Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-000636-PIP01-09
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	07 March 2018
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	07 March 2018
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective of this study was to investigate the clinical response to fidaxomicin granules for oral suspension or tablets and vancomycin oral liquid or capsules of pediatric participants with Clostridium Difficile-Associated Diarrhea (CDAD) from birth to < 18 years of age.

Protection of trial subjects:

This clinical study was written, conducted and reported in accordance with the protocol, International Council for Harmonisation of Technical Requirements for Pharmaceuticals for Human Use (ICH), Good Clinical Practice (GCP) Guidelines, and applicable local regulations, including the European Directive 2001/20/EC, on the protection of human rights, and with the ethical principles that have their origin in the Declaration of Helsinki. Astellas ensures that the use and disclosure of protected health information (PHI) obtained during a research study complies with the federal, national and/or regional legislation related to the privacy and protection of personal information.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	09 January 2015
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Belgium: 7
Country: Number of subjects enrolled	Canada: 1
Country: Number of subjects enrolled	France: 11
Country: Number of subjects enrolled	Germany: 5
Country: Number of subjects enrolled	Hungary: 17
Country: Number of subjects enrolled	Italy: 8
Country: Number of subjects enrolled	Poland: 14
Country: Number of subjects enrolled	Romania: 9
Country: Number of subjects enrolled	Spain: 19
Country: Number of subjects enrolled	United States: 57
Worldwide total number of subjects	148
EEA total number of subjects	90

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	30
Children (2-11 years)	89
Adolescents (12-17 years)	29
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Pediatric participants with clostridium difficile-associated diarrhea (CDAD) were enrolled in this multicenter study.

Pre-assignment

Screening details:

Eligible participants who met inclusion criteria and none of the exclusion criteria were enrolled, 159 participants were assessed for eligibility of whom 148 were randomized. Participants were randomized to either fidaxomicin or vancomycin in a 2:1 ratio, stratified by age group.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Single blind
Roles blinded	Investigator ^[1]

Arms

Are arms mutually exclusive?	Yes
Arm title	Fidaxomicin

Arm description:

Participants from birth to < 6 years of age received weight based doses of fidaxomicin oral suspension (32 mg/kg/day with a maximum dose of 400 mg/day divided in 2 doses) 2 times daily for 10 days. Participants aged ≥ 6 years to < 18 years of age received a 200 mg fidaxomicin tablet 2 times daily for 10 days.

Arm type	Experimental
Investigational medicinal product name	Fidaxomicin tablets
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Participants aged ≥ 6 years to < 18 years of age received a 200 mg fidaxomicin tablet 2 times daily for 10 days.

Investigational medicinal product name	Fidaxomicin oral suspension
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Oral suspension
Routes of administration	Oral use

Dosage and administration details:

Participants from birth to < 6 years of age received weight based doses of fidaxomicin oral suspension (32 mg/kg/day with a maximum dose of 400 mg/day, divided in 2 doses) 2 times daily for 10 days.

Arm title	Vancomycin
------------------	------------

Arm description:

Participants from birth to < 6 years of age received weight based doses of vancomycin oral liquid (40 mg/kg/day with a maximum dose of 500 mg/day divided in 4 doses) 4 times daily for 10 days. Participants aged ≥ 6 years to < 18 years of age received a 125 mg vancomycin capsule 4 times daily for 10 days.

Arm type	Active comparator
----------	-------------------

Investigational medicinal product name	Vancomycin oral liquid
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Oral liquid
Routes of administration	Oral use

Dosage and administration details:

Participants from birth to < 6 years of age received weight based doses of vancomycin oral liquid (40 mg/kg/day with a maximum dose of 500 mg/day divided in 4 doses) 4 times daily for 10 days.

Investigational medicinal product name	Vancomycin capsules
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Participants aged ≥ 6 years to < 18 years of age received a 125 mg vancomycin capsule 4 times daily for 10 days.

Notes:

[1] - The roles blinded appear inconsistent with a simple blinded trial.

Justification: Double blinding of the study drug for this pediatric study population was not feasible, given dosing constraints, the study was investigator-blinded only.

Number of subjects in period 1	Fidaxomicin	Vancomycin
Started	100	48
Treated	98	44
Completed	95	42
Not completed	5	6
Randomized but did not receive treatment	2	3

