

Clinical trial results:

A Phase III, Open-Label, Single-Arm, Multicenter Study to Evaluate the Safety and Immunogenicity of a Trivalent, Surface Antigen Inactivated Subunit Influenza Virus Vaccine Produced in Mammalian Cell Culture (Optaflu®) in Healthy Adults.

Summary

EudraCT number	2013-000621-30
Trial protocol	DE
Global end of trial date	08 September 2013

Results information

Result version number	v2 (current)
This version publication date	29 July 2016
First version publication date	22 October 2014
Version creation reason	<ul style="list-style-type: none">• Correction of full data set Required for the re-QC because of EudraCT system glitch as possible updates to results are required. Moreover, the study is now transferred to another primary user.

Notes:	

General information about the trial

Main objective of the trial:

Immunogenicity Objective

To evaluate the antibody response to each influenza vaccine antigen after vaccination with the TIVc vaccine, as measured by single radial hemolysis (SRH) or hemagglutination inhibition (HI) assay in accordance with Guidance CPMP/BWP/214/96

Safety Objective

To evaluate the safety of TIVc in adult subjects in compliance with the requirements of the current European Union recommendations for clinical trials related to yearly licensing of influenza vaccines (CPMP/BWP/214/96)

Protection of trial subjects:

This clinical study was designed, implemented and reported in accordance with the ICH Harmonized Tripartite Guidelines for GCP, with applicable local regulations, including the European Directive 2001/20/EC, the US CFR Title 21, and the Japanese Ministry of Health, Labor, and Welfare, Novartis codes on the protection of human rights, and with the ethical principles laid down in the Declaration of Helsinki.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	15 August 2013
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Germany: 126
Worldwide total number of subjects	126
EEA total number of subjects	126

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	82
From 65 to 84 years	44
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Subjects were enrolled from 1 study centre in Germany

Pre-assignment

Screening details:

All enrolled subjects were included in the study

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

Arm title	TIVc (≥ 18 to ≤ 60 Years)
------------------	--------------------------------------

Arm description:

Adult subjects received one dose of the cell-derived trivalent, surface antigen inactivated subunit influenza virus vaccine (TIVc) formulation 2013/2014 Northern Hemisphere

Arm type	Experimental
Investigational medicinal product name	Trivalent influenza virus vaccine (surface antigen, inactivated, cell-based)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Suspension for injection
Routes of administration	Intramuscular use

Dosage and administration details:

Single 0.5-mL dose intramuscularly on day 1

Arm title	TIVc (≥ 61 Years)
------------------	-------------------------

Arm description:

Elderly subjects received one dose of the cell-derived trivalent, surface antigen inactivated subunit influenza virus vaccine (TIVc) formulation 2013/2014 Northern Hemisphere

Arm type	Experimental
Investigational medicinal product name	Trivalent influenza virus vaccine (surface antigen, inactivated, cell-based)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Suspension for injection
Routes of administration	Intramuscular use

Dosage and administration details:

Single 0.5-mL dose intramuscularly on day 1

Number of subjects in period 1	TIVc (≥ 18 to ≤ 60 Years)	TIVc (≥ 61 Years)
Started	63	63
Completed	63	63

Baseline characteristics

Reporting groups

Reporting group title	TIVc (≥ 18 to ≤ 60 Years)
Reporting group description: Adult subjects received one dose of the cell-derived trivalent, surface antigen inactivated subunit influenza virus vaccine (TIVc) formulation 2013/2014 Northern Hemisphere

Subject analysis set title	Safety Set (unsolicited AEs)
Subject analysis set type	Safety analysis
Subject analysis set description: All subjects in the Exposed Set who had post-vaccination unsolicited AE records	

Primary: Number of subjects reporting unsolicited adverse events after receiving one dose of TIVc.

End point title	Number of subjects reporting unsolicited adverse events after receiving one dose of TIVc. ^[1]
End point description: The number of subjects in both age groups reporting any unsolicited AEs (between Day 1 to 4), serious adverse events (SAEs), medically attended AEs, AEs leading to premature withdrawal (throughout the study period), after receiving one dose of TIVc is reported. The analysis was performed on the Solicited Safety Set.	
End point type	Primary
End point timeframe: Day 1 through Day 22 post-vaccination	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: All safety analyses were run in the safety population.

End point values	TIVc (≥18 to ≤60 Years)	TIVc (≥ 61 Years)		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	63	63		
Units: Subjects				
Any AE (Day 1 to 4)	6	4		
At least Possibly related AE	2	0		
Any SAE	1	0		
At least Possibly related SAE	0	0		
Medically attended AE	4	3		
AE leading to discontinuation	0	0		
Death	0	0		

Statistical analyses

No statistical analyses for this end point

Primary: Percentage of subjects with Single Radial Hemolysis (SRH) areas ≥25mm², against each of three vaccine strains after receiving one dose of TIVc

End point title	Percentage of subjects with Single Radial Hemolysis (SRH) areas ≥25mm ² , against each of three vaccine strains after receiving one dose of TIVc ^[2]
-----------------	--

End point description:

Immunogenicity was assessed in terms of percentages of subjects in both age groups with SRH areas ≥25mm² against each of the three vaccine strains, three weeks after receiving one dose of TIVc. The related European (CHMP) criterion for the assessment of immunogenicity is met if the percentage of subjects achieving post-vaccination SRH areas ≥ 25mm² is >70% for adults aged 18 to ≤60 years and >60% for subjects aged ≥61 years. The analysis was performed on the Per Protocol Set.

End point type	Primary
----------------	---------

End point timeframe:

Day 22 post-vaccination

Notes:

[2] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: There was no statistical null hypothesis associated with the immunogenicity objective.

End point values	TIVc (≥18 to ≤60 Years)	TIVc (≥ 61 Years)		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	62	61		
Units: Percentage of subjects				
number (confidence interval 95%)				
Day 1 (H1N1 strain)	66 (53 to 78)	41 (29 to 54)		
Day 22 (H1N1 strain)	98 (91 to 100)	84 (72 to 92)		
Day 1 (H3N2 strain)	44 (31 to 57)	39 (27 to 53)		
Day 22 (H3N2 strain)	92 (82 to 97)	77 (65 to 87)		
Day 1 (B strain)	68 (55 to 79)	77 (65 to 87)		
Day 22 (B strain)	98 (91 to 100)	98 (91 to 100)		

Statistical analyses

No statistical analyses for this end point

Primary: Percentage of subjects achieving seroconversion or significant increase by SRH area, against each of three vaccine strains after receiving one dose of TIVc

End point title	Percentage of subjects achieving seroconversion or significant increase by SRH area, against each of three vaccine strains after receiving one dose of TIVc ^[3]
-----------------	--

End point description:

Immunogenicity was assessed in terms of percentages of subjects in both age groups achieving seroconversion or significant increase by SRH area against each of the three vaccine strains, three weeks after receiving one dose of TIVc. Seroconversion is defined as percentage of subjects with a pre-vaccination SRH area $\leq 4\text{mm}^2$ achieving a post-vaccination SRH area $\geq 25\text{mm}^2$. Significant increase is defined as percentage of subjects with a pre-vaccination SRH area $> 4\text{mm}^2$ achieving at least 50% increase in post-vaccination SRH area. The related European (CHMP) criterion for the assessment of immunogenicity is met if the percentage of subjects achieving post-vaccination SRH areas $\geq 25\text{mm}^2$ is $> 40\%$ for adults aged 18 to ≤ 60 years and $> 30\%$ for subjects aged ≥ 61 years. The analysis was performed on the Per Protocol Set.

End point type	Primary
----------------	---------

End point timeframe:

Day 22 post-vaccination

Notes:

[3] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: There was no statistical null hypothesis associated with the immunogenicity objective.

End point values	TIVc (≥ 18 to ≤ 60 Years)	TIVc (≥ 61 Years)		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	62	61		
Units: Percentage of subjects				
number (confidence interval 95%)				
H1N1 strain	68 (55 to 79)	56 (42 to 68)		
H3N2 strain	65 (51 to 76)	46 (33 to 59)		
B strain	58 (45 to 70)	39 (27 to 53)		

Statistical analyses

No statistical analyses for this end point

Primary: Geometric mean ratio (GMR) of post-vaccination versus pre-vaccination Geometric Mean Areas (GMAs), against each of three vaccine strains after receiving one dose of TIVc

End point title	Geometric mean ratio (GMR) of post-vaccination versus pre-vaccination Geometric Mean Areas (GMAs), against each of three vaccine strains after receiving one dose of TIVc ^[4]
-----------------	--

End point description:

The antibody responses were evaluated in terms of GMRs of post-vaccination GMAs to pre-vaccination GMAs against each of the three vaccine strains, three weeks after receiving one dose of TIVc. The related European (CHMP) criterion for the assessment of immunogenicity is met if the GMR day 22/day 1 is > 2.5 for adults aged 18 to ≤ 60 years and > 2.0 in for subjects aged ≥ 61 years. The analysis was performed on the Per Protocol Set.

End point type	Primary
----------------	---------

End point timeframe:

Day 22/Day 1

Notes:

[4] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: There was no statistical null hypothesis associated with the immunogenicity objective.

End point values	TIVc (≥18 to ≤60 Years)	TIVc (≥ 61 Years)
