EU Clinical Trials Register

Clinical trial results:
A Phase Ib Study of Eltrombopag and Azacitidine in Patients with High Risk Myelodysplastic Syndromes and Related Disorders

Summary

EudraCT number	2013-000341-39
Trial protocol	GB
Global end of trial date	07 September 2020

Results information

Result version number	v1 (current)
This version publication date	23 September 2021
First version publication date	23 September 2021
Summary attachment (see zip file)	ELASTIC End of Trial Clinical Trial Summary Report (ELASTIC End of Trial Clinical Trial Summary Report v1.0 07-Sep-2021.docx.pdf)

Trial information

Trial identification

Sponsor protocol code	RG_12-268

Additional study identifiers

ISRCTN number	ISRCTN05858391
ClinicalTrials.gov id (NCT number)	-
WHO universal trial number (UTN)	-

Notes:

Sponsors

Sponsor organisation name	University of Birmingham
Sponsor organisation address	Edgbaston, Birmingham, United Kingdom, B15 2TT
Public contact	Sonia Fox, University of Birmingham, +44 01214143289, elastic@trials.bham.ac.uk
Scientific contact	Sonia Fox, University of Birmingham, +44 01214143289, elastic@trials.bham.ac.uk

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	26 August 2021
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	07 September 2020
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To evaluate the safety and tolerability of eltrombopag (an oral thrombopoietin receptor agonist) in combination with azacitidine (the standard therapy) in patients with advanced myelodysplastic syndromes and related diseases by establishing the Maximum Tolerated Dose (MTD) and Optimum Biological Dose (OBD).

Protection of trial subjects:

The Independent Safety Monitoring Committee (ISMC) met after every cohort to evaluate safety data and consider if the next cohort should be opened.

Background therapy: -	
Evidence for comparator: -	
Actual start date of recruitment	01 July 2013
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United Kingdom: 31
Worldwide total number of subjects	31
EEA total number of subjects	0

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	0
From 65 to 84 years	25
85 years and over	6

Subject disposition

Recruitment

Recruitment details:

This trial recruited patients with IPSS INT-2/high-risk Myelodysplastic Syndromes (MDS), Chronic Myelomonocytic Leukaemia (CMML-2) and Acute Myeloid Leukaemia (AML) with less than 30% blasts.

Pre-assignment

Screening details:

The following tests were performed during screening to ensure the patient was eligible and fit enough to participate in the trial: physical exam (including height, weight, blood pressure and spleen measurement), blood tests, ECG and a pregnancy test (if appropriate).

Period 1

Period 1 title	Baseline (overall period)
Is this the baseline period?	Yes
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Cohort 1 (25mg eltrombopag)

Arm description:

Patients in this cohort received eltrombopag at their allocated dose (25mg) from day 1 (i.e. a week before cycle 1 of azacitidine) and continuously through the first two azacitidine cycles (each of 4 weeks duration). Patients were then given a third cycle of azacitidine alone to allow a period of 'wash-out' prior to bone marrow assessment. The dose of azacitidine was 75mg/m2 daily sub-cutaneous for 7 days (5 days on, 2 days off, 2 days on schedule).

Arm type	cohort
Investigational medicinal product name	eltrombopag
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Patients received eltrombopag at their allocated dose (see below) from day 1 (i.e. a week before cycle 1 of azacitidine) and continuously through the first two azacitidine cycles, each of 4 weeks duration (with pre-defined delays up to a total of 6 weeks duration per cycle).
Cohort 1: 25mg OD
Cohort 2: 50mg OD
Cohort 3: 100mg OD
Cohort 4: 200mg OD
Cohort 5: 300mg OD
Patients were then given a third cycle of azacitidine alone to allow a period of 'wash-out' prior to bone marrow assessment.