End points

End points reporting groups

Reporting group title	Fidaxomicin
Reporting group description: Participants from birth to < 6 years of age received weight based doses of fidaxomicin oral suspension (32 mg/kg/day with a maximum dose of 400 mg/day divided in 2 doses) 2 times daily for 10 days. Participants aged ≥ 6 years to < 18 years of age received a 200 mg fidaxomicin tablet 2 times daily for 10 days.	
Reporting group title	Vancomycin
Reporting group description: Participants from birth to < 6 years of age received weight based doses of vancomycin oral liquid (40 mg/kg/day with a maximum dose of 500 mg/day divided in 4 doses) 4 times daily for 10 days. Participants aged ≥ 6 years to < 18 years of age received a 125 mg vancomycin capsule 4 times daily for 10 days.	
Subject analysis set title	Fidaxomin all formulations
Subject analysis set type	Full analysis
Subject analysis set description: Participants received either fidaxomicin oral suspension or tablet formulation.	
Subject analysis set title	Fidaxomicin oral suspension
Subject analysis set type	Full analysis
Subject analysis set description: Participants received fidaxomicin oral suspension formulation.	
Subject analysis set title	Fidaxomicin tablets
Subject analysis set type	Full analysis
Subject analysis set description: Participants received fidaxomicin tablets formulation.	
Subject analysis set title	Vancomycin oral liquid
Subject analysis set type	Full analysis
Subject analysis set description: Participants received vancomycin oral liquid formulation.	
Subject analysis set title	Full Analysis Set (FAS)
Subject analysis set type	Full analysis
Subject analysis set description: The FAS consisted of all randomized participants who received at least 1 dose of study drug. In the FAS, participants were allocated to the treatment arm corresponding to the study medication that the participant was randomized to (treatment allocation as randomized).	
Subject analysis set title	Safety Analysis Set (SAF)
Subject analysis set type	Safety analysis
Subject analysis set description: The SAF consisted of all randomized participants who received at least 1 study drug dose. In the SAF, participants were allocated to the treatment arm corresponding to study drug first administered (fidaxomicin or vancomycin), even if it differed from the treatment randomized to.	

Primary: Percentage of Participants with Confirmed Clinical Response (CCR) at End of Treatment (EOT) +2 Days

End point title	Percentage of Participants with Confirmed Clinical Response (CCR) at End of Treatment (EOT) +2 Days
End point description: Initial clinical response (ICR) for ages from birth to < 2 years was defined as absence of watery diarrhea for 2 consecutive treatment days, remaining well until study drug discontinuation. ICR for ages ≥ 2 years to < 18 years was defined as improvement in number and character of bowel movements as determined by < 3 unformed bowel movements (UBMs) per day for 2 consecutive treatment days, remaining well until study drug discontinuation. CCR was defined for both age groups as not requiring further CDAD therapy within 2 days after study drug completion, and was reported with a positive (Yes)	

or negative (No) outcome. Resolution of diarrhea was assessed during interviews of participant/parent/legal guardian, supplemented by review of personal records (if hospitalized) and checked for presence of watery diarrhea (ages from birth to < 2 years) or number of UBMs (for ages ≥ 2 years to < 18 years). The analysis population consisted of the FAS.

upper limit	23.9

Secondary: Percentage of Participants with Sustained Clinical Response (SCR) at EOT +9 Days

End point title	Percentage of Participants with Sustained Clinical Response (SCR) at EOT +9 Days
-----------------	--

End point description:

SCR at EOT + 9 days was defined as CCR (EOT + 2 days) without CDAD recurrence until assessment at EOT +9 days during the follow-up period. Recurrence for ages from birth to < 2 years was defined as re-establishment of watery diarrhea after CCR to an extent that was greater than that noted on the last day of study drug with positive direct or indirect testing for the presence of toxigenic *Clostridium difficile* (C. difficile) in stool and that, in the investigator's opinion, required retreatment with CDAD anti-infective therapy. Recurrence for ages ≥ 2 years < 18 years was defined as re-establishment of diarrhea after CCR to an extent (as measured by the frequency of UBMs) that was greater than that noted on the last day of study drug with positive direct or indirect testing for the presence of toxigenic C. difficile in stool and that, in the investigator's opinion, required retreatment with CDAD anti-infective therapy. Secondary: Percentage of Participants with SCR at End of Study (EOS) (EOT +30 Days)

End point title	Percentage of Participants with SCR at End of Study (EOS) (EOT +30 Days)
-----------------	--

End point description:

SCR at EOS was defined as CCR (EOT + 2 days) without CDAD recurrence until assessment at EOS (EOT + 30 days) during the follow-up period. Recurrence for ages from birth to < 2 years was defined as re-establishment of watery diarrhea after CCR to an extent that was greater than that noted on the last day of study drug with positive direct or indirect testing for the presence of toxigenic *C. difficile* in stool and that, in the investigator's opinion, required retreatment with CDAD anti-infective therapy. Recurrence for ages ≥ 2 years < 18 years was defined as re-establishment of diarrhea after CCR to an extent (as measured by the frequency of UBMs) that was greater than that noted on the last day of study drug with positive direct or indirect testing for the presence of toxigenic *C. difficile* in stool and that, in the investigator's opinion, required retreatment with CDAD anti-infective therapy. The analysis population consisted of the FAS (participants with CCR at EOT +2 days).

