

Clinical trial results:

A Phase 2, Randomized, Double-Blind, Placebo-Controlled Study to Evaluate LUM001, an Apical Sodium-Dependent Bile Acid Transporter Inhibitor (ASBTi), in Combination with Ursodeoxycholic Acid (UDCA) in Patients with Primary Biliary Cirrhosis

Summary

EudraCT number	2013-000482-36
Trial protocol	GB
Global end of trial date	09 April 2015

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	09 April 2015
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	09 April 2015
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To evaluate the effect of LUM001 in combination with ursodeoxycholic acid (UDCA) versus UDCA alone on the reduction of pruritus associated with primary biliary cirrhosis (PBC).

Protection of trial subjects:

The study was conducted in accordance with the Declaration of Helsinki and its revisions as well as with the valid national law(s) of the participating countries, with the International Conference on Harmonisation (ICH) Harmonized Tripartite Guideline for Good Clinical Practice (GCP).

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	19 August 2013
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Canada: 1
Country: Number of subjects enrolled	United Kingdom: 18
Country: Number of subjects enrolled	United States: 47
Worldwide total number of subjects	66
EEA total number of subjects	18

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	52
From 65 to 84 years	14

85 years and over	0
-------------------	---

Subject disposition

Recruitment

Recruitment details:

The study was conducted in 24 centers in the United Kingdom, Canada, and the United States between 19 August 2013 and 09 April 2015.

Pre-assignment

Screening details:

A total of 87 subjects were screened out of which 66 subjects were randomized into the study and the remaining 21 were screen failures.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor

Arms

Are arms mutually exclusive?	Yes
Arm title	LUM001 10 mg + UDCA (Cohort A)

Arm description:

In Cohort A, subjects received LUM001 tablet in combination with ursodeoxycholic acid (UDCA) orally once daily at a dosage of 2.5 up to a maximum of 10 milligram (mg) during the dose-escalation period over a 3 week period. Thereafter, subjects received LUM001 10 mg tablet along with one placebo matched to LUM001 orally once daily for another 10 weeks, in combination with UDCA. Subjects continued UDCA alone for an additional period of 4 weeks.

Arm type	Experimental
Investigational medicinal product name	LUM001
Investigational medicinal product code	SHP625
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Subjects received LUM001 tablet in combination with UDCA orally once daily at a dosage of 2.5 up to a maximum of 10 mg during the dose-escalation period over a 3 week period. Thereafter, subjects received LUM001 10 mg tablet along with one placebo matched to LUM001 orally once daily for another 10 weeks, in combination with UDCA. Subjects continued UDCA alone for an additional period of 4 weeks.

Arm title	LUM001 20 mg + UDCA (Cohort B)
------------------	--------------------------------

Arm description:

In Cohort B, subjects received LUM001 tablets in combination with UDCA orally once daily at a dosage of 2.5 mg up to a maximum of 20 mg during the dose-escalation period over a 4 week period. Thereafter, subjects received LUM001 20 mg (2x10 mg) tablet orally once daily for another 9 weeks, in combination with UDCA. Subjects continued UDCA alone for an additional period of 4 weeks.

Arm type	Experimental
Investigational medicinal product name	LUM001
Investigational medicinal product code	SHP625
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Subjects received LUM001 tablets in combination with UDCA orally once daily at a dosage of 2.5 mg up to a maximum of 20 mg during the dose-escalation period over a 4 week period. Thereafter, subjects received LUM001 20 mg (2x10 mg) tablet orally once daily for another 9 weeks, in combination with

Arm title	Placebo + UDCA (Cohort A)
------------------	---------------------------

Arm description:

In Cohort A, subjects received placebo (matched to LUM001) once daily for a period of 13 weeks, in combination with UDCA. Subjects continued UDCA alone for an additional period of 4 weeks.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Subjects received placebo (matched to LUM001) once daily for a period of 13 weeks, in combination with UDCA. Subjects continued UDCA alone for an additional period of 4 weeks.

Arm title	Placebo + UDCA (Cohort B)
------------------	---------------------------

Arm description:

In Cohort B, subjects received placebo (matched to LUM001) for a period of 13 weeks, in combination with UDCA. Subjects continued UDCA alone for an additional period of 4 weeks.

