Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	26 November 2014
Is this the analysis of the primary completion data?	Yes
Primary completion date	26 November 2014
Global end of trial reached?	Yes
Global end of trial date	26 November 2014
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective was to demonstrate that the mean intraocular pressure (IOP) reduction after 3 months (90 days) of treatment with latanoprostene bunod (LBN) ophthalmic solution 0.024% once daily (QD) is non-inferior to timolol maleate 0.5% twice daily (BID).

Protection of trial subjects:

This study was conducted in compliance with the study protocol and in accordance with Good Clinical Practices (GCPs), as described in the International Conference on Harmonisation (ICH) Harmonized Tripartite Guidelines for GCP, the US Code of Federal Regulations dealing with clinical studies (21 CFR Parts 11, 50, 54, 56, and 312), the ethical principles in the Declaration of Helsinki, and applicable local regulations.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	28 January 2013
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Germany: 6
Country: Number of subjects enrolled	United Kingdom: 6
Country: Number of subjects enrolled	Italy: 1
Country: Number of subjects enrolled	United States: 407
Worldwide total number of subjects	420
EEA total number of subjects	13

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0

Adults (18-64 years)	195
From 65 to 84 years	220
85 years and over	5

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

Participants receiving an IOP-lowering medication before study start underwent a washout period. Participants were randomized in a 2:1 ratio on Day 0 to receive LBN ophthalmic solution 0.024% QD and vehicle QD or timolol maleate 0.5% BID. After Month 3 visit assessments, participants from both arms received LBN ophthalmic solution 0.024% QD only.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
Arm title	BOL-303259-X

Arm description:

BOL-303259-X ophthalmic solution QD (evening [PM]) and vehicle QD (morning [AM]) administered for 3 months (Visit 6) into the study eye(s). BOL-303259-X: BOL-303259-X will be administered QD in the evening and its vehicle administered QD in the morning.

BOL-303259-X: All participants will receive a topical ocular BOL-303259-X QD in the evening from 3 months (Visit 6) through 6 months (Visit7).

Arm type	Experimental
Investigational medicinal product name	BOL-303259-X
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Ear/eye drops, solution
Routes of administration	Ophthalmic use

Dosage and administration details:

BOL-303259-X was administered as per the dose and schedule specified in the respective arms.

Arm title	Timolol
------------------	---------

Arm description:

Timolol maleate ophthalmic solution, 0.5%, administered BID for 3 months (Visit 6) into study eye(s). Timolol: Timolol will be administered BID once in the morning and once in the evening.

BOL-303259-X: All participants will receive a topical ocular BOL-303259-X QD in the evening from 3 months (Visit 6) through 6 months (Visit7).

Arm type	Active comparator
Investigational medicinal product name	Timolol
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Ear/eye drops, solution
Routes of administration	Ophthalmic use

Dosage and administration details:

Timolol was administered as per the dose and schedule specified in the respective arms.

Number of subjects in period 1	BOL-303259-X	Timolol
Started	283	137
