

Clinical trial results:

A phase III, multicenter, randomized, open-label study of oral LDK378 versus standard chemotherapy in adult patients with ALK-rearranged (ALK-positive) advanced non-small cell lung cancer who have been treated previously with chemotherapy (platinum doublet) and crizotinib

Summary

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	10 November 2023
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	10 November 2023
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective was to compare the antitumor activity of LDK378 versus reference chemotherapy, as measured by progression-free survival (PFS) determined by blinded independent review committee (BIRC) per response evaluation criteria in solid tumors (RECIST) 1.1. Due to EudraCT system limitations, which EMA is aware of, data using 999 as data points in this record are not an accurate representation of the clinical trial results. Please use <https://www.novctrd.com/CtrdWeb/home.nov> for complete trial results.

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and the International Conference on Harmonization (ICH) Good Clinical Practice (GCP) guidelines. All the local regulatory requirements pertinent to safety of trial subjects were also followed during the conduct of the trial.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	28 June 2013
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

EEA total number of subjects	111

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	178
From 65 to 84 years	53
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Enrollment in countries (with number of sites): Belgium (4), Canada (1), France (9), Germany (8), Hong Kong (3), Ireland (2), Israel (2), Italy (10), Japan (12), Republic of Korea (5), Lebanon (1), Netherlands (2), Portugal (1), Russia (3), Singapore (2), Spain (11), Switzerland (2), Turkey (3), United Kingdom (5), United States (13).

Pre-assignment

Screening details:

In the treatment phase, patients were randomized 1:1 to one of the treatment arms (ceritinib or chemotherapy). In the extension treatment phase, only patients randomized to the chemotherapy arm were allowed to crossover to receive ceritinib therapy after BIRC-confirmed, RECIST-defined disease progression.

Period 1

Period 1 title	Treatment Phase (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Ceritinib

Arm description:

Ceritinib 750 mg

Arm type	Experimental
Investigational medicinal product name	Ceritinib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule, hard
Routes of administration	Oral use

Dosage and administration details:

Ceritinib was supplied as 150 mg hard gelatin capsules and was administered orally, fasting, once daily at a dose of 750 mg on a continuous dosing schedule (5 x 150 mg capsules).

Arm title	Chemotherapy
------------------	--------------

Arm description:

Chemotherapy as determined by BIRC

Arm type	Active comparator
Investigational medicinal product name	Docetaxel
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for solution for injection/infusion
Routes of administration	Intravenous use

Dosage and administration details:

Docetaxel, a reconstituted solution, was intravenously administered over 1 hour, at 75 mg/m² every 21 days.

Investigational medicinal product name	Pemetrexed
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for solution for injection/infusion
Routes of administration	Intravenous use

Dosage and administration details:

Pemetrexed, a reconstituted solution, was intravenously administered over 10 minutes at 500 mg/m² every 21 days.

Secondary: Least Squares Mean Scores on the European Organization for Research and Treatment of Cancer's Core Quality of Life Questionnaire (EORTC-QLQC30)

End point title	Least Squares Mean Scores on the European Organization for Research and Treatment of Cancer's Core Quality of Life Questionnaire (EORTC-QLQC30)
-----------------	---

End point description:

The EORTC QLQ-C30 questionnaire contained 30 items and was composed of both multi-item scales and single item measures. These included five functional scales (physical, role, emotional, cognitive, and social functioning), three symptom scales (fatigue, nausea/vomiting, and pain), six single items (dyspnea, insomnia, appetite loss, constipation, diarrhea, and financial impact), and a global health status/quality of life (QoL) scale.

All of the scales and single items ranged from 0 to 100. A high scale score represented a higher response level. Thus, a high score for a functional scale indicated a high/healthy level of functioning, a high score for the QoL indicated high QoL, but a high score for a symptom scale/single item indicated a high level of symptomatology/problems. Data from all collected time points were combined and presented using a repeated measures model for longitudinal data.

Secondary: EORTC QLQ-LC13 Time to Definitive Deterioration

End point title	EORTC QLQ-LC13 Time to Definitive Deterioration
-----------------	---

End point description:

The Lung Cancer module of the EORTC's quality of life questionnaire (EORTC QLQ-LC13) was used in conjunction with the EORTC QLQ-C30 and provided information on an additional 13 items specifically related to lung cancer. The lung cancer module incorporated one multi-item scale to assess dyspnea, and 9 single items assessing pain, coughing, sore mouth, dysphagia, peripheral neuropathy, alopecia, and hemoptysis. All of the domain scores ranged from 0 to 100. A high score indicated a high level of symptoms. QLQ-LC13 time to definitive deterioration was defined as the time from randomization to the earliest date a patient shows a 10 point or higher increase from baseline in any of the ALCLC13 scores related to pain in chest, cough, or dyspnea (with no later change below this threshold), or death due to any cause. Each cycle was 21 days.

