

Clinical trial results:

A randomized, double-blind, multicenter study to demonstrate equivalent efficacy and to compare safety and immunogenicity of a biosimilar adalimumab (GP2017) and Humira® in patients with moderate to severe chronic plaque-type psoriasis

Summary

EudraCT number	2013-000747-11
Trial protocol	BG SK PL
Global end of trial date	25 February 2016

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	09 February 2017
Is this the analysis of the primary completion data?	Yes
Primary completion date	06 July 2015
Global end of trial reached?	Yes
Global end of trial date	25 February 2016
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective of this study was to demonstrate equivalent efficacy of GP2017 and Humira in patients with moderate to severe chronic plaque-type psoriasis with respect to PASI75 response rate at Week 16.

Protection of trial subjects:

This trial was designed, conducted and reported in accordance with the international Conference on Harmonization (ICH) Guidelines for Good Clinical Practice (GCP), applicable local regulations (including European Directive 2001/20/EC), and following the ethical principles laid down in the Declaration of Helsinki. Specific ICH adopted and other relevant international guidelines and recommendations were taken into account as far as meaningfully possible. Safety assessments included adverse events (AEs), vital signs, 12-lead ECG parameters, clinical laboratory, immunogenicity, physical examination and other parameters considered relevant for the safety assessment, of Adalumimab.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	18 December 2013
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	France: 25
Country: Number of subjects enrolled	Slovakia: 31
Country: Number of subjects enrolled	Bulgaria: 31
Country: Number of subjects enrolled	United States: 378
Worldwide total number of subjects	465
EEA total number of subjects	87

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0

Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	413
From 65 to 84 years	52
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

661 patients were screened. 465 patients were randomized 1:1 into Treatment Period 1 and stratified by region (US/EU), body weight (<90/≥90 kg) and prior systemic therapy (no/any). In Treatment Period 2 patients were re-randomized 2:1 to either continue originally assigned treatment or switch treatment and were stratified by region only.

Pre-assignment

Screening details:

Screening lasted for at least 2 weeks and up to 4 weeks. Main inclusion criteria:

- Men or women of at least 18 years
- Chronic plaque-type psoriasis ≥ 6 months before randomization
- Moderate to severe psoriasis :
 - >PASI score ≥ 12
 - > IGA score ≥3
 - > BSA affected by plaque-type psoriasis ≥ 10%
- No previous exposure to adalimumab

Period 1

Period 1 title	Treatment period 1 (Day 1-Week 17)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst

Blinding implementation details:

Patients were asked not to look at the syringes during administration. To maintain the blind of the assessing investigator, independent, unblinded site personnel handled and administered the treatment. Patients, investigator staff, and persons performing the assessments remained blinded to the identity of the treatment until the database lock (Week 51 analysis). After database-lock for the primary analysis only designated sponsor data analysts were unblinded to perform the Week 17 analysis.

Arms

Are arms mutually exclusive?	Yes
Arm title	GP2017

Arm description:

GP2017 subcutaneous injections

Arm type	Experimental
Investigational medicinal product name	GP2017
Investigational medicinal product code	adalimumab
Other name	
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Subcutaneous use

Dosage and administration details:

The proposed biosimilar GP2017 was supplied to the investigators in prefilled syringes containing 40 mg of the active ingredient in a 0.8 mL solution. All study treatments were administered by s.c. injection at a loading dose of 80 mg at Day 1, and subsequent doses of 40 mg eow, starting one week after the loading dose.

Arm title	Humira
Arm description:	
Humira subcutaneous injections	
Arm type	Active comparator

Investigational medicinal product name	Humira
Investigational medicinal product code	adalimumab
Other name	
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Subcutaneous use

Dosage and administration details:

Humira (US Humira in the US and EU Humira in the EU) was supplied to the investigators in prefilled syringes containing 40 mg of the active ingredient in a 0.8 mL solution. All study treatments were administered by s.c. injection at a loading dose of 80 mg at Day 1, and subsequent doses of 40 mg eow, starting one week after the loading dose.

Number of subjects in period 1	GP2017	Humira
Started	231	234
Completed	201	201
Not completed	30	33
Consent withdrawn by subject	15	11
Physician decision	-	2
Adverse event, non-fatal	3	5
Pregnancy	-	1
Lost to follow-up	6	4
Protocol deviation	2	8
Lack of efficacy	4	2

Period 2

Period 2 title	Treatment period 2 (Week 17-35)
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst

Blinding implementation details:

The blinding details were continued as described in Treatment period 1.

Arms

Are arms mutually exclusive?	Yes
Arm title	Humira continued

Arm description:

Humira subcutaneous injections, continued treatment

Arm type	Active comparator
----------	-------------------

Investigational medicinal product name	Humira
Investigational medicinal product code	adalimumab
Other name	
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Subcutaneous use

Dosage and administration details:

Humira ((US Humira in the US and EU Humira in the EU) was supplied to the investigators in prefilled syringes containing 40 mg of the active ingredient in a 0.8 mL solution. All study treatments were administered by s.c. injection, and subsequent doses of 40 mg eow.

Arm title	GP2017 continued
------------------	------------------

Arm description:

GP2017 subcutaneous injections, continued treatment

Arm type	Experimental
Investigational medicinal product name	GP2017
Investigational medicinal product code	adalimumab
Other name	
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Subcutaneous use

Dosage and administration details:

The proposed biosimilar GP2017 was supplied to the investigators in prefilled syringes containing 40 mg of the active ingredient in a 0.8 mL solution. All study treatments were administered by s.c. injection, and subsequent doses of 40 mg eow.

