

Clinical trial results:

A Phase IIIb, randomized, open-label study of the safety and efficacy of dolutegravir/abacavir/lamivudine once daily compared to atazanavir and ritonavir plus tenofovir/emtricitabine once daily in HIV-1 infected antiretroviral therapy naïve women

Summary

EudraCT number	2012-005823-34

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	21 October 2022
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	18 August 2022
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To demonstrate the non-inferior antiviral activity of DTG/ABC/3TC FDC once daily compared to atazanavir (ATV) + Ritonavir (RTV) + tenofovir disoproxil fumarate/emtricitabine (TDF/FTC) FDC each administered once daily over 48 weeks in Human Immunodeficiency Virus Type 1 (HIV-1) infected Antiretroviral Therapy (ART) naïve women

Protection of trial subjects:

Not Applicable

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	22 August 2013
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Russian Federation: 50
Country: Number of subjects enrolled	South Africa: 66
Country: Number of subjects enrolled	Argentina: 44
Country: Number of subjects enrolled	Thailand: 40
Country: Number of subjects enrolled	Italy: 28
Country: Number of subjects enrolled	Spain: 54
Country: Number of subjects enrolled	United States: 134
Country: Number of subjects enrolled	United Kingdom: 25
Country: Number of subjects enrolled	Mexico: 11
Country: Number of subjects enrolled	Canada: 20
Country: Number of subjects enrolled	France: 16
Country: Number of subjects enrolled	Portugal: 9
Country: Number of subjects enrolled	Puerto Rico: 2
Worldwide total number of subjects	499
EEA total number of subjects	107

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	493
From 65 to 84 years	6
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

The study consists of a Screening (14-28 days), Randomized (48 weeks) and Continuation (Cont.) Phase. Participants were said to have completed the study if they completed the Randomized phase and did not enter the Cont. Phase. Participants entering the Cont. Phase were said to have completed the study if they completed both phases of the study.

Pre-assignment

Screening details:

A total of 499 participants were randomized to receive DTG/ABC/3TC FDC or combination of ATV+RTV+TDF/FTC. Two from each DTG/ABC/3TC and ATV+RTV+TDF/FTC groups were randomized but not treated. A total of 495 participants received at least single dose of investigational products(IP) and were included in Intent-to-Treat Exposed(ITT-E) Population.

Period 1

Period 1 title	Randomized phase (Up to 48 weeks)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	DTG 50 mg/ABC 600 mg/3TC 300 mg QD-Randomized Phase

Arm description:

Participants received fixed dose combination (FDC) of DTG 50 milligram (mg)/ABC 600 mg/3TC 300 mg tablet once daily orally for 48 weeks in the Randomization Phase.

Arm type	Experimental
Investigational medicinal product name	Dolutegravir (DTG)/ Abacavir (ABC)/ Lamivudine (3TC) fixed dose combination (FDC)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Participants received FDC of DTG 50 mg/ABC 600 mg/3TC 300 mg tablet once daily orally

Arm title	ATV 300mg+RTV 100 mg+TDF 300 mg/FTC 200 mg QD-Randomized Phase
------------------	--

Arm description:

Participants received ATV 300 mg capsule, RTV 100 mg tablet, TDF 300 mg/ FTC 200 mg FDC tablet once daily orally for 48 weeks during Randomized Phase.

Arm type	Active comparator
Investigational medicinal product name	Atazanavir (ATV)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Participants received ATV 300 mg capsule once daily

Investigational medicinal product name	Tenofovir disoproxil fumarate/Emtricitabine (TDF/FTC) FDC
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Participants received FDC of TDF 300 mg/ FTC 200 mg tablet once daily

Investigational medicinal product name	Ritonavir (RTV)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Participants received RTV 100 mg tablet once daily

Number of subjects in period 1^[1]	DTG 50 mg/ABC 600 mg/3TC 300 mg QD-Randomized Phase	ATV 300mg+RTV 100 mg+TDF 300 mg/FTC 200 mg QD-Randomized Phase
Started	248	247
Completed	206	192
Not completed	42	55
Physician decision	1	-
Consent withdrawn by subject	5	7
Adverse event, non-fatal	10	18
Protocol Deviation	10	13
Lost to follow-up	11	13
Lack of efficacy	5	4

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: A total of 499 participants were randomized to receive DTG/ABC/3TC FDC or combination of ATV+RTV+TDF/FTC. Two from each DTG/ABC/3TC and ATV+RTV+TDF/FTC groups were randomized but not treated. A total of 495 participants received at least single dose of investigational products(IP) and were included in Intent-to-Treat Exposed(ITT-E) Population.

