

## Clinical trial results:

**A multicentre study for the long-term follow-up of HLH patients who received treatment with NI-0501, an anti-interferon gamma monoclonal antibody**

### Summary

EudraCT number	2012-005753-23
Trial protocol	IT CZ DE ES AT SE GB FR NL
Global end of trial date	18 May 2021

### Results information

Result version number	v1 (current)
This version publication date	21 July 2022
First version publication date	21 July 2022

### Trial information

#### Trial identification

Sponsor protocol code	NI-0501-05
-----------------------	------------

#### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT02069899
WHO universal trial number (UTN)	-
Other trial identifiers	US IND: 111015

Notes:

Notes:

### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

---

**Results analysis stage**

---

Analysis stage	Final
Date of interim/final analysis	09 July 2021
Is this the analysis of the primary completion data?	Yes
Primary completion date	18 May 2021
Global end of trial reached?	Yes
Global end of trial date	18 May 2021
Was the trial ended prematurely?	No

Notes:

---

**General information about the trial**

---

Main objective of the trial:

- To monitor the long-term safety profile of NI-0501, hereafter referred to as emapalumab
- To assess hemophagocytic lymphohistiocytosis (HLH) participants' survival after emapalumab treatment
- To assess duration of response to emapalumab treatment (i.e., maintenance of HLH control)
- To assess post-hematopoietic stem cell transplantation (HSCT) outcome measures, if applicable
- To assess background disease activity in participants with secondary forms of HLH
- To study the elimination profile of emapalumab
- To evaluate the pharmacodynamic effects (levels of circulating total interferon gamma [IFN $\gamma$ ])
- To assess the immunogenicity of emapalumab

Protection of trial subjects:

The informed consent form had to be signed by the participant (as required by local law) or by the participant's parents or legally authorized representative prior to any study-related procedures, with the assent of participants who were deemed suitable to provide it, as applicable.

Written informed consent/assent was obtained from all participants or their parents/legally authorized representative prior to enrolment into the study, as dictated by the Declaration of Helsinki.

The method of obtaining and documenting informed consent and the contents of the consent complied with International Conference on Harmonisation-Good Clinical Practice and all applicable regulatory requirement(s).

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	04 August 2014
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

---

**Population of trial subjects**

---

**Subjects enrolled per country**

Country: Number of subjects enrolled	Spain: 3
Country: Number of subjects enrolled	United Kingdom: 4
Country: Number of subjects enrolled	France: 1
Country: Number of subjects enrolled	Italy: 26
Country: Number of subjects enrolled	United States: 24
Worldwide total number of subjects	58
EEA total number of subjects	30

Notes:

<b>Subjects enrolled per age group</b>	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	28
Children (2-11 years)	24
Adolescents (12-17 years)	5
Adults (18-64 years)	1
From 65 to 84 years	0
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

The Enrolled-04 cohort comprised 37 patients treated in Study NI-0501-04, and the Enrolled-06 cohort comprised 14 patients treated in Study NI-0501-06. The Enrolled-CU cohort comprised 7 patients who had previously been treated through a compassionate use (CU) request and were not treated in either Study NI-0501-04 or NI-0501-06.

### Pre-assignment

Screening details:

Participants with HLH who had received at least 1 dose of emapalumab in the context of a previous emapalumab clinical study (NI-0501-04 or NI-0501-06) in which no long-term follow-up was planned, and participants who received emapalumab through CU were enrolled in the current study (NI-0501-05).

### Period 1

Period 1 title	Overall Trial (overall period)
Is this the baseline period?	Yes
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Enrolled-04 Cohort

Arm description:

Participants enrolled in Study NI-0501-04 were invited to participate in long-term follow-up for 1 year after either HSCT or the last administration of emapalumab.

In Study NI-0501-04, participants received emapalumab for 4 to 8 weeks. After the treatment period, participants could have undergone HSCT.

Participants for whom an appropriate donor was not identified by Week 8, or in cases where HSCT was delayed for reasons unrelated to the administration of emapalumab, could continue receiving treatment with emapalumab beyond the foreseen 8 weeks in Study NI-0501-05 at the request of the investigator, providing a favorable benefit/risk assessment of treatment was established.

Treatment with emapalumab was not planned for all enrolled participants. For participants who continued receiving emapalumab in Study NI-0501-05, the dose and timing was either carried forward from the last administered emapalumab dose as part of the parent study, or an adjusted dose was administered.

Arm type	Interventional for selected participants
Investigational medicinal product name	Emapalumab
Investigational medicinal product code	
Other name	NI-0501
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Treatment with emapalumab was not planned for all enrolled participants. For participants who continued receiving emapalumab in the context of Study NI-0501-05, the dose and timing was either carried forward from the last administered emapalumab dose as part of the parent study in which the participant was enrolled, or an adjusted dose was administered, if necessary.

<b>Arm title</b>	Enrolled-06 Cohort
------------------	--------------------

Arm description:

All participants who received at least 1 dose of emapalumab and were monitored for at least 4 weeks after the last drug administration in Study NI-0501-06 were invited to participate for long-term follow-up for 1 year after the last administration of emapalumab.

Participants did not receive emapalumab in the current study (NI-0501-05).

Arm type	No intervention
No investigational medicinal product assigned in this arm	

<b>Arm title</b>	Enrolled-CU Cohort
<p>Arm description:</p> <p>In exceptional cases, at the spontaneous request of a treating physician, compassionate use (CU) treatment with emapalumab was granted to participants who had exhausted all possible treatment options and who could not be enrolled in a clinical study. All participants who received at least 1 dose of emapalumab under these circumstances were invited to participate for long-term follow-up for 1 year after either HSCT or the last administration of emapalumab.</p> <p>Participants could have continued treatment with emapalumab in the context of the current Study (NI-0501-05) while stem cell donor search was ongoing, or if the investigator assessed that continuation of treatment was beneficial.</p>	
Arm type	Interventional for selected participants
Investigational medicinal product name	Emapalumab
Investigational medicinal product code	
Other name	NI-0501
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

**Dosage and administration details:**

Treatment with emapalumab was not planned for all enrolled participants. For participants who continued receiving emapalumab in the context of Study NI-0501-05, the dose and timing was either carried forward from the last administered emapalumab dose as part of the parent study in which the participant was enrolled, or an adjusted dose was administered, if necessary.

<b>Number of subjects in period 1</b>	Enrolled-04 Cohort	Enrolled-06 Cohort	Enrolled-CU Cohort
Started	37	14	7
Treated with emapalumab in current study	22 <sup>[1]</sup>	0 <sup>[2]</sup>	5
Completed	24	13	4
Not completed	13	1	3
Consent withdrawn by subject	2	-	-
Adverse event, non-fatal	6	-	1
Serious adverse event, fatal	1	-	-
No matching reasons found	-	1	-
Withdrew to receive emapalumab in Study NI-0501-CU	-	-	1
Lost to follow-up	1	-	1
Patient transferred to receive transplant	1	-	-
Early termination	1	-	-
Patient death	1	-	-

**Notes:**

[1] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: 22 participants in the Enrolled-04 Cohort were treated with emapalumab in the current study; being treated with emapalumab was not a criterion for study completion.

[2] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: No participants in the Enrolled-06 Cohort were treated with emapalumab in the current study; being treated with emapalumab was not a criterion for study completion.

## Baseline characteristics

### Reporting groups

Reporting group title	Enrolled-04 Cohort
-----------------------	--------------------

#### Reporting group description:

Participants enrolled in Study NI-0501-04 were invited to participate in long-term follow-up for 1 year after either HSCT or the last administration of emapalumab.

In Study NI-0501-04, participants received emapalumab for 4 to 8 weeks. After the treatment period, participants could have undergone HSCT.

Participants for whom an appropriate donor was not identified by Week 8, or in cases where HSCT was delayed for reasons unrelated to the administration of emapalumab, could continue receiving treatment with emapalumab beyond the foreseen 8 weeks in Study NI-0501-05 at the request of the investigator, providing a favorable benefit/risk assessment of treatment was established.

Treatment with emapalumab was not planned for all enrolled participants. For participants who continued receiving emapalumab in Study NI-0501-05, the dose and timing was either carried forward from the last administered emapalumab dose as part of the parent study, or an adjusted dose was administered.

Reporting group title	Enrolled-06 Cohort
-----------------------	--------------------

#### Reporting group description:

All participants who received at least 1 dose of emapalumab and were monitored for at least 4 weeks after the last drug administration in Study NI-0501-06 were invited to participate for long-term follow-up for 1 year after the last administration of emapalumab.

Participants did not receive emapalumab in the current study (NI-0501-05).

Reporting group title	Enrolled-CU Cohort
-----------------------	--------------------

#### Reporting group description:

In exceptional cases, at the spontaneous request of a treating physician, compassionate use (CU) treatment with emapalumab was granted to participants who had exhausted all possible treatment options and who could not be enrolled in a clinical study. All participants who received at least 1 dose of emapalumab under these circumstances were invited to participate for long-term follow-up for 1 year after either HSCT or the last administration of emapalumab.

Participants could have continued treatment with emapalumab in the context of the current Study (NI-0501-05) while stem cell donor search was ongoing, or if the investigator assessed that continuation of treatment was beneficial.

## End points

### End points reporting groups

Reporting group title	Enrolled-04 Cohort
-----------------------	--------------------

Reporting group description:

Participants enrolled in Study NI-0501-04 were invited to participate in long-term follow-up for 1 year after either HSCT or the last administration of emapalumab.

In Study NI-0501-04, participants received emapalumab for 4 to 8 weeks. After the treatment period, participants could have undergone HSCT.

Participants for whom an appropriate donor was not identified by Week 8, or in cases where HSCT was delayed for reasons unrelated to the administration of emapalumab, could continue receiving treatment with emapalumab beyond the foreseen 8 weeks in Study NI-0501-05 at the request of the investigator, providing a favorable benefit/risk assessment of treatment was established.

Treatment with emapalumab was not planned for all enrolled participants. For participants who continued receiving emapalumab in Study NI-0501-05, the dose and timing was either carried forward from the last administered emapalumab dose as part of the parent study, or an adjusted dose was administered.

Reporting group title	Enrolled-06 Cohort
-----------------------	--------------------

Reporting group description:

All participants who received at least 1 dose of emapalumab and were monitored for at least 4 weeks after the last drug administration in Study NI-0501-06 were invited to participate for long-term follow-up for 1 year after the last administration of emapalumab.

Participants did not receive emapalumab in the current study (NI-0501-05).

Reporting group title	Enrolled-CU Cohort
-----------------------	--------------------

Reporting group description:

In exceptional cases, at the spontaneous request of a treating physician, compassionate use (CU) treatment with emapalumab was granted to participants who had exhausted all possible treatment options and who could not be enrolled in a clinical study. All participants who received at least 1 dose of emapalumab under these circumstances were invited to participate for long-term follow-up for 1 year after either HSCT or the last administration of emapalumab.

Participants could have continued treatment with emapalumab in the context of the current Study (NI-0501-05) while stem cell donor search was ongoing, or if the investigator assessed that continuation of treatment was beneficial.

### Primary: Number of Participants With Adverse Events

End point title	Number of Participants With Adverse Events <sup>[1]</sup>
-----------------	---

End point description:

Adverse events were defined as any undesirable experience occurring in a participant during the study, whether or not considered related to emapalumab.

End point type	Primary
----------------	---------

End point timeframe:

From the date of enrollment in this study up to 1 year after either HSCT or the last administration of emapalumab (maximum duration: 639 days)

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: No statistical analysis was carried out; this end point was the number of participants with an adverse event during the study.

End point values	Enrolled-04 Cohort	Enrolled-06 Cohort	Enrolled-CU Cohort	
Subject group type	Reporting group	Reporting group	Reporting group	
Number of subjects analysed	37	14	7	
Units: Participants	37	12	7	

## Statistical analyses

No statistical analyses for this end point

## Secondary: Cumulative Duration of Response

End point title	Cumulative Duration of Response <sup>[2]</sup>
-----------------	--

End point description:

Cumulative duration of response: total number of days in response from 1st achievement of overall response until HSCT or last treatment date if the participant did not undergo HSCT.

Overall response: achievement of either Complete (CR) or Partial Response (PR), or HLH Improvement (HI).

CR: no fever, normal spleen size, no cytopenia (absolute neutrophil count [ANC]  $\geq 1.0 \times 10^9/L$  and platelet count  $\geq 100 \times 10^9/L$ ), no hyperferritinemia (serum ferritin  $< 2000 \mu g/L$ ), no coagulopathy (normal D-dimer and/or fibrinogen  $> 150 \text{ mg/dL}$ ), no neurological and cerebrospinal fluid [CSF] abnormalities attributed to HLH, no sustained worsening of soluble cluster of differentiation (CD) 25.

PR: at least 3 HLH clinical and laboratory criteria (including central nervous system [CNS] abnormalities) met the CR criteria, no progression of other aspects of HLH disease pathology.

HI: improvement ( $> 50\%$  change from baseline) of at least 3 HLH clinical and laboratory abnormalities (including CNS involvement).

End point type	Secondary
----------------	-----------

End point timeframe:

From 1st achievement of overall response until HSCT or last treatment date if participant did not undergo HSCT (maximum duration: 250 days)

Notes:

[2] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: Data were available only for participants in the Enrolled-04 Cohort.

End point values	Enrolled-04 Cohort			
Subject group type	Reporting group			
Number of subjects analysed	37			
Units: day				
arithmetic mean (standard deviation)	70.7 ( $\pm 56.35$ )			

## Statistical analyses

No statistical analyses for this end point

## Secondary: Duration of First Response

End point title	Duration of First Response <sup>[3]</sup>
-----------------	---

End point description:

Duration of first response was defined as the number of days between first date of response and first date of loss of response or death. Response was defined as macrophage activation syndrome (MAS) remission, which was resolution of clinical signs and symptoms according to the investigator (MAS

clinical signs and symptoms score  $\leq 1$ ) and normalization of laboratory parameters relevant to MAS as follows: white blood cells (WBC) and platelet count above the lower limit of normal (LLN), lactate dehydrogenase  $< 1.5 \times$  upper limit of normal (ULN), aspartate aminotransferase/alanine aminotransferase  $< 1.5 \times$  ULN, fibrinogen  $> 100$  mg/dL, ferritin level decreased by at least 80% from values at screening or baseline (whichever was higher) or  $< 2000$  ng/mL, whichever was lower.

End point type	Secondary
----------------	-----------

End point timeframe:

From first date of response and first date of loss of response or death (maximum duration: 416 days)

Notes:

[3] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: Only data from Enrolled-06 Cohort were available.

<b>End point values</b>	Enrolled-06 Cohort			
Subject group type	Reporting group			
Number of subjects analysed	14			
Units: day				
median (inter-quartile range (Q1-Q3))	61 (9.00 to 358.00)			

## Statistical analyses

No statistical analyses for this end point

## Secondary: Overall Survival: Number of Participants Alive

End point title	Overall Survival: Number of Participants Alive
-----------------	--

End point description:

Overall survival was defined as time from the date of last emapalumab dose to the date of death. Participants without an event were censored at the time of last contact or 12 months after last dose (whichever came first). As some participants had their last emapalumab dose in the parent study, data from NI-0501-04, NI-0501-05 and NI-0501-06 studies were considered for the assessment of overall survival.

Kaplan-Meier methodology was used for estimation.

Median overall survival was not reached in any of the groups as 28 of the 37 participants (75.7%) in the Enrolled-04 Cohort, all 14 participants (100.0%) in the Enrolled-06 Cohort, and 5 participants (71.4%) were alive at last observation or 12 months post last dose, whichever came first.

End point type	Secondary
----------------	-----------

End point timeframe:

From the date of last of emapalumab dose to the date of death or last contact or 12 months after last dose, whichever came first (maximum 366 days)

<b>End point values</b>	Enrolled-04 Cohort	Enrolled-06 Cohort	Enrolled-CU Cohort	
Subject group type	Reporting group	Reporting group	Reporting group	
Number of subjects analysed	37	14	7	
Units: Participants	28	14	2	

## Statistical analyses

No statistical analyses for this end point

### Secondary: Post-HSCT outcome indices

End point title	Post-HSCT outcome indices <sup>[4]</sup>
-----------------	--

End point description:

Engraftment failure rate was based on the number of participants experiencing primary or secondary graft failure (blood stem cell transplant failure, engraft failure, or transplant dysfunction), as reported as an adverse event.

Achievement of donor chimerism was considered based on donor chimerism in peripheral blood completed, that is, donor cells >95%.

The number of participants who reported graft-versus-host-disease as an AE in Study NI-0501-05 provided the occurrence of graft-versus-host-disease.

End point type	Secondary
----------------	-----------

End point timeframe:

From HSCT to 12 months post-HSCT

Notes:

[4] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period. Justification: Only participants in the Enrolled-04 and Enrolled-CU cohorts underwent HSCT.

End point values	Enrolled-04 Cohort	Enrolled-CU Cohort		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	29 <sup>[5]</sup>	2 <sup>[6]</sup>		
Units: Participants				
number (not applicable)				
Engraftment failure rate	6	1		
Achievement of donor chimerism	22	0		
Occurrence of graft-versus-host-disease	7	2		

Notes:

[5] - Of the 37 participants, 29 (78.4%) underwent HSCT

[6] - Of the 7 participants, 2 (28.6%) underwent HSCT

## Statistical analyses

No statistical analyses for this end point

### Secondary: Background Disease Activity: Macrophage Activation Syndrome in sHLH participants

End point title	Background Disease Activity: Macrophage Activation Syndrome in sHLH participants <sup>[7]</sup>
-----------------	---

End point description:

MAS activity was monitored using a visual analog scale (VAS) ranging from 0 to 10 with a higher score indicating higher disease activity.

End point type	Secondary
----------------	-----------

End point timeframe:

Baseline (first NI-0501-05 visit), Day 100, Month 12/End of Study

Notes:

[7] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period. Justification: The endpoint is relevant only to participants in the Enrolled-06 Cohort.

<b>End point values</b>	Enrolled-06 Cohort			
Subject group type	Reporting group			
Number of subjects analysed	14 <sup>[8]</sup>			
Units: Score on a scale				
arithmetic mean (standard deviation)				
Baseline	0 (± 0)			
Day 100	0 (± 0)			
Month 12/End of Study	0.2 (± 0.48)			

Notes:

[8] - Baseline: 13 participants

Day 100: 12 participants

Month 12/End of Study: 13 participants

### Statistical analyses

No statistical analyses for this end point

### Secondary: Circulating Emapalumab Levels: Enrolled-04 Cohort

End point title	Circulating Emapalumab Levels: Enrolled-04 Cohort <sup>[9]</sup>
-----------------	--

End point description:

Circulating emapalumab levels in participants who continued to receive treatment with emapalumab in the current study (NI-0501-05). Samples were not taken once it had been determined that emapalumab was below the measurable level of 62.5 µg/L.