Primary: Change From Baseline in Pruritus Using Adult Itch Reported Outcome (ItchRO) Weekly Sum Score at Week 13/ Early Termination (ET)

End point title	Change From Baseline in Pruritus Using Adult Itch Reported Outcome (ItchRO) Weekly Sum Score at Week 13/ Early Termination (ET)
-----------------	---

End point description:

Pruritus was assessed using ItchRO measure, administered as an electronic diary (eDiary) which was completed by the subjects twice daily (morning and evening). (ItchRO) scores ranged from 0 to 10, with 0 representing no itch and 10 representing very severe itching. The highest score between the morning and evening ItchRO reports represented the daily score: a measure of the worst itching over the previous 24-hour period. The weekly sum score was calculated as the sum of the daily scores for the 7

days prior to the time point being reported: 7 days prior to randomization or 7 days prior to Week 13/ET visit. The mITT population included all subjects who were randomized, received at least 1 dose of treatment, and had at least 1 post-baseline ItchRO assessment.

Secondary: Change From Baseline in Bile Acid Synthesis as Measured by Serum 7 Alpha-Hydroxy-4-Cholesten-3-One C4 Level [7 Alpha C4]) at Weeks 4, 8, 13, and Last Post -baseline Visit (Week 13/ET)

End point title	Change From Baseline in Bile Acid Synthesis as Measured by Serum 7 Alpha-Hydroxy-4-Cholesten-3-One C4 Level [7 Alpha C4]) at Weeks 4, 8, 13, and Last Post -baseline Visit (Week 13/ET)
-----------------	---

End point description:

C4 7 alpha-hydroxy-4-cholesten-3-one is an intermediate in the biochemical synthesis of bile acids from cholesterol and its concentrations reflect the activity of the bile acid synthetic pathway. Elevated levels of C4 indicate bile acid malabsorption. Laboratory C4 levels were evaluated using blood samples collected. mITT Population. Here, "n" signifies the number of subjects evaluable for the respective time points.

Other pre-specified: Number of Subjects With Treatment-emergent Adverse Events (TEAEs) and Treatment-emergent Serious Adverse Events (TESAEs)

End point title	Number of Subjects With Treatment-emergent Adverse Events (TEAEs) and Treatment-emergent Serious Adverse Events (TESAEs)
-----------------	--

End point description:

An adverse event (AE) was defined as any unfavorable and unintended sign (including an abnormal laboratory finding), symptom, or disease temporally associated with the use of an investigational product, whether or not considered related to the product. A serious adverse event (SAE) was defined as an AE resulting in any of the following outcomes or deemed significant for any other reason: death; initial or prolonged in-patient hospitalization; life-threatening; persistent or significant disability/incapacity; congenital anomaly or birth defect; an important medical event that did not meet any of the above criteria but jeopardized the subject or required medical or surgical intervention to prevent one of the outcomes listed above. A TEAE was defined as any AE that occurred during the study, from the start of investigational product dosing through the end of the study [13 weeks of treatment period (or ET) + 14 days], or that worsened since the start of dosing.

End point type	Other pre-specified

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
03 June 2013	<ul style="list-style-type: none">- Clarified inclusion criterion, effective barrier method of contraception, as the combination of condom or diaphragm plus a spermicide.- Clarified excluded screening serum creatinine conventional reference level to 2 decimals 2.00 milligram per deciliter (mg/dL) and corrected reference level 177 micromole per liter (mmol/L).- Added cholestyramine as example of excluded bile acid resins.- Revised tolerability assessment to be consistent with protocol body.- Added 8-week time point for serum bile acid level and 7alpha-hydroxy-4-cholesten-3-one (7aC4).- Modified section to provide instructions to investigator for unblinding in the event of an emergency situation when knowledge of the treatment assignment will impact the clinical management of the subject.- Added safety monitoring for any subject with an increase in ALP $>1.5 \times$ Baseline at any time during the study.- Added stopping rule for any subject with an increase in ALP $>2 \times$ baseline at any time during the study.- Added study stopping rules in the event that 10 subjects discontinue dosing for any of the criteria.- Added collection of blood sample for cholestasis biomarkers at Week 8.- Corrected typographical errors in protocol.
28 February 2014	<ul style="list-style-type: none">- Revised inclusion criterion, to allow for inclusion of subjects who are on a stable dose of UDCA for greater than equal to (\geq) 3 months or are intolerant of UDCA (no UDCA for ≥ 3 months).- Revised Inclusion Criterion, to also include subjects with ability to read and understand Spanish.- Screening period increased to "up to 5 weeks" (was "up to 4 weeks") and total study duration increased to approximately 22 weeks (was approximately 21 weeks).- Corrected time points for evaluation of pruritus using the average daily Adult ItchRO score (4, 8, and 13 weeks) to be consistent with protocol text.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No