Period 2

Period 2 title	Continuation Phase(From Weeks 48 to 432)
Is this the baseline period?	No
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	DTG 50 mg/ABC 600 mg/3TC 300 mg QD-Continuation Phase
------------------	---

Arm description:

Participants received DTG 50 mg/ABC 600 mg/3TC 300 mg once daily orally in the Continuation Phase until it was either locally approved or commercial supplies were available.

Arm type	Experimental
Investigational medicinal product name	Dolutegravir (DTG)/ Abacavir (ABC)/ Lamivudine (3TC) fixed dose combination (FDC)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Participants received FDC of DTG 50 mg/ABC 600 mg/3TC 300 mg tablet once daily orally

Number of subjects in period 2^[2]	DTG 50 mg/ABC 600 mg/3TC 300 mg QD-Continuation Phase
Started	149
Completed	113
Not completed	36
Adverse event, serious fatal	1
Physician decision	1
Consent withdrawn by subject	7
Adverse event, non-fatal	3
Protocol Deviation	15
Lost to follow-up	8
Lack of efficacy	1

Notes:

[2] - The number of subjects starting the period is not consistent with the number completing the preceding period. It is expected the number of subjects starting the subsequent period will be the same as the number completing the preceding period.

Justification: 149 entered from Randomized to Continuation Phase

Primary: Percentage of participants with plasma HIV-1 RNA <50 copies/mL at Week 48

End point title	Percentage of participants with plasma HIV-1 RNA <50 copies/mL at Week 48
End point description: Percentage of participants with plasma human immunodeficiency virus type 1(HIV-1) ribonucleic acid (RNA) <50 copies per milliliter (c/mL) were assessed at Week 48 using the Snapshot algorithm. Analysis was performed using a stratified analysis with Cochran-Mantel-Haenszel (CMH) weights, adjusting for Baseline plasma HIV-1 RNA (=<vs. >100,000 c/mL) and CD4+ cell count (=<350 cells per millimeter cube (cells/mm ³) or >350 cells/mm ³). Intent-to-Treat Exposed (ITT-E) Population comprised of all randomized participants who received at least one dose of study medication. Percentage values are rounded off.	
End point type	Primary
End point timeframe: Week 48	

End point values	DTG 50 mg/ABC 600 mg/3TC 300 mg QD-Randomized Phase	ATV 300mg+RTV 100 mg+TDF 300 mg/FTC 200 mg QD-Randomized Phase		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	248 ^[1]	247 ^[2]		
Units: Percentage of participants	82	71

Statistical analyses

Statistical analysis title	Statistical Analysis 1
-----------------------------------	------------------------

Statistical analysis description:

Hypothesis was to show that the antiviral effect of the DTG/ABC/3TC FDC administered QD was non-inferior to QD ATV+RTV+TDF/FTC FDC. Non-inferiority was concluded if the lower bound of a two-sided 95% confidence interval for the difference in response rates between the two treatment arms was greater than -12%

Comparison groups	DTG 50 mg/ABC 600 mg/3TC 300 mg QD-Randomized Phase v ATV 300mg+RTV 100 mg+TDF 300 mg/FTC 200 mg QD-Randomized Phase
Number of subjects included in analysis	495
Analysis specification	Pre-specified
Analysis type	non-inferiority
P-value	= 0.005 ^[3]
Method	Cochran-Mantel-Haenszel
Parameter estimate	Adjusted difference in proportion
Point estimate	10.5
Confidence interval	
level	95 %
sides	2-sided
lower limit	3.1
upper limit	17.8

Notes:

[3] - If the primary and PP analyses both demonstrated non-inferiority, then as per pre-specified analysis, superiority of DTG/ABC/3TC FDC versus ATV+RTV+TDF/FTC FDC was tested in the ITT-E population at the 2-sided 5% level of significance.

