Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	10 October 2016
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	26 May 2016
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

This multi-center, open-label single arm Phase IIb study evaluated the safety and efficacy of subcutaneous (SC) tocilizumab administered as monotherapy and/or in combination with methotrexate or other non-biologic disease modifying antirheumatic drugs (DMARDs) in participants with rheumatoid arthritis (RA) with an inadequate response to non-biologic DMARDs.

Protection of trial subjects:

This study was conducted in full conformance with the International Conference on Harmonisation (ICH) E6 guideline for Good Clinical Practice (GCP) and the principles of the Declaration of Helsinki, or the laws and regulations of the country in which the research was conducted, whichever afforded the greater protection to the individual.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	30 January 2014
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Netherlands: 150
Worldwide total number of subjects	150
EEA total number of subjects	150

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	122
From 65 to 84 years	27

85 years and over	1
-------------------	---

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

A total of 174 participants were screened, out of which 150 participants met eligibility criteria and were enrolled into the study.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	Tocilizumab Alone or in Combination with Methotrexate or DMARD
-----------	--

Arm description:

Participants received a weekly SC injection of tocilizumab 162 milligrams (mg) as monotherapy or in combination with methotrexate or other non-biologic DMARDs for 24 weeks.

Arm type	Experimental
Investigational medicinal product name	Tocilizumab
Investigational medicinal product code	
Other name	RoActemra, Actemra
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Tocilizumab 162 mg was administered once a week by SC injection and as a single fixed dose, irrespective of body weight, for the treatment duration of 24 weeks.

Number of subjects in period 1	Tocilizumab Alone or in Combination with Methotrexate or DMARD
Started	150
Completed	133
Not completed	17
Physician decision	2
Adverse event, non-fatal	7
Unspecified	5
Lost to follow-up	1
Protocol deviation	1
participant/legal guardian decision to withdraw	1

Baseline characteristics

Reporting groups

Reporting group title	Tocilizumab Alone or in Combination with Methotrexate or DMARD
-----------------------	--

Reporting group description:

Participants received a weekly SC injection of tocilizumab 162 milligrams (mg) as monotherapy or in combination with methotrexate or other non-biologic DMARDs for 24 weeks.

Reporting group values	Tocilizumab Alone or in Combination with Methotrexate or DMARD	Total	
Number of subjects	150	150	
Age Categorical Units: Subjects			
Age Continuous Units: years arithmetic mean standard deviation	55.85 ± 11.2	-	
Gender Categorical Units: Subjects			
Female	110	110	
Male	40	40	

End points

End points reporting groups

Reporting group title	Tocilizumab Alone or in Combination with Methotrexate or DMARD
Reporting group description: Participants received a weekly SC injection of tocilizumab 162 milligrams (mg) as monotherapy or in combination with methotrexate or other non-biologic DMARDs for 24 weeks.	

Primary: Percentage of Participants With Adverse Events

End point title	Percentage of Participants With Adverse Events ^[1]
End point description: An adverse event was any untoward medical occurrence in a participant who received study drug without regard to possibility of causal relationship. Adverse events included serious as well as non-serious adverse events. Full Analysis Set (FAS) population included all participants who received at least one dose of SC tocilizumab.	
End point type	Primary
End point timeframe: Baseline up to Week 32	
Notes: [1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point. Justification: No statistical analyses were planned for this endpoint but descriptive statistics only	

End point values	Tocilizumab Alone or in Combination with Methotrexate or DMARD			
Subject group type	Reporting group			
Number of subjects analysed	150			
Units: percentage of participants				
number (not applicable)	91.3			

Statistical analyses

Secondary: Change From Baseline in Disease Activity Score 28-Erythrocyte Sedimentation Rate (DAS28-ESR) Score at Weeks 2, 4, 8, 12, 16, 20, 24, and Early Withdrawal

End point title	Change From Baseline in Disease Activity Score 28-Erythrocyte Sedimentation Rate (DAS28-ESR) Score at Weeks 2, 4, 8, 12, 16, 20, 24, and Early Withdrawal
-----------------	---

End point description:
DAS28 was calculated from swollen joint count (SJC) and tender joint count (TJC) using 28 joints count, erythrocyte sedimentation rate (ESR; millimeters per hour [mm/hour]), and patient's global assessment of disease activity (measured on a 0 to 100 mm Visual Analog Scale [VAS] where 0 mm=no disease activity and 100 mm=worst disease activity). DAS28 scores were calculated as $[0.56 \times \text{square root of TJC}] + [0.28 \times \text{square root of SJC}] + [0.70 \times \text{natural log (ESR)}] + [0.014 \times \text{VAS}]$. Total score range: 0-

10, higher score=higher disease activity. DAS28-ESR less than or equal to (\leq) 3.2 implied low disease activity and greater than ($>$) 3.2 to 5.1 implied moderate to high disease activity, and DAS28-ESR less than ($<$) 2.6 implied clinical remission. FAS population. Here, "n" = participants who were evaluable at the specified timepoint.