Investigational medicinal product name	azacitidine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder and solvent for cutaneous solution
Routes of administration	Subcutaneous use

Dosage and administration details:

Patients received a minimum of 3 cycles of azacitidine, starting at week 2 (day 8). Patients could receive up to 6 cycles of azacitidine whilst on trial. Treatment with azacitidine was continued as long as the patient continued to benefit or until disease progression as per its licences, at the discretion of the treating clinician. The dose of azacitidine was 75mg/m2 daily sub-cutaneous for 7 days (5 days on, 2 days off, 2 days on schedule).

Arm title	Cohort 2 (50mg eltrombopag)

Arm description:

Patients in this cohort received eltrombopag at their allocated dose (50mg) from day 1 (i.e. a week before cycle 1 of azacitidine) and continuously through the first two azacitidine cycles (each of 4 weeks duration). Patients were then given a third cycle of azacitidine alone to allow a period of 'wash-out' prior to bone marrow assessment. The dose of azacitidine was 75mg/m2 daily sub-cutaneous for 7 days (5 days on, 2 days off, 2 days on schedule)

Arm type	cohort
Investigational medicinal product name	eltrombopag
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Patients received eltrombopag at their allocated dose (see below) from day 1 (i.e. a week before cycle 1 of azacitidine) and continuously through the first two azacitidine cycles, each of 4 weeks duration (with pre-defined delays up to a total of 6 weeks duration per cycle).
Cohort 1: 25mg OD
Cohort 2: 50mg OD
Cohort 3: 100mg OD
Cohort 4: 200mg OD
Cohort 5: 300mg OD
Patients were then given a third cycle of azacitidine alone to allow a period of 'wash-out' prior to bone marrow assessment.

Investigational medicinal product name	azacitidine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder and solvent for cutaneous solution
Routes of administration	Subcutaneous use

Dosage and administration details:

Patients received a minimum of 3 cycles of azacitidine, starting at week 2 (day 8). Patients could receive up to 6 cycles of azacitidine whilst on trial. Treatment with azacitidine was continued as long as the patient continued to benefit or until disease progression as per its licences, at the discretion of the treating clinician. The dose of azacitidine was 75mg/m2 daily sub-cutaneous for 7 days (5 days on, 2 days off, 2 days on schedule).

Arm title	Cohort 3 (100mg eltrombopag)

Arm description:

Patients in this cohort received eltrombopag at their allocated dose (100mg) from day 1 (i.e. a week before cycle 1 of azacitidine) and continuously through the first two azacitidine cycles (each of 4 weeks duration). Patients were then given a third cycle of azacitidine alone to allow a period of 'wash-out' prior to bone marrow assessment. The dose of azacitidine was 75mg/m2 daily sub-cutaneous for 7 days (5 days on, 2 days off, 2 days on schedule)

Arm type	cohort
Investigational medicinal product name	azacitidine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder and solvent for cutaneous solution
Routes of administration	Subcutaneous use

Dosage and administration details:

Patients received a minimum of 3 cycles of azacitidine, starting at week 2 (day 8). Patients could receive up to 6 cycles of azacitidine whilst on trial. Treatment with azacitidine was continued as long as the patient continued to benefit or until disease progression as per its licences, at the discretion of the treating clinician. The dose of azacitidine was 75mg/m2 daily sub-cutaneous for 7 days (5 days on, 2 days off, 2 days on schedule).

Investigational medicinal product name	eltrombopag
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Patients received eltrombopag at their allocated dose (see below) from day 1 (i.e. a week before cycle 1 of azacitidine) and continuously through the first two azacitidine cycles, each of 4 weeks duration (with pre-defined delays up to a total of 6 weeks duration per cycle).
Cohort 1: 25mg OD
Cohort 2: 50mg OD
Cohort 3: 100mg OD
Cohort 4: 200mg OD
Cohort 5: 300mg OD
Patients were then given a third cycle of azacitidine alone to allow a period of 'wash-out' prior to bone marrow assessment.