End point type	Secondary
----------------	-----------

End point timeframe:

First infusion day (infusion duration: 1-2 hours) in Study NI-0501-05, last infusion day (infusion Day 188), 12 months post-transplant

Notes:

[9] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: The endpoint is relevant only to participants in the Enrolled-04 Cohort.

<b>End point values</b>	Enrolled-04 Cohort			
Subject group type	Reporting group			
Number of subjects analysed	37 <sup>[10]</sup>			
Units: µg/L				
arithmetic mean (standard deviation)				
First infusion day (Infusion Day 1)	165148.4 (± 175057.98)			
Last infusion day (Infusion Day 188)	157849.0 (± 66180.28)			
12 months post-transplant	80.5 (± 43.52)			

Notes:

[10] - Day 1: 22 participants

Day 188: 2 participants

12 months post-transplant: 12 participants

Day 100: 10 participants

Month 6: 8 participants

## Statistical analyses

No statistical analyses for this end point

## Secondary: Total Human Interferon Gamma Levels: Enrolled-04 Cohort

End point title	Total Human Interferon Gamma Levels: Enrolled-04 Cohort <sup>[13]</sup>
-----------------	---

End point description:

Concentrations of human interferon gamma (IFN $\gamma$ ) levels for participants in the Enrolled-04 Cohort. IFN $\gamma$  concentrations post-dose are the sum of free and bound IFN $\gamma$ . It should be noted that participants had already been treated with emapalumab at the time of enrollment into Study NI-0501-05. In addition, the number of observations and median values fluctuated, as the duration and the timing of the PD samples varied between participants.

End point type	Secondary
----------------	-----------

End point timeframe:

First infusion day (infusion duration: 1-2 hours) in Study NI-0501-05, Day 100 post-transplant, 12 months post-transplant

Notes:

[13] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: The endpoint is relevant only to participants in the Enrolled-04 Cohort.

Number of subjects analysed	37 <sup>[14]</sup>			
Units: ng/L				
arithmetic mean (standard deviation)				
First infusion day (Infusion Day 1)	5290.4 (± 4992.27)			
Day 100 post-transplant	3613.6 (± 6052.31)			
12 months post-transplant	447.4 (± 1096.99)			

Notes:

[14] - Infusion Day 1: 11 participants

Day 100 post-transplant: 23 participants

12 months: 24 participants

## Statistical analyses

No statistical analyses for this end point

## Secondary: Total Human Interferon Gamma Levels: Enrolled-06 Cohort

End point title	Total Human Interferon Gamma Levels: Enrolled-06 Cohort <sup>[15]</sup>
-----------------	---

End point description:

Concentrations of IFN $\gamma$  levels for participants in the Enrolled-06 Cohort. IFN $\gamma$  concentrations post-dose are the sum of free and bound IFN $\gamma$ . It should be noted that participants had already been treated with emapalumab at the time of enrollment into Study NI-0501-05.

End point type	Secondary
----------------	-----------

End point timeframe:

Baseline (first NI-0501-05 visit), Day 100, Month 12/End of Study

Notes:

[15] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: The endpoint is relevant only to participants in the Enrolled-06 Cohort.

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

From the date of enrollment in this study up to 1 year after either HSCT or the last administration of emapalumab (maximum duration: 639 days)

Assessment type	Systematic
-----------------	------------

### Dictionary used

Dictionary name	MedDRA
-----------------	--------

Dictionary version	23.0
--------------------	------

### Reporting groups

Reporting group title	Enrolled-04 Cohort
-----------------------	--------------------

Reporting group description:

Participants enrolled in Study NI-0501-04 were invited to participate in long-term follow-up for 1 year either after HSCT or the last administration of emapalumab.

In Study NI-0501-04, participants received emapalumab for 4 to 8 weeks. After the treatment period, participants could have undergone HSCT.