Secondary: Percentage of participants with plasma HIV-1 RNA <50 and <400 c/mL over time-Randomized Phase

End point title	Percentage of participants with plasma HIV-1 RNA <50 and <400 c/mL over time-Randomized Phase
-----------------	---

End point description:

Percentage of participants with plasma HIV-1 RNA <50 and <400 c/mL were assessed at Baseline, Weeks 4, 12, 24, 36 and 48 using the Snapshot algorithm (Missing, Switch or Discontinuation = Failure). The Baseline value was defined as the latest pre-dose assessment (Day 1) value. Percentage values are rounded off.

Statistical analyses

No statistical analyses for this end point

Secondary: Change from Baseline in carbon dioxide, electrolytes, lipids, glucose, urea at indicated time points

End point title	Change from Baseline in carbon dioxide, electrolytes, lipids, glucose, urea at indicated time points
-----------------	--

End point description:

Clinical chemistry parameters were assessed at Baseline (Day 1), Weeks 4, 12, 24, 36 and 48. Change from Baseline in carbon dioxide, electrolytes (chloride, hyperkalemia, hyponatremia, hypokalemia, phosphate, potassium, sodium), lipids (cholesterol [CHLS], high density lipoprotein [HDL] CHLS direct, low density lipoprotein (LDL) CHLS calculation, LDL CHLS direct, triglycerides), glucose (hyperglycaemia, hypoglycaemia) and urea are summarized. Baseline value was defined as the latest pre-dose assessment (Day 1) value. Change from Baseline was calculated as post-dose visit value minus Baseline value. Laboratory parameters were assessed in Safety Population which comprised of all participants who received at least one dose of study treatment. Only those participants with data available at the specified time points were analyzed (represented by n=X in the category titles). 99999 indicates standard deviation could not be calculated for a single participant

An AE is defined as any unfavorable and unintended sign (including an abnormal laboratory finding), symptom, or disease (new or exacerbated) temporally associated with the use of a medicinal product. An SAE is any untoward medical occurrence that, at any dose results in death, is life-threatening, requires hospitalization or prolongation of existing hospitalization, results in disability/incapacity, or is a congenital anomaly/birth defect or other events that may jeopardize the participant or may require medical or surgical intervention to prevent one of the outcome listed above, liver injury and impaired liver function and grade 4 laboratory abnormalities. Number of participants with any AEs, and SAEs have been presented.

End point description:

An AE is defined as any untoward medical occurrence in a participant temporally associated with the use of a medicinal product (MP), whether or not considered related to the MP. An AE can therefore be any unfavorable and unintended sign (including an abnormal laboratory finding), symptom, or disease (new or exacerbated) temporally associated with the use of an MP. An SAE is defined as any untoward medical occurrence that, at any dose, results in death, is life threatening, requires hospitalization or prolongation of existing hospitalization, results in disability/incapacity, is a congenital anomaly/birth defect, is an important medical event that jeopardizes the participant or may require medical or surgical intervention to prevent one of the other outcomes listed in the above definition, or is associated with liver injury and impaired liver function.

-----------------	---

End point description:

Bone markers assessed at indicated timepoints. Bone specific alkaline phosphatase(BSAP), osteocalcin and procollagen 1 N-terminal propeptide(PTP), Type 1 Collagen C-Telopeptide, vitaminD ratio of Week48 results over Baseline is calculated. Bone biomarkers analyzed based on log transformed data. Estimates of adjusted mean and difference calculated from an Analysis of covariance(ANCOVA) model adjusting for age, baseline viral load Baseline CD4+ cell count, Baseline biomarker level, body mass index category, smoking status and baseline Vitamin D use. Adjusted mean of log-transformed change from Baseline transformed back to Week48/Baseline ratio for each treatment group. Adjusted difference of log-transformed change from Baseline between treatment groups is transformed back to ratio of Week48/Baseline ratio in DTG/ABC/3TC FDC to ATV+RTV+TDF/FTC FDC. Only those participants with data available at specified time points were analyzed(represented by n=X in category titles)

