Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	16 February 2016
Is this the analysis of the primary completion data?	Yes
Primary completion date	16 February 2016
Global end of trial reached?	Yes
Global end of trial date	16 February 2016
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective of the study was to characterise the pharmacokinetic (PK) profile of octreotide after each injection of CAM2029 (during Period 1) as compared with baseline PK Sandostatin long acting release (LAR) (during Period 0) in patients with acromegaly and NETs.

Protection of trial subjects:

The study was conducted according to the ethical principles of the Declaration of Helsinki. Informed consent was obtained from each patient in writing before any study-specific procedure was performed. The study was described by a nurse/study coordinator/the Investigator, who answered any questions, and written information was also provided. Final informed consent was retrieved by the physician, either investigator or co-investigator.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	09 January 2015
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	France: 5
Country: Number of subjects enrolled	Germany: 4
Country: Number of subjects enrolled	Italy: 3
Worldwide total number of subjects	12
EEA total number of subjects	12

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	6

From 65 to 84 years	6
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

This study had planned to enroll 24 patients, however, only 12 patients (7 with acromegaly and 5 with neuroendocrine tumors [NETs]) were enrolled in this study.

Pre-assignment

Screening details:

Screening took place during the 14-day screening period from Day -42 to Day -29.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Blinding implementation details:

This was an open label trial.

Arms

Are arms mutually exclusive?	Yes
Arm title	Acromegaly

Arm description:

Twenty-eight days after the last injection of Sandostatin LAR (i.e. on Day 0), patients were randomized into the CAM2029 treatment phase (i.e. Period 1) and received their first subcutaneous thigh injection of 20 mg or 10 mg CAM2029 on Day 0. Patients randomized to receive 20 mg of CAM2029 were administered three upper thigh subcutaneous injections CAM2029 20 mg q4w on Days 0, 28 and 56; whereas patients randomized to receive 10 mg of CAM2029 were administered six upper thigh injections CAM2029 10 mg q2w on Days 0, 14, 28, 42, 56 and 70.

Arm type	Experimental
Investigational medicinal product name	CAM2029
Investigational medicinal product code	
Other name	Octreotide hydrochloride FluidCrystal injection depot
Pharmaceutical forms	Injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Patients were randomized to receive either 10 mg or 20 mg of CAM2029. Patients randomized to 20 mg of CAM2029 were administered three upper anterior thigh SC injections of CAM2029 20 mg q4w on Days 0, 28, and 56 and patients randomized to 10 mg of CAM2029 were administered six upper anterior thigh SC injections of CAM2029 10 mg q2w on Days 0, 14, 28, 42, 56, and 70.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Adverse events (AEs) were collected from the date of signing of informed consent to the final follow up visit.

Adverse event reporting additional description:

In case of early termination (before Day 84), the patients were monitored for safety for 28 days after the last CAM2029 treatment cycle and underwent assessments and procedures at the end of the Post-treatment Phase (Day 111).

Assessment type	Non-systematic

Hyperglycaemia subjects affected / exposed occurrences (all)	1 / 7 (14.29%) 1	0 / 5 (0.00%) 0	

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
12 June 2014	Amendment 1 was implemented based on request from Swedish Health Authority primarily: 1. Updated the name of the Medical Monitor. 2. Clarified the exclusion criteria for each patient population to exclude patients with angina or a history of myocardial infarction within 6 months prior to starting treatment. 3. Clarified that patients were to restart their pre-study regimen with Sandostatin LAR on Day 84 (Period 2). 4. Clarified the Schedule of Events Table that safety laboratory test samples would only be taken on dosing days for each patient population.
25 July 2014	Amendment 2 was implemented based on request from the French Independent Ethics Committee: 1. Added assessments for pre-dose fasting plasma glucose on all days when PK sampling was performed and provided instruction for the management of elevated fasting plasma glucose. 2. Added procedures and specifications to manage hepatic safety by monitoring clinical laboratory values. 3. Added an HbA1c test to occur on Day 56.
29 August 2014	Amendment 3 primarily implemented the following modifications: 1. Specified urgent safety measures as the trigger for early termination on a study level. 2. Added patient discontinuation criteria.
23 September 2014	Amendment 4 was a substantial global amendment to implement the following modifications, including country-specific (previous) amendments: 1. Authorized the use of Longastatina LAR for patients in Italy. Longastatina LAR is the same drug as Sandostatin LAR and is manufactured by the same company, but is commercialized as Longastatina LAR in Italy. 2. Updated the name of the Medical Monitor. 3. Changed the injection site from buttock to upper thigh. 4. Specified urgent safety measures as the trigger for early termination on a study level. 5. Clarified the exclusion criteria for each patient population to exclude patients with angina or a history of myocardial infarction within 6 months prior to screening. 6. Updated exclusion criteria regarding previous surgeries to include the 2-month period before screening rather than randomization. 7. Updated exclusion criteria regarding previous alcohol abuse to include the 12-month period before screening rather than randomization. 8. Added exclusion criteria regarding prior medications. 9. Clarified that patients would restart their pre-study regimen with Sandostatin LAR on Day 84 (Period 2). 10. Added patient discontinuation criteria based on safety criteria. 11. Added procedures and specifications to manage hepatic safety by monitoring clinical laboratory values. 12. Added an HbA1c test to occur on Day 56. 13. Added assessments for pre-dose fasting plasma glucose on all days when PK sampling performed and provided instruction for the management of elevated fasting plasma glucose. 14. Allowed historical abdominal ultrasound of the gallbladder for study use, if was performed within 2 months prior to screening. 15. Clarified the Schedule of Events Tables that safety laboratory test samples would only be taken on dosing days for each patient population.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
