clinical trial. Revisions were also made to clarify the use of fed state vs. fasted state in earlier and ongoing clinical trials.
23 October 2014	Amendment 5 was issued after the completion of Part 1. The main purpose of this amendment was to include data from pivotal embryo-fetal toxicity studies which allowed women of child bearing potential to participate in the study as long as they used effective contraception methods (with the exception of hormonal contraceptives, due to the risk of drug-drug interaction with QBM076) as defined in the protocol. In addition, the dose QBM076 to be tested in Part 2 of the study was confirmed as 150 mg bid x 8 weeks. Revisions were also made to clarify the term "chronic bronchitis" based on investigator feedback that the term could be misleading since there are no criteria requiring a level of cough & sputum production. This was revised to require GOLD I-III based on spirometry criteria. Changes were also made to the PD and PK assessment based on results from Part 1; and to study assessments to reduce the overall protocol burden in Part 2.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Part 2 was terminated after 21 patients were enrolled. Three of the 21 patients experienced moderate to severe (up to 17-fold) asymptomatic and reversible elevation of liver transaminase levels after 3 weeks of treatment with QBM076 150 mg bid.