For participants for whom an appropriate donor was not identified by Week 8, or in cases where HSCT was delayed for reasons unrelated to the administration of emapalumab, they could continue receiving treatment with emapalumab beyond the foreseen 8 weeks in Study NI-0501-05 at the request of the investigator, providing a favorable benefit/risk assessment of treatment was established.

Treatment with emapalumab was not planned for all enrolled participants. For participants who continued receiving emapalumab in Study NI-0501-05, the dose and timing was either carried forward from the last administered emapalumab dose as part of the parent study, or an adjusted dose was administered.

Reporting group title	Enrolled-06 Cohort
-----------------------	--------------------

Reporting group description:

All participants who received at least 1 dose of emapalumab and were monitored for at least 4 weeks after the last drug administration in Study NI-0501-06 were invited to participate for long-term follow-up for 1 year after the last administration of emapalumab.

Participants did not receive emapalumab in the current study (NI-0501-05).

Reporting group title	Enrolled-CU Cohort
-----------------------	--------------------

Reporting group description:

In exceptional cases, at the spontaneous request of a treating physician, compassionate use (CU) treatment with emapalumab was granted to the participants who had exhausted all possible treatment options and who could not be enrolled in a clinical study. All participants who received at least 1 dose of emapalumab under these circumstances were invited to participate for long-term follow-up for 1 year either after HSCT or after the last administration of emapalumab.

Participants could have continued treatment with emapalumab in the context of the current Study (NI-0501-05) while stem cell donor search was ongoing, or if the investigator assessed that continuation of treatment was beneficial.

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
05 December 2013	<p>United States, Version 2.0</p> <ul style="list-style-type: none"><li>- Modification to reflect increased frequency of visits pre- and post-HSCT; visits initially performed monthly basis were to be performed weekly</li><li>- Addition of flexibility added to the visits to be performed</li><li>- Addition of clarification regarding patients who, in the context of Study NI-0501-05, could continue receiving emapalumab beyond the 8 weeks foreseen in the Study NI-0501-04 protocol or in the NI-0501-CU protocol, including additional flexibility to be given in the assessment to be performed</li><li>- Clarification that vaccinations were to be avoided until emapalumab was detected in serum and of what was not considered a protocol deviation</li><li>- Addition of assessment of clinical response 1 month post-HSCT</li><li>- Addition of consistency of visit description overall design section with explanations on how to adapt the SOA in the event conditioning and possibly the HSCT were performed before patient inclusion in Study NI-0501-05</li><li>- Addition of assessments to be performed, most of which were noninvasive</li><li>- Addition of laboratory parameters of d-Dimers, gamma-glutamyl transferase, and lactate dehydrogenase and removal of proteinemia from safety laboratory assessments</li><li>- Addition of evaluation for viral pathogens every 2 weeks as long as emapalumab was detectable in the serum</li><li>- Addition of chest X-rays to detect tuberculosis at least every 3 weeks until 30 days post-HSCT and potentially at Day 60 post-HSCT, as long as emapalumab was detectable in the serum</li><li>- Addition of text to Section 9.2, clarifying the potential risks linked to treatment applied only to patients receiving emapalumab during Study NI-0501-05</li><li>- Modification of Appendix A for patients still receiving NI-0501, to ensure transition from the on-drug to off-drug part of protocol was clear and accounted for variations in timing for conditioning and HSCT among patients</li><li>- Modification of Appendix B, to clarify dosing regimen was responsibility of sponsor based on PK results</li></ul>