Secondary: Least Squares Mean Scores on the Lung Cancer Symptom Scale (LCSS)

End point title	Least Squares Mean Scores on the Lung Cancer Symptom Scale (LCSS)
-----------------	---

End point description:

The LCSS patient scale uses a 24-hour recall period and contains nine items: six measuring major symptoms for lung cancer (appetite loss, fatigue, cough, dyspnea, hemoptysis, pain), and three summary items related to total symptom distress, normal activity status, and overall quality of life. The total scale used is a 100 mm visual analog scale to measure the intensity of patient responses, with zero corresponding to the lowest rating (best status) and 100 representing the highest rating (worst status). The total score was calculated as the mean of the 9 items. Data from all collected time points were combined and presented using a repeated measures model for longitudinal data. Data from all collected time points were combined and presented using a repeated measures model for longitudinal data.

Secondary: Least Squares Mean Scores on the EQ-5D-5L Index

End point title	Least Squares Mean Scores on the EQ-5D-5L Index
End point description:	
The EQ-5D descriptive classification consists of five dimensions of health: mobility, self-care, usual activities, anxiety/depression and pain/discomfort. Patients are requested to select the statement which best describes their condition on that day for each dimension. EQ-5D-5L index scores can range from -0.59 to 1, where 1 is the best possible health state. Each cycle was 21 days. Data from all collected time points were combined and presented using a repeated measures model for longitudinal data.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Adverse events were reported from day of first dose of study medication to last dose of study medication plus 30 days, up to approximately 8 years.

Adverse event reporting additional description:

Consistent with EudraCT disclosure specifications, Novartis has reported, under the serious adverse events field, "number of deaths resulting from adverse events," all those deaths resulting from serious adverse events that are deemed to be causally related to treatment, by the investigator.

Assessment type	Systematic

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
27 August 2013	This protocol amendment was implemented to address the availability of new safety data, to amend the eligible study population, and to clarify sections of the protocol where additional guidance was required.
20 May 2014	This protocol amendment was implemented to expand the inclusion criteria to allow for one (as in the prior version of the protocol) or two prior regimens of cytotoxic chemotherapy (one regimen must have included a platinum doublet) for the treatment of locally advanced or metastatic ALK - positive NSCLC and to allow more than one course of prior crizotinib treatment. Additional amendment items included updated safety information and clarification of sections of the protocol where additional guidance was required; updated safety data in the protocol and associated Informed Consent Form (ICF) to be consistent with the Investigator's Brochure Edition 6 (release 27 November 2013).
23 April 2015	This protocol amendment was implemented to delete the requirement for patients randomized to the chemotherapy arm to wait 31 days before crossing over to the crizotinib treatment arm and provide guidance on ceritinib treatment initiation for crossover patients to allow patients to cross over earlier if eligible. The time window for crossover to ceritinib treatment arm was increased from 56 days to 84 days, to allow for resolution of any adverse events (AEs) to grade ≤ 1 (NCI-Common Terminology Criteria for Adverse Events [CTCAE] v 4.03). In addition, patients who had a World Health Organization (WHO) performance status above 2 or a history of interstitial lung disease or interstitial pneumonitis were not allowed to cross over. Removed "start of new anti-cancer therapy" as an allowable reason to stop collecting tumor assessments. Updated the protocol based on currently available safety data. Pancreatic enzyme elevations (lipase and/or amylase) occur in patients treated with ceritinib. Clinical data suggest that a small proportion (<1%) of patients treated with ceritinib can develop clinical pancreatitis, and the causal role of ceritinib in these cases cannot be excluded. Due to this finding, the protocol was amended to include additional eligibility criteria, dose modification, and follow-up monitoring language for patients who may have experienced this safety finding. Added an evaluation of the anticipated benefits and risks to comply with European Union (EU) clinical trial regulations. Included an additional condition for the final analysis of PFS, requiring that all randomized patients completed at least 12 weeks of follow-up or had discontinued earlier.
11 December 2015	This protocol amendment was implemented to provide follow-up evaluations for hepatic toxicities and work-up guidelines for potential drug-induced liver injury (DILI) cases in order to optimize patient safety. Other changes: Dose guidance modification for QTcF text was updated to provide clarification on monitoring procedure. The secondary objectives and related endpoints were updated to specify that assessment of the antitumor activity of ceritinib versus reference chemotherapy in the brain, as measured by OIRR, IDCR and DOIR, would be as assessed by BIRC neuro-radiologist per modified RECIST 1.1 to allow selecting up to 5 measurable brain lesions as target lesions. In addition, already present information was clarified, where required.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Due to EudraCT system limitations, which EMA is aware of, data using 999 as data points in this record are not an accurate representation of the clinical trial results. Please use <https://www.novctrd.com/CtrdWeb/home.nov> for complete trial results.

Notes:
