End point title	Part A Treatment Cohort: Number of Subjects With Treatment-Emergent Adverse Events (AEs) and Serious Adverse Events (SAEs) <sup>[1][2]</sup>
-----------------	--

End point description:

AE: as any untoward medical occurrence in a subject during the study; the event does not necessarily have a causal relationship with the treatment. This includes any newly occurring event or previous condition that has increased in severity or frequency after informed consent form is signed. AE includes serious as well as non-serious AEs. SAE (subset of AE): medical event or condition, which falls into any of the following categories, regardless of its relationship to the study drug: death, life threatening adverse experience, In-patient hospitalization/prolongation of hospitalization, persistent/significant disability or incapacity, congenital anomaly/birth defect, important medical event. Any AE that increased in severity or newly developed at or after initial dosing of study drug to 28 days after last dose of study drug was considered treatment-emergent. Safety Set (study 105) included all subjects in Treatment Cohort Part A who were exposed to any amount of study drug.

AE: as any untoward medical occurrence in a subject during the study; the event does not necessarily have a causal relationship with the treatment. This includes any newly occurring event or previous condition that has increased in severity or frequency after informed consent form is signed. AE includes serious as well as non-serious AEs. SAE (subset of AE): medical event or condition, which falls into any of the following categories, regardless of its relationship to the study drug: death, life threatening adverse experience, In-patient hospitalization/prolongation of hospitalization, persistent/significant disability or incapacity, congenital anomaly/birth defect, important medical event. Any AE that increased in severity or newly developed at or after initial dosing of study drug to 28 days after last dose of study drug was considered treatment-emergent. Safety Set (study 105) included all subjects in the Treatment Cohort Part B who were exposed to any amount of study drug.

## Secondary: Part B Treatment Cohort: Percentage of Subjects With Response Based on Relative Change in Percent Predicted FEV1 From Baseline

End point title	Part B Treatment Cohort: Percentage of Subjects With Response Based on Relative Change in Percent Predicted FEV1 From Baseline
-----------------	--

End point description:

FEV1 is the volume of air that can forcibly be blown out in one second, after full inspiration. Hankinson and Wang standards were used to calculate percent predicted FEV1 (for age, gender, race, and height). Percentage of subjects with at least 5% relative change in percent predicted FEV1 from Baseline were reported. FAS (Study 102) was used for Arm 6 and 7, and included all subjects randomized in the cohort 4 of study 102 and dosed. Analysis was performed using baseline of the previous study VX09-809-102 (2010-020413-90) for Arm 6 and 7.

End point description:

AE: as any untoward medical occurrence in a subject during the study; the event does not necessarily have a causal relationship with the treatment. This includes any newly occurring event or previous condition that has increased in severity or frequency after the informed consent form is signed. AE includes serious as well as non-serious AEs. SAE (subset of AE): medical event or condition, which falls into any of the following categories, regardless of its relationship to the study drug: death, life threatening adverse experience, In-patient hospitalization/prolongation of hospitalization, persistent/significant disability or incapacity, congenital anomaly/birth defect, important medical event. Safety Set (study 105) included all subjects who were enrolled in Part A Observation Cohort.

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
05 February 2014	- An additional mandatory testing to monitor the safety of liver function was added as a result of safety findings reported in Council for International Organizations of Medical Sciences (CIOMS) AE-2013-011098, dated 21 January 2014.
22 September 2014	- Included an exploratory, optional, non-interventional data collection for Part A Treatment Cohort subjects to collect respiratory culture results from the 12 months before the subject's first dose in Studies 103 (2012-003989-40) or 104 (2012-003990-24) through the end of the treatment period of Study 105 (2013-000604-41). - Reduced the frequency of liver function test (LFT) sample collection after Week 24. These changes were based on the review of interim safety data by both the sponsor and the data monitoring committee. - Updates were made to reflect that given the lack of overall efficacy, all subjects from Part B were to be notified of the results and that Vertex strongly recommended that all subjects from Part B be discontinued from Study 105 (2013-000604-41). If, in the opinion of the investigator, there were certain subjects for whom there was evidence of clinical benefit that outweighed potential risks, the investigator was to contact the Vertex medical monitor for approval to continue an individual subject in the study. - Updated that internal Vertex team could be un-blinded once all subjects reached Week 24 and data lock for interim analysis had occurred.

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Analysis using baseline values of the current study 105 (2013-000604-41) was not performed for Part B Treatment Cohort .