Arm title	Cohort 4 (200mg eltrombopag)

Arm description:

Patients in this cohort received eltrombopag at their allocated dose (200mg) from day 1 (i.e. a week before cycle 1 of azacitidine) and continuously through the first two azacitidine cycles (each of 4 weeks duration). Patients were then given a third cycle of azacitidine alone to allow a period of 'wash-out' prior to bone marrow assessment. The dose of azacitidine was 75mg/m2 daily sub-cutaneous for 7 days (5 days on, 2 days off, 2 days on schedule)

Arm type	cohort
Investigational medicinal product name	eltrombopag
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Patients received eltrombopag at their allocated dose (see below) from day 1 (i.e. a week before cycle 1 of azacitidine) and continuously through the first two azacitidine cycles, each of 4 weeks duration (with pre-defined delays up to a total of 6 weeks duration per cycle).
Cohort 1: 25mg OD
Cohort 2: 50mg OD
Cohort 3: 100mg OD
Cohort 4: 200mg OD
Cohort 5: 300mg OD
Patients were then given a third cycle of azacitidine alone to allow a period of 'wash-out' prior to bone marrow assessment.

Investigational medicinal product name	azacitidine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder and solvent for cutaneous solution
Routes of administration	Subcutaneous use

Dosage and administration details:

Patients received a minimum of 3 cycles of azacitidine, starting at week 2 (day 8). Patients could receive up to 6 cycles of azacitidine whilst on trial. End points

End points reporting groups

Reporting group title	Cohort 1 (25mg eltrombopag)

Reporting group description:

Patients in this cohort received eltrombopag at their allocated dose (25mg) from day 1 (i.e. a week before cycle 1 of azacitidine) and continuously through the first two azacitidine cycles (each of 4 weeks duration). Patients were then given a third cycle of azacitidine alone to allow a period of 'wash-out' prior to bone marrow assessment. The dose of azacitidine was 75mg/m2 daily sub-cutaneous for 7 days (5 days on, 2 days off, 2 days on schedule).

Reporting group title	Cohort 2 (50mg eltrombopag)

Reporting group description:

Patients in this cohort received eltrombopag at their allocated dose (50mg) from day 1 (i.e. a week before cycle 1 of azacitidine) and continuously through the first two azacitidine cycles (each of 4 weeks duration). Patients were then given a third cycle of azacitidine alone to allow a period of 'wash-out' prior to bone marrow assessment. The dose of azacitidine was 75mg/m2 daily sub-cutaneous for 7 days (5 days on, 2 days off, 2 days on schedule)

Reporting group title	Cohort 3 (100mg eltrombopag)

Reporting group description:

Patients in this cohort received eltrombopag at their allocated dose (100mg) from day 1 (i.e. a week before cycle 1 of azacitidine) and continuously through the first two azacitidine cycles (each of 4 weeks duration). Patients were then given a third cycle of azacitidine alone to allow a period of 'wash-out' prior to bone marrow assessment. The dose of azacitidine was 75mg/m2 daily sub-cutaneous for 7 days (5 days on, 2 days off, 2 days on schedule)

Reporting group title	Cohort 4 (200mg eltrombopag)

Reporting group description:

Patients in this cohort received eltrombopag at their allocated dose (200mg) from day 1 (i.e. a week before cycle 1 of azacitidine) and continuously through the first two azacitidine cycles (each of 4 weeks duration). Patients were then given a third cycle of azacitidine alone to allow a period of 'wash-out' prior to bone marrow assessment. The dose of azacitidine was 75mg/m2 daily sub-cutaneous for 7 days (5 days on, 2 days off, 2 days on schedule)

Reporting group title	Cohort 5 (300mg eltrombopag)

Reporting group description:

Patients in this cohort received eltrombopag at their allocated dose (300mg) from day 1 (i.e. a week before cycle 1 of azacitidine) and continuously through the first two azacitidine cycles (each of 4 weeks duration). Patients were then given a third cycle of azacitidine alone to allow a period of 'wash-out' prior to bone marrow assessment. The dose of azacitidine was 75mg/m2 daily sub-cutaneous for 7 days (5 days on, 2 days off, 2 days on schedule)

Primary: Number of Patients Experiencing a Dose Limiting Toxicity

End point title	Number of Patients Experiencing a Dose Limiting Toxicity[1]

End point description:

A DLT was defined by the following safety and tolerability parameters assessed using the NCI CTC Criteria v4:
Progression of disease was not considered a DLT. However, a number of studies in this patient population have described disease progression in patients receiving TpoR agonists. In some cases there were transient blast percentage rises whilst in others there was true disease progression. The precise role of TpoR agonists in this is unclear. An AE deemed to be unrelated to Eltrombopag was not considered a DLT.

End point type	Primary

End point timeframe:

Dose limiting toxicity (DLT) was defined by safety and tolerability parameters within 5 weeks (1 cycle of treatment).

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: The protocol states all analyses will be descriptive. The primary outcome is the number of patients experiencing a dose limiting toxicity according to the protocol definition. This does not require formal statistical analysis.

Secondary: Optimal Biological Dose

End point title	Optimal Biological Dose

End point description:

The Optimal Biological dose (OBD) of eltrombopag in combination with azacitidine was defined as the dose of eltrombopag, provided this is the MTD or less, which maintains a platelet count within the range 100-250 x 10-9/L immediately prior to azacitidine treatment. The number of patients that met the OBD definition for at least one time point is reported.

End point type	Secondary

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Adverse Events were reported from the date of commencement of protocol defined treatment until 30 days after the administration of the last trial treatment.

Assessment type	Non-systematic

Dictionary used

Dictionary name	CTCAE
Dictionary version	4

Reporting groups

Reporting group title	All patients

Reporting group description:

Whilst the defined `safety population' is defined as patients who received at least one dose of both treatments, the data presented here includes all patients registered to the trial for completeness.

Serious adverse events	All patients		
Total subjects affected by serious adverse events			
subjects affected / exposed	25 / 30 (83.33%)		
number of deaths (all causes)	15		
number of deaths resulting from adverse events	9		
Neoplasms benign, malignant and unspecified (incl cysts and polyps)			
Neoplasms benign, malignant and unspecified (incl cysts and polyps) - other			
subjects affected / exposed	1 / 30 (3.33%)		
occurrences causally related to treatment / all	1 / 1		
deaths causally related to treatment / all	0 / 0		
Vascular disorders			
Hypotension			
subjects affected / exposed	1 / 30 (3.33%)		
occurrences causally related to treatment / all	0 / 1		
deaths causally related to treatment / all	0 / 0		
Haematoma			
subjects affected / exposed	1 / 30 (3.33%)		
occurrences causally related to treatment / all	1 / 1		
deaths causally related to treatment / all	0 / 0		
Thromboembolic event			

subjects affected / exposed	1 / 30 (3.33%)		
occurrences causally related to treatment / all	1 / 1		
deaths causally related to treatment / all	0 / 0		
General disorders and administration site conditions			
Pyrexia			
subjects affected / exposed	5 / 30 (16.67%)		
occurrences causally related to treatment / all	5 / 7		
deaths causally related to treatment / all	0 / 0		
Non-cardiac chest pain			
subjects affected / exposed	2 / 30 (6.67%)		
occurrences causally related to treatment / all	1 / 2		
deaths causally related to treatment / all	0 / 0		
Immune system disorders			
Immune system disorders - other			
subjects affected / exposed	1 / 30 (3.33%)		
occurrences causally related to treatment / all	1 / 1		
deaths causally related to treatment / all	0 / 0		
Respiratory, thoracic and mediastinal disorders			
Dyspnoea			
subjects affected / exposed	1 / 30 (3.33%)		
occurrences causally related to treatment / all	2 / 2		
deaths causally related to treatment / all	0 / 0		
Pleural effusion			
subjects affected / exposed	1 / 30 (3.33%)		
occurrences causally related to treatment / all	1 / 1		
deaths causally related to treatment / all	0 / 0		
Investigations			
Neutrophil count decreased			
subjects affected / exposed	1 / 30 (3.33%)		
occurrences causally related to treatment / all	1 / 1		
deaths causally related to treatment / all	0 / 0		
Blood bilirubin increased			