Secondary: Change from Baseline at Week 48 in SF-12 Total Score, MCS and PCS

End point title	Change from Baseline at Week 48 in SF-12 Total Score, MCS and PCS
-----------------	---

End point description:

SF-12 is a self-reported outcome measure assessing psychological wellness and the impact of health on an individual's everyday life. SF-12 questions make up 8 scales: Physical Functioning, Role Physical, Bodily Pain, General Health, Vitality, Social Functioning, Role Emotional, Mental Health. SF-12 total score ranges from 20 to 60 and higher score indicate a higher level of functioning. It was calculated by a clinician scoring 12-question survey filled by participants. Transformed physical component summary score (PCS) and transformed mental component summary score (MCS) are derived using sum of all 12 items and scored onto a 0-100 scale such that a higher score indicates a better health state and functioning. Baseline value was defined as latest pre-dose assessment (Day 1) value. Change from Baseline was calculated as post-dose visit value minus Baseline value. Only those participants with data available at the specified time points were analyzed (represented by n=X in the category titles)

Statistical analyses

No statistical analyses for this end point

Secondary: HIVTSQs Total Score at indicated timepoints

End point title	HIVTSQs Total Score at indicated timepoints
-----------------	---

End point description:

The HIV treatment satisfaction questionnaire (HIVTSQ) is a 10-item self-reported scale that measures overall satisfaction with treatment and by specific domains e.g. convenience, flexibility. The HIVTSQ items are summed up to produce a treatment satisfaction total score (0 to 60) and an individual satisfaction rating for each item (0 to 6) and two subscales: general satisfaction/clinical and lifestyle/ease subscales. The higher the score, the greater the improvement in treatment satisfaction as compared to the past few weeks. A smaller score represents a decline in treatment satisfaction compared to the past few weeks. Statistical analysis was performed based on Wilcoxon rank sum test. Only those participants with data available at the specified time points were analyzed (represented by n=X in the category titles)

Adverse events

Adverse events information

Timeframe for reporting adverse events:

All-cause mortality, Serious adverse events (SAEs) and non-SAEs were collected up to Week 48 for Randomized Phase; from Weeks 48 to 432 for Continuation Phase.

Adverse event reporting additional description:

All-Cause Mortality, SAEs and non-SAEs reported for Safety Population for Randomized Phase comprised all randomized participants who received at least one dose of study treatment. Safety-Continuation Population for Continuation Phase comprised of all participants in DTG/ABC/3TC group who received at least 1 dose of study treatment in Continuation Phase.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
12 August 2013	Amendment No. 01: This amendment includes the removal of the Child-Pugh Classification due to its unsuitability for use in participants with no known hepatic impairment. Other minor clarifications and corrections have been incorporated, including an update to Figure 2, Virologic Criteria for Subject Management at Week 24, to differentiate between the two scenarios for re-testing HIV-1 RNA levels.
11 August 2014	Amendment No. 2: Changes made to the UK country specific information on study duration (Appendix 5) to comply with requests from the UK MHRA. The medical monitor contact information has also been updated.
19 June 2018	Amendment No. 3: Changes were made to the protocol to manage and mitigate risks following identification of a potential safety issue related to neural tube defect in infants born to women with exposure to dolutegravir at the time of conception. i. The Risk Assessment table (Section 1.3.1.) was updated to include language regarding risk and mitigation of neural tube defects. ii. Inclusion criterion #2 (Section 4.2.) was updated to exclude the double barrier method of contraception, and refer to the Modified List of Highly Effective Methods for Avoiding Pregnancy in Females of Reproductive Potential. iii. The withdrawal criteria (Section 4.5.) were updated to include a reminder that females of reproductive potential who change their minds and desire to be pregnant, or who state they no longer are willing to comply with the approved pregnancy avoidance methods, should also be withdrawn from the study. iv. The Time and Events table (Section 6.1.) was updated to include a reminder for investigators to check at every visit that females of reproductive potential are avoiding pregnancy. v. Appendix 6 was added: Modified List of Highly Effective Methods for Avoiding Pregnancy in Females of Reproductive Potential. vi. Administrative updates were made.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