End point type	Secondary
End point timeframe:	
Baseline, Weeks 2, 4, 8, 12, 16, 20, 24, and at Early Withdrawal (up to Week 24)	

End point values	Tocilizumab Alone or in Combination with Methotrexate or DMARD

Statistical analyses

Secondary: Percentage of Participants With European League Against Rheumatism (EULAR) Response (Good, Moderate or No Response) Based on DAS28-ESR

End point title	Percentage of Participants With European League Against Rheumatism (EULAR) Response (Good, Moderate or No Response) Based on DAS28-ESR
-----------------	--

End point description:

DAS28-ESR was calculated from SJC and TJC using 28 joints count, ESR (mm/hour), and patient's global assessment of disease activity (VAS: 0 mm=no disease activity to 100 mm=maximum disease activity). $DAS28-ESR = [0.56 \times \text{square root of TJC}] + [0.28 \times \text{square root of SJC}] + [0.70 \times \text{natural log (ESR)}] + [0.014 \times \text{VAS}]$. DAS28-ESR based EULAR response criteria were used to measure individual response as none, good, and moderate, depending on the extent of change from baseline and level of disease activity reached. Good responders had a change from baseline >1.2 with a DAS28 score ≤ 3.2 ; moderate responders had a change from baseline >1.2 with a DAS28 score >3.2 or a change from baseline >0.6 to ≤ 1.2 with a DAS28 score ≤ 5.1 . Participants with change from baseline >0.6 to ≤ 1.2 with a DAS28 score >5.1 , or any score with change from baseline ≤ 0.6 , were assessed as non-responders. FAS population. "n"=participants who were evaluable at specified timepoint.

Secondary: Change From Baseline in Total SJC at Weeks 2, 4, 8, 12, 16, 20, 24, and Early Withdrawal

End point title	Change From Baseline in Total SJC at Weeks 2, 4, 8, 12, 16, 20, 24, and Early Withdrawal
End point description: Number of swollen joints was determined by examination of 28 joints for SJC28 and 66 joints for SJC66 and identifying when swelling was present. The number of swollen joints was recorded on the joint assessment form at each visit, no swelling = 0, swelling =1; total was calculated by adding all the joints for a maximum score of 28 for a SJC28 and 66 for a SJC66. A reduction in number of swollen joints compared to baseline indicates improvement. FAS population. Here, "n" = participants who were evaluable at specified timepoint.	
End point type	Secondary
End point timeframe: Baseline, Weeks 2, 4, 8, 12, 16, 20, 24, and at Early Withdrawal (up to Week 24)

Secondary: Health Assessment Questionnaire-Disability Index (HAQ-DI) Score

End point title	Health Assessment Questionnaire-Disability Index (HAQ-DI) Score
-----------------	---

End point description:

The HAQ-DI questionnaire measures functional status (disability) and health-related quality of life. It measures the participant's ability to perform everyday tasks. The index consists of 20 questions regarding the function of the upper and lower extremities. These questions are summarized in 8 categories: dressing and grooming, arising, eating, walking, hygiene, reach, grip, and common activities over past week. Each question is evaluated according to the degree of severity on a 4-point scale. Total score for HAQ-DI was the average of all questions and ranges from 0 = without any difficulty to 3 = unable to do. FAS population. Here, "n" = participants who were evaluable at specified timepoint.

Secondary: Functional Assessment of Chronic Illness Therapy-Fatigue (FACIT-F) Score

End point title	Functional Assessment of Chronic Illness Therapy-Fatigue (FACIT-F) Score
End point description:	
The FACIT-F score was calculated according to a 13-item questionnaire that assesses self-reported fatigue and its impact upon daily activities and function. FACIT-F is a 13-item questionnaire. Participants scored each item on a 5-point scale: 0 (Not at all) to 4 (Very much). The larger the participant's response to the questions (with the exception of 2 negatively stated), the greater the participants fatigue. For all questions, except for the 2 negatively stated ones, the code was reversed and a new score was calculated as (4 minus the participant's response). The sum of all responses resulted in the FACIT-Fatigue score for a total possible score of 0 (worse score) to 52 (better score). FAS population. Here, "n" = participants who were evaluable at specified timepoint.