subjects affected / exposed	1 / 30 (3.33%)		
occurrences causally related to treatment / all	1 / 1		
deaths causally related to treatment / all	1 / 1		
Cardiac disorders			
Left ventricular systolic dysfunction			
subjects affected / exposed	1 / 30 (3.33%)		
occurrences causally related to treatment / all	1 / 1		
deaths causally related to treatment / all	0 / 0		
Heart failure			
subjects affected / exposed	1 / 30 (3.33%)		
occurrences causally related to treatment / all	0 / 1		
deaths causally related to treatment / all	0 / 1		
Myocardial infarction			
subjects affected / exposed	1 / 30 (3.33%)		
occurrences causally related to treatment / all	1 / 1		
deaths causally related to treatment / all	1 / 1		
Nervous system disorders			
Dizziness			
subjects affected / exposed	1 / 30 (3.33%)		
occurrences causally related to treatment / all	0 / 1		
deaths causally related to treatment / all	0 / 0		
Movements involuntary			
subjects affected / exposed	1 / 30 (3.33%)		
occurrences causally related to treatment / all	0 / 1		
deaths causally related to treatment / all	0 / 1		
Intracranial haemorrhage			
subjects affected / exposed	1 / 30 (3.33%)		
occurrences causally related to treatment / all	1 / 1		
deaths causally related to treatment / all	1 / 1		
Blood and lymphatic system disorders			
Febrile neutropenia			
subjects affected / exposed	7 / 30 (23.33%)		
occurrences causally related to treatment / all	8 / 8		
deaths causally related to treatment / all	3 / 3		

Anaemia			
subjects affected / exposed	1 / 30 (3.33%)		
occurrences causally related to treatment / all	0 / 1		
deaths causally related to treatment / all	0 / 0		
Ear and labyrinth disorders			
Middle ear inflammation			
subjects affected / exposed	1 / 30 (3.33%)		
occurrences causally related to treatment / all	0 / 1		
deaths causally related to treatment / all	0 / 0		
Gastrointestinal disorders			
Gastric haemorrhage			
subjects affected / exposed	1 / 30 (3.33%)		
occurrences causally related to treatment / all	0 / 2		
deaths causally related to treatment / all	0 / 0		
Diarrhoea			
subjects affected / exposed	1 / 30 (3.33%)		
occurrences causally related to treatment / all	1 / 1		
deaths causally related to treatment / all	0 / 0		
Skin and subcutaneous tissue disorders			
Rash maculo-papular			
subjects affected / exposed	2 / 30 (6.67%)		
occurrences causally related to treatment / all	2 / 2		
deaths causally related to treatment / all	0 / 0		
Skin and subcutaneous tissue disorders - other			
subjects affected / exposed	1 / 30 (3.33%)		
occurrences causally related to treatment / all	0 / 1		
deaths causally related to treatment / all	0 / 0		
Renal and urinary disorders			
Renal and urinary disorders - other			
subjects affected / exposed	1 / 30 (3.33%)		
occurrences causally related to treatment / all	0 / 1		
deaths causally related to treatment / all	0 / 0		
Hematuria			

subjects affected / exposed	1 / 30 (3.33%)			
occurrences causally related to treatment / all	1 / 1			
deaths causally related to treatment / all	0 / 0			

Infections and infestations

Sepsis

subjects affected / exposed	2 / 30 (6.67%)			
occurrences causally related to treatment / all	0 / 2			
deaths causally related to treatment / all	0 / 1			

Upper respiratory tract infection

subjects affected / exposed	2 / 30 (6.67%)			
occurrences causally related to treatment / all	2 / 2			
deaths causally related to treatment / all	0 / 0			

Skin infection

subjects affected / exposed	1 / 30 (3.33%)			
occurrences causally related to treatment / all	1 / 1			
deaths causally related to treatment / all	0 / 0			

Lung infection

subjects affected / exposed	1 / 30 (3.33%)			
occurrences causally related to treatment / all	0 / 1			
deaths causally related to treatment / all	0 / 1			

