

Clinical trial results:

A randomized comparative, open-label study of intravenous iron isomaltoside 1000 (Monofer®) administered by high single dose infusions or standard medical care in women after postpartum haemorrhage

Due to the EudraCT – Results system being out of service between 31 July 2015 and 12 January 2016, these results have been published in compliance with revised timelines.

Summary

EudraCT number	2012-005782-12
Trial protocol	DK
Global end of trial date	16 December 2014

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	16 December 2014
Is this the analysis of the primary completion data?	Yes
Primary completion date	16 December 2014
Global end of trial reached?	Yes
Global end of trial date	16 December 2014
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective of this study was to compare efficacy of IV high single dose infusion of iron isomaltoside 1000 to standard medical care in women with PPH evaluated as physical fatigue.

Protection of trial subjects:

The protocol and amendments were approved by local ethics committees/Institutional Review Boards and competent authorities. The trial was conducted in accordance with good clinical practice and the Declaration of Helsinki. Informed consent was obtained in writing prior to any trial-related activities.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	03 May 2013
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Denmark: 200
Worldwide total number of subjects	200
EEA total number of subjects	200

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	200
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Subjects were screened in the period 03 May 2013 to 19 September 2015. The trial took place at one site in Denmark.

Pre-assignment

Screening details:

Women who were ≥ 18 years of age with PPH ≥ 700 and ≤ 1000 mL or PPH > 1000 mL and Hb > 6.5 g/dL (4.0 mmol/L) measured > 12 hours after delivery were able to participate.

Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Group A, iron isomaltoside 1000

Arm description:

1200 mg iron isomaltoside 1000 was administered over approximately 15 min as a single IV infusion.

Arm type	Experimental
Investigational medicinal product name	Iron isomaltoside 1000
Investigational medicinal product code	ATC code: B03AC
Other name	Monofer, Monover, Monofar, Monoferro
Pharmaceutical forms	Solution for injection/infusion
Routes of administration	Intravenous use

Dosage and administration details:

1200 mg iron isomaltoside 1000 was administered over approximately 15 min as a single IV infusion. Iron isomaltoside 1000 is available as a dark brown, non-transparent aqueous solution for injection/infusion containing 100 mg iron/mL with pH between 5.0 and 7.0.

Arm title	Group B, standard care
------------------	------------------------

Arm description:

Usually women with PPH are recommended to continue oral iron supplementation as recommended during pregnancy or to take 100 mg oral iron 1-2 times per day for a variable unspecified time period.

Arm type	standard care
No investigational medicinal product assigned in this arm	

Number of subjects in period 1	Group A, iron isomaltoside 1000	Group B, standard care
Started	100	100
Completed	97	99
Not completed	3	1
Consent withdrawn by subject	2	-
Adverse event, non-fatal	1	-
Lost to follow-up	-	1

arithmetic mean (standard deviation)	19 (± 9)	8.8 (± 11.7)		

Statistical analyses

Statistical analysis title	Test for superiority, MMRM
Statistical analysis description: The mixed model for repeated measurements (MMRM) included visit, treatment-by-visit, and PPH (700-1000 mL, >1000 mL) as factors, baseline value as covariate, and subject as random effect.	
Comparison groups	Group A, iron isomaltoside 1000 v Group B, standard care

Number of subjects included in analysis	187
Analysis specification	Pre-specified
Analysis type	superiority
P-value	< 0.0001
Method	MMRM
Parameter estimate	Mean difference (final values)
Point estimate	10.39
Confidence interval	
level	95 %
sides	2-sided
lower limit	7.28
upper limit	13.51

Secondary: Change in transferrin saturation from baseline to week 8

End point title	Change in transferrin saturation from baseline to week 8
End point description:	Change in transferrin saturation from baseline to week 8. Analysis performed on FAS.
End point type	Secondary
End point timeframe:	Change in transferrin saturation from baseline to week 8.

End point values	Group A, iron isomaltoside 1000	Group B, standard care		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	93	97		
Units: Percentage				
arithmetic mean (standard deviation)	20.6 (± 10.3)	12.6 (± 12.5)

Adverse events

Adverse events information

Timeframe for reporting adverse events:

From the time a subject had signed the informed consent form and until she had completed the trial, all AEs/SAEs were reported in the electronic case report form.