Arm title	Humira switched
------------------	-----------------

Arm description:

Subcutaneous injections switching: Patients started with Humira treatment in Treatment period 1 switched to s.c. injections with GP2017, 40 mg eow between Week 17 to Week 23; then switched to s.c. injections with Humira, 40 mg eow between Week 23 to Week 29; and again switched to s.c. injections with GP2017, 40 mg eow from Week 29 to Week 35.

Arm type	Experimental/Active comparator
Investigational medicinal product name	GP2017 & Humira
Investigational medicinal product code	adalimumab
Other name	
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Subcutaneous use

Dosage and administration details:

The proposed biosimilar GP2017 and Humira (US Humira in the US and EU Humira in the EU) was supplied to the investigators in prefilled syringes containing 40 mg of the active ingredient in a 0.8 mL solution. All study treatments were administered by s.c. injection, and subsequent doses of 40 mg eow.

Arm title	GP2017 switched
------------------	-----------------

Arm description:

Subcutaneous injections switching: Patients started with GP2017 treatment in Treatment period 1 switched to s.c. injections with Humira, 40 mg eow between Week 17 to Week 23; then switched to s.c. injections with GP2017, 40 mg eow between Week 23 to Week 29; and again switched to s.c. injections with Humira, 40 mg eow between Week 29 to Week 35.

Arm type	Experimental/Active comparator
Investigational medicinal product name	Humira & GP2017
Investigational medicinal product code	adalimumab
Other name	
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Subcutaneous use

Dosage and administration details:

Humira (US Humira in the US and EU Humira in the EU) and the proposed biosimilar GP2017 was supplied to the investigators in prefilled syringes containing 40 mg of the active ingredient in a 0.8 mL solution. All study treatments were administered by s.c. injection, and subsequent doses of 40 mg eow.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

AEs are reported from date patient has provided informed consent and until 30 days after the patient has stopped study participation. AEs are analyzed from start date of study treatment to date of study completion/early discontinuation.

Adverse event reporting additional description:

The occurrence of AEs should be sought by non-directive questioning of the patient at each visit during the study. AEs also may be detected when they are volunteered by the patient during or between visits or through physical examination, laboratory test, or other assessments.

Assessment type	Systematic

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
14 October 2013	<p>Sample size was increased from 360 to 448 patients (based on a 95% CI). An expected difference of 3% was assumed for the sample size calculation. The re-randomization scheme at Week 17 was adjusted to a ratio of 2:1. The eligibility of patients based on their TB status was made more restrictive in exclusion criteria: Patients with a positive QFT at screening were no longer eligible for participation in the study to minimize the risk of possible TB re-activation. Correction of inclusion criterion: all s.c. injections were to be done at the site thus no explanation of self-administration. Assessment of exploratory PD biomarkers was excluded from the study. To standardize the process and to protect patients' privacy, it was clarified that the psoriasis lesions were to be photographed only for specific body parts excluding the face. The instructions of storing GP2017 and Humira separated from other investigational medicinal products were removed as deemed not according to the normal routine. The prohibited regimen of topical corticosteroids was specified based on their levels of potency and instructions on how to determine their level of potency were added. It was added that if a patient prematurely discontinued from Treatment Period 1, the Week 17 visit assessments were to be performed as a discontinuation visit. If a patient prematurely discontinued from Treatment Period 2, the Week 35 visit assessments were to be performed. An ECG assessment was added to Week 17 to match the assessments at Week 35. Safety laboratory at Screening (to provide a baseline laboratory assessment prior to study drug administration) and at Week 39 and final follow up 6 weeks after last dosing were added. The frequency of urine pregnancy tests performed in women of childbearing potential was increased to a minimum of every 4 weeks. An additional vital signs assessment at Visit 9 (Week 13) together with a physical examination was added.</p>
10 September 2014	<p>The treatment period was extended to follow the current European guidelines (CHMP/EWP/2454/02) and (CHMP/BMWP/42832/2005), requesting one-year follow up data in case of chronic use. Before the amendment, the last drug administration was to take place at Week 33, which was extended by another 8 treatment visits from Week 35 to Week 49, followed by a last study visit at Week 51. During the Extension Period, safety, immunogenicity and efficacy data were to be collected continuously. Patients in the switching arms were to receive the treatment they had been randomized to at the study start throughout the extension period. Some patients had already completed and left the study after Week 35 (as per study protocol after Protocol amendment 2), when Amendment 3 became effective. The treatment-free follow-up period after the last injection of study treatment, to wash-out GP2017 or Humira, was removed and the study was to end after the Extension Period for all patients. Patients were able to receive a standard treatment after the end of the study to avoid potential disease exacerbation. The assay to measure the binding of ADAs used in this study, developed to ensure a high drug tolerance, was considered not necessary. Therefore, the last ADA assessment was to be performed two weeks after last study drug administration at Week 51. To provide additional results on very sensitive endpoints and as complement to the primary PASI75 analysis, the relative change from baseline in the continuous PASI score was to be evaluated until Week 16 and compared using powered MMRM analyses and analyses applying an ATE approach. Patients were allowed to interrupt study treatment administration, if they had an AE that in the opinion of the investigator needed to be sufficiently resolved before study treatment could be administered again. To account for stratification factors in the primary analysis, systemic therapy and body weight categories were to be included in the analysis as covariates</p>

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