16 December 2013	<p>Europe, Version 2.0</p> <ul style="list-style-type: none"> <li>- Implementation of consistency with the US “twin” protocol to ensure patients in Europe had the same long-term follow-up monitoring as patients in the US and to allow for a combined analysis of the data generated by patients in Europe and the US</li> <li>- Implementation of recommendations made by the NI-0501-04 Scientific Steering Committee and Data Monitoring Committee based on the preliminary data assessment of the first patient enrolled</li> <li>- Modification of study design to increase the frequency of pre- and post-HSCT visits and implement flexibility to ensure assessments were adapted to patients’ condition and emapalumab concentrations detected</li> <li>- Modification of study design to account for patients whose conditioning and HSCT occurred during the short-term follow-up period for Study NI-0501-04</li> <li>- Provide flexibility for the efficacy and safety assessments of patients who continued to receive emapalumab beyond Study NI-0501-04</li> <li>- Clarification: that vaccinations were to be avoided until emapalumab concentration was detectable; surrounding what was not considered a protocol deviation; that stopping rules applied only to patients who continued receiving emapalumab</li> <li>- Addition of assessment of clinical response 1 month post-HSCT</li> <li>- Addition of a 1-week time-window for follow-up visits to be performed beyond 30 days post-HSCT</li> <li>- Specification that unplanned visits might occur to allow for additional assessments or treatment required</li> <li>- Modification of schedule of assessments (SOA) to ensure consistency with text of the protocol</li> <li>- Modification to risk analysis text to clarify potential risks linked to treatment applied only to patients still on treatment during Study NI-0501-05</li> <li>- Modification of Appendix A, SOA for patients still receiving NI-0501, to be consistent with that in Study NI-0501-04 (version 3.0)</li> <li>- Modification of Appendix B, Investigational medicinal produce preparation and handling</li> <li>- Removal of Appendix E, NI-0501-04 protocol</li> </ul>
16 January 2015	<p>Europe, Version 2.1</p> <ul style="list-style-type: none"> <li>- Update to Appendix A, SOA for patients still receiving NI-0501, to ensure consistency with text of protocol regarding recording of physical examination findings and vital sign measurements at each visit</li> </ul>
11 February 2015	<p>United States, Version 2.2</p> <ul style="list-style-type: none"> <li>- Refer to the changes made under Europe amendment version 2.1, as the same modifications were made</li> </ul>

26 October 2017	<p>Europe, Version 3.0</p> <ul style="list-style-type: none"> <li>- Addition of information regarding MAS to study rationale and update of studies included in clinical development program</li> <li>- Update of study objectives to include assessment of duration of response, post-HSCT outcome measures, background of disease activity, PD effects and the profile of relevant HLH biomarkers</li> <li>- Update to study design to expand the patient population to include subjects who participated in a previous emapalumab clinical study in which no long-term follow up was already planned and to state that patients having received emapalumab under the NI-0501-CU protocol could also be considered for enrollment whenever appropriate</li> <li>- Modification of the study design to remove details on the last visit performed and to remove the visits foreseen at the time of HSCT</li> <li>- Addition of details to study design for patients who underwent or were to undergo HSCT and for patients to whom HSCT was not planned</li> <li>- Update to inclusion criteria to include males with partner(s) of childbearing age must have agreed to take appropriate precautions to avoid pregnancy until 6 months after receipt of the last dose of emapalumab</li> <li>- Update to patient background and treatment care to clarify any treatment ongoing at the time of study entry was to be continued as deemed necessary by the Investigator and that patients receiving prophylactic treatments for infections at study entry were to continue therapy as long as emapalumab concentrations are detectable in serum</li> <li>- Clarification there was no restriction in the use of medications, except for live or attenuated-live vaccinations that were to be avoided as long as emapalumab concentrations were detectable in serum</li> <li>- Revision of study endpoints to clarify safety, efficacy, PK, PD, and immunogenicity assessments and to remove clinical response and survival from the monitoring of background disease activity</li> <li>- Removal of select laboratory parameters</li> <li>- Addition of serious criteria to AE assessment and clarification</li> </ul>
31 October 2017	<p>United States, Version 3.0</p> <ul style="list-style-type: none"> <li>- Refer to the changes made under Europe amendment version 3.0, as the same modifications were made</li> </ul>

Notes:

## Interruptions (globally)

Were there any global interruptions to the trial? No

## Limitations and caveats

None reported