Infections and infestations - other

subjects affected / exposed	1 / 30 (3.33%)			
occurrences causally related to treatment / all	0 / 1			
deaths causally related to treatment / all	0 / 0			

Tooth infection

subjects affected / exposed	1 / 30 (3.33%)			
occurrences causally related to treatment / all	1 / 1			
deaths causally related to treatment / all	1 / 1			

Frequency threshold for reporting non-serious adverse events: 5 %

Non-serious adverse events	All patients		
Total subjects affected by non-serious adverse events			
subjects affected / exposed	30 / 30 (100.00%)		
Vascular disorders			
Hypotension			
subjects affected / exposed	3 / 30 (10.00%)		
occurrences (all)	4		
General disorders and administration site conditions			
Fatigue			
subjects affected / exposed	14 / 30 (46.67%)		
occurrences (all)	16		
Injection site reaction			
subjects affected / exposed	11 / 30 (36.67%)		
occurrences (all)	12		
Pyrexia			
subjects affected / exposed	9 / 30 (30.00%)		
occurrences (all)	10		
Edema limbs			
subjects affected / exposed	5 / 30 (16.67%)		
occurrences (all)	5		
General disorders and administration site conditions - other			
subjects affected / exposed	4 / 30 (13.33%)		
occurrences (all)	5		
Flu like symptoms			
subjects affected / exposed	2 / 30 (6.67%)		
occurrences (all)	3		
Non-cardiac chest pain			
subjects affected / exposed	2 / 30 (6.67%)		
occurrences (all)	2		
Pain			
subjects affected / exposed	2 / 30 (6.67%)		
occurrences (all)	2		
Immune system disorders			
Allergic reaction			
subjects affected / exposed	2 / 30 (6.67%)		
occurrences (all)	2		

Respiratory, thoracic and mediastinal disorders			
Dyspnea			
subjects affected / exposed	7 / 30 (23.33%)		
occurrences (all)	11		
Epistaxis			
subjects affected / exposed	9 / 30 (30.00%)		
occurrences (all)	12		
Respiratory, thoracic and mediastinal disorders - other			
subjects affected / exposed	4 / 30 (13.33%)		
occurrences (all)	4		
Cough			
subjects affected / exposed	2 / 30 (6.67%)		
occurrences (all)	2		
Pleural effusion			
subjects affected / exposed	2 / 30 (6.67%)		
occurrences (all)	2		
Psychiatric disorders			
Confusion			
subjects affected / exposed	4 / 30 (13.33%)		
occurrences (all)	4		
Insomnia			
subjects affected / exposed	3 / 30 (10.00%)		
occurrences (all)	3		
Investigations			
Alanine aminotransferase increased			
subjects affected / exposed	2 / 30 (6.67%)		
occurrences (all)	4		
Blood bilirubin increased			
subjects affected / exposed	2 / 30 (6.67%)		
occurrences (all)	6		
Injury, poisoning and procedural complications			
Fall			
subjects affected / exposed	5 / 30 (16.67%)		
occurrences (all)	5		
Bruising			

subjects affected / exposed	3 / 30 (10.00%)

occurrences (all)	2		

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
09 June 2015	Update to eligibility criteria Update to definition of Dose Limiting Toxicity to specify the event must be at least possibly related to eltrombopag. Update to schedule of events - clarifications Update to trial personnel Update to registration phone number Clarification of allowed dose modifications Update to Adverse Event reporting - abnormal laboratory findings do not need to be reported unless they meet specific criteria. Update to CRF list Update to response assessment reporting to include Hematological Improvement according to IWG critera Update to archiving period Addition of Appendices 7 (Prohibited concomitant medication and 8 (IWG Response Criteria) Minor corrections and clarifications
25 April 2016	Update to trial personnel Update to registration phone number Update to Trial Treatment details (Eltrombopag only) - change from clinical trial stock to commercial supply. Update to definition of Dose Limiting Toxicity to exclude disease progression Update to Adverse Event reporting to include reporting of overdoses Clarification of Sample Collection Update to Data Collection to add Transfusion Form Minor corrections and clarifications

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

 None reported
