

Clinical trial results:

Phase II triple blind placebo controlled RCT of simvastatin treatment for autism in young children with Neurofibromatosis Type 1

Summary

EudraCT number	2012-005742-38
Trial protocol	GB
Global end of trial date	30 November 2015

Results information

Result version number	v1 (current)
This version publication date	13 May 2020
First version publication date	13 May 2020

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	30 November 2015
Is this the analysis of the primary completion data?	Yes
Primary completion date	30 November 2015
Global end of trial reached?	Yes
Global end of trial date	30 November 2015
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The overall research aim is to determine whether treatment with statins improves the ASD phenotype in children with NF1 autism. This aim of this study is to test:

- Acceptability and feasibility of involvement for families of children with NF1 ASD
- The feasibility and acceptability of the assessment protocol
- Treatment effects on intermediate and endpoint behavioural phenotype measures and imaging parameters

The hypothesis is that treatment with statins in young children with NF1 autism will be:

- Feasible, safe and acceptable to families
- Associated with signals of change in brain imaging parameters
- Associated with signals of change in autism and other behavioural symptoms

Protection of trial subjects:

Risks and burdens identified to the participants include the burden of travel to research site, possible distress caused by blood tests and brain scan and the risk associated with the treatment. The protocol has been designed to reduce these risks as following:

Burden of travel: The study has been designed with careful consideration of the burden on the participants. The trial team has sought to keep the burden of the treatment visits and intervention to the absolute minimum possible whilst at the same time ensuring safety of participants. The initial screening will be via postal questionnaire and the followup at 16 weeks via a telephone call in order to reduce the number of participant visits.

Possible distress due to blood tests and brain scan: Experienced paediatric nurses will carry out blood tests. Play therapist will be used to help explain the procedures to the children in a developmentally appropriate way.

Risks associated with medication: Stringent monitoring of adverse effects of medication will be carried out during the course of treatment. This will include both verbal enquiry as well as blood tests. The statin expert on the team (AM) has extensive clinical experience of the use of statins in very young children. He will be available for advice and for monitoring the results of the blood tests.

Confidentiality; The research team will have access to person identifiable information only when they receive the screening pack back from parents. No person identifiable information will be used in any publication/advertisement of the trial. Parents will be explained that all the assessments will be confidential and that confidentiality will be maintained at all times other than when the participant is identified as being at serious risk (such as child protection issues). In such cases, the information will be discussed with the CI and anonymously discussed with the child protection lead nurse at MFT.

Background therapy:

N/A

Evidence for comparator: -

Actual start date of recruitment	30 September 2013
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United Kingdom: 34
Worldwide total number of subjects	34
EEA total number of subjects	34

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	34
Adolescents (12-17 years)	0
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Recruitment start date: 30/09/2013

Recruitment end date: 30/11/2015

Territory: UK only

Pre-assignment

Screening details: -

Pre-assignment period milestones

Number of subjects started	34
----------------------------	----

Number of subjects completed	30
------------------------------	----

Pre-assignment subject non-completion reasons

Reason: Number of subjects	Consent withdrawn by subject: 2
----------------------------	---------------------------------

Reason: Number of subjects	Not NF1 diagnosis: 2
----------------------------	----------------------

Period 1

Period 1 title	Baseline (overall period)
----------------	---------------------------

Is this the baseline period?	Yes
------------------------------	-----

Allocation method	Randomised - controlled
-------------------	-------------------------

Blinding used	Double blind
---------------	--------------

Roles blinded	Subject, Investigator, Carer
---------------	------------------------------

Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

Arm title	Placebo
------------------	---------

Arm description: -

Arm type	Placebo
----------	---------

Investigational medicinal product name	Placebo
--	---------

Investigational medicinal product code	
--	--

Other name	
------------	--

Pharmaceutical forms	Oral suspension
----------------------	-----------------

Routes of administration	Oral use
--------------------------	----------

Dosage and administration details:

N/A - placebo

Arm title	Simvastatin
------------------	-------------

Arm description:

Intervention arm

Arm type	Experimental
----------	--------------

Investigational medicinal product name	Simvastatin
--	-------------

Investigational medicinal product code	PL 00427/0146
--	---------------

Other name	
------------	--

Pharmaceutical forms	Oral suspension
----------------------	-----------------

Routes of administration	Oral use
--------------------------	----------

Dosage and administration details:

0.5mg/kg/dau in a single dose or placebo for 4 weeks. Those showing no significant adverse events after 4 weeks, will be escalated to a dose of 1mg/kg/day to a maximum of 30 mg/day in a single daily dose for a further 8 weeks

Number of subjects in period 1^[1]	Placebo	Simvastatin
Started	16	14
Completed	15	11
Not completed	1	3
Lost to follow-up	1	2
Consent withdrawn	-	1

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: Four participants were withdrawn from the trial prior to randomisation: two withdrew and two proved not to have NF1 diagnosis.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
17 October 2013	<p>Protocol version 3.0</p> <p>Endpoint outcome measures - added Effect on neurocognitive functions as assessed by the judgement of line orientation task and paired associate learning task.</p> <p>First trial visit (week 0) - added Cognitive functions will be assessed using the following neurocognitive measures: Judgement of line orientation task and paired associate learning task (20 minutes), removed genotyping, added Participants will be given stickers to positively reinforce the successful completion of the task. They will also be given a token of appreciation for their time and effort on the trial.</p> <p>Treatment procedures at 4 week visit - added genotyping, removed mononuclear PMAPKinase activity</p> <p>Trial treatment endpoint at 12 weeks - added Behavioural phenotype measures, Blood tests plasma lipids, liver function tests, renal function tests and creatine kinase, mononuclear PMAPKinase activity, Participants will be given a token of appreciation for their time and effort on the trial.</p> <p>Measuring trial endpoints - added Cognitive symptoms (baseline and 12 week endpoint) Assessed using the judgement of line orientation task, paired associate learning task.</p> <p>Data Collection - added Participants' cognitive functions will be assessed using the judgement of line orientation task and paired associate learning task and this will be recorded in the case record form.</p>
30 May 2014	<p>Protocol version 4.0</p> <p>Amendment to patient recruitment age range, from 5-8 years to 4.5- 10.5 years.</p> <p>Cognitive assessment measures added at baseline and 12 weeks (Judgement of line orientation task & Paired associates learning task)</p> <p>Procedure for imaging - If it deemed appropriate, due to difficulties in week 0, the participant may require part of the scan or the entire scan to be performed at week 4.</p> <p>4 week visit (+/- 7 days) - If required brain imaging will be undertaken on the MRI scanner at the CRF without contrast injections or sedation, with support from CRF staff, nursing and play specialists (e.g. if scan at week 0 was incomplete or inadequate)</p>

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