Adverse event reporting additional description:

An AE was described in the following manner: The nature of the event will be described in precise, standard medical terminology (i.e. not necessarily the exact words used by the subject). If known, a specific diagnosis was stated. Furthermore the Investigator described an AE regarding seriousness, severity, relatedness, and outcome.

Assessment type	Systematic
-----------------	------------

Dictionary used

Dictionary name	MedDRA
Dictionary version	16.0

Reporting groups

Reporting group title	Group A, iron isomaltoside 1000
-----------------------	---------------------------------

Reporting group description:

1200 mg iron isomaltoside 1000 was administered over approximately 15 min as a single IV infusion.

Reporting group title	Group B, standard care
-----------------------	------------------------

Reporting group description:

Usually women with PPH were recommended to continue oral iron supplementation as recommended during pregnancy or to take 100 mg oral iron 1-2 times per day for a variable unspecified time period.

Serious adverse events	Group A, iron isomaltoside 1000	Group B, standard care	
Total subjects affected by serious adverse events			
subjects affected / exposed	9 / 98 (9.18%)	8 / 100 (8.00%)	
number of deaths (all causes)	0	0	
number of deaths resulting from adverse events	0	0

occurrences (all)	8	3	
Mastitis			
subjects affected / exposed	7 / 98 (7.14%)	8 / 100 (8.00%)	
occurrences (all)	8	10	

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
17 April 2013	<ul style="list-style-type: none">• In order to have a clear and robust primary endpoint, the primary endpoint was changed from change by visit to average aggregated change in physical fatigue score, i.e. calculated as the AUC of the change from baseline to last visit divided by scheduled time from baseline to last visit.• In order to further strengthen the endpoints related to fatigue in the puerperal women, the postpartum questionnaire was included as an additional secondary efficacy end-point.• The maximum storage time for maternal milk samples was added in order to define the scope of the research bio-bank.• Drugs potentially yielding a decrease in oral iron absorption were deleted from the list of prohibited medication during the trial (for the standard medical care treatment group), as the aim of the standard medical care treatment group was to reflect clinical practice.
26 August 2013	<ul style="list-style-type: none">• Inclusion criterion 1 was changed in order to align with current clinical practice: The minimum PPH was increased from 500 mL to 700 mL, and the minimum Hb concentration for subjects with PPH > 1000 mL was decreased from 8.0 g/dL (5.0 mmol/L) to 6.5 g/dL (4.0 mmol/L).• It was specified that only subjects living within a radius of 30 kilometres from the hospital were eligible for inclusion in the trial. This restriction was in order to ease the logistics associated with the visits in the subject's home.• Recording of anaemia and gastrointestinal symptoms was included as an additional objective and endpoint in order to investigate one of the main effects of iron deficiency as well as a well-known adverse effect of oral iron treatment, respectively, within the trial.• Visit windows were enlarged for visit 2 (from ± 8 hours to ± 1 day) and visit 5 (from ± 2 days to ± 1 week) in order to ensure full follow-up for as many subjects as possible.• It was specified that in cases where the infusion of iron isomaltoside 1000 was interrupted, it was allowed to restart the infusion after clinical assessment by the Principal Investigator or sub-investigator.• It was specified that admission to the maternity hotel was not considered to meet the regulatory definition for a SAE due to hospitalisation, and that admission of the new-born to the neonatal intensive care unit was evaluated case by case for seriousness.
11 February 2014	<ul style="list-style-type: none">• Timing of maternal milk sample collection was changed from baseline, day 1, 2, and 3 to day 3 and week 1, and should be done in all subjects when possible. At the time of implementing this amendment, collection of milk samples from baseline and onwards had not been possible in any subjects.• It was specified that a 'current smoker' was defined as smoking within the last 6 months.• The reference document for SARs was changed from the SmPC to the IB for iron isomaltoside 1000, as the trial investigated a new indication for iron isomaltoside 1000.• It was specified that informed consent was obtained either by the investigator or by a project midwife.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