Secondary: Time to Resolution of Diarrhea (TTRD)

End point title	Time to Resolution of Diarrhea (TTRD)
End point description:	
TTRD for ages from birth < 2 years was defined as time elapsing (hours rounded up from minutes > 30) from treatment start (time of first study drug dose) to diarrhea resolution (time of last episode of watery diarrhea the day prior to the first of 2 consecutive days without watery diarrhea sustained through EOT). TTRD for ages ≥ 2 years to < 18 years was defined as time elapsing (hours rounded up from minutes > 30) from treatment start (time of first dose) to diarrhea resolution (time of the last UBM the day prior to the first of 2 consecutive days of < 3 UBMs sustained through EOT). TTRD by Kaplan-Meier Method. Those who completed treatment but did not show diarrhea resolution until EOT were censored at Day 10/240 hours. Those who did not complete treatment, discontinued earlier but did not show diarrhea resolution until disc. day were censored at disc. (days converted to hours). Those whose diarrhea did not continue after first dose were included with a TTRD of 1 hour. FAS.

Secondary: Time to Recurrence of CDAD for Participants with CCR at EOT +2 Days

End point title	Time to Recurrence of CDAD for Participants with CCR at EOT +2 Days
-----------------	---

End point description:

Time to recurrence was defined as the time (days) from CCR until the onset of recurrence. Time to recurrence of CDAD by Kaplan-Meier Method. Data for 95% CI was not evaluable due to insufficient number of participants with events. Data not evaluable denoted as "99999." Although median time was evaluable (25 days for the fidaxomicin arm and 26 days for the vancomycin arm) "99999" was entered to bypass system validation error, since 95% CI was not evaluable and system requires "99999" to be entered for data not available (the median values are not between the low and high values of "99999". The analysis population consisted of the FAS (participants with CCR at EOT +2 days). Participants with CCR at EOT+2 days, who completed the follow-up period but did not experience a recurrence of CDAD were censored at EOT+30 days and those who did not complete the follow-up period and discontinued during this period and did not experience a recurrence of CDAD were censored at day of discontinuation.

Secondary: Number of Participants with Adverse Events (AEs)

End point title	Number of Participants with Adverse Events (AEs)
-----------------	--

End point description:

An adverse event (AE) was defined as any untoward medical occurrence in a participant administered a study drug or who had undergone study procedures which did not necessarily have a causal relationship with this treatment. This included abnormal laboratory tests, vital signs, electrocardiogram data or physical examinations that were defined as AEs if the abnormality induced clinical signs or symptoms, required active intervention, interruption or discontinuation of study drug or was clinically significant in the investigator's opinion. The following standard with 3 grades was used to measure the severity of AEs, including abnormal clinical laboratory values: • Mild: No disruption of normal daily activities • Moderate: Affected normal daily activities • Severe: Inability to perform daily activities. A treatment-emergent adverse event (TEAE) was defined as an AE observed after starting administration of the test drug/comparative drug. The analysis population consisted of the SAF.

occurrences (all)	8	8	
Skin and subcutaneous tissue disorders			
Pruritus			
subjects affected / exposed	3 / 98 (3.06%)	3 / 44 (6.82%)	
occurrences (all)	3	3	
Infections and infestations			
Oral candidiasis			
subjects affected / exposed	3 / 98 (3.06%)	3 / 44 (6.82%)	
occurrences (all)	3	3	

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
21 November 2014	<p>The changes include:</p> <ul style="list-style-type: none">• Throughout the protocol, the age ranges '< 6 months of age' were changed to 'from birth'. <p>Nonsubstantial changes were made to the protocol:</p> <ul style="list-style-type: none">• To update the contract research organization (CRO) contact for reporting SAEs and contact details of clinical research contact;• To add text on the coadministration of P-glycoprotein inhibitor to the introduction;• To add the term palatability to study objectives;• To update the number of study sites to approximately 65 to 80 sites;• To move palatability from exploratory endpoint to secondary endpoint, and replace cultures with samples in the exploratory microbiology endpoint;• To update statistical methodology (several sections);• To update the schedule of assessments, changing 'Follow-up visit' to 'Follow-up TC';• To update the timeframe for positive detection of CDAD, changing it from within 48 hours to within 72 hours prior to randomization;• To update the risk-benefit assessment, adding text on children < 6 months of age and on hypersensitivity reactions;• To add weight-based dosing instruction of the fidaxomicin oral suspension and the vancomycin oral liquid;• To update the specified AEs of interest and add lack of efficacy to the special situation events; and• To include edits for consistency and other minor administrative-type corrections.
21 July 2015	<p>The changes include:</p> <ul style="list-style-type: none">• Inclusion criterion No. 2 was amended to specify that in the US, subjects could only be included if aged ≥ 6 months to < 18 years. <p>Nonsubstantial changes were made to the protocol:</p> <ul style="list-style-type: none">• To update safety reporting, removing reporting to delegated CRO only for North American sites;• To update contact details for the clinical research contact;• To extend the planned study period based on expected recruitment rate;• To update/revise study design to investigate subjects from birth instead of ≥ 6 months, with the exception of the US;• To update/revise study design to administer fidaxomicin tablets to subjects aged ≥ 6 years instead of from birth;• To update concomitant treatment, including the most recent use of fidaxomicin or any macrolide antibiotic to be recorded in the electronic Case Report Form (eCRF);• To update discontinuation of individual subjects, updating the terminology in alignment with new process for protocol deviation;• To include instructional text related to reporting certain events as AEs based on local requirements; and• To include edits for consistency and other minor administrative-type corrections.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
