Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	01 June 2023
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	20 April 2023
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To select an intramuscular dosing regimen of GSK744 LA plus TMC278 LA based on a comparison of the Week 32 antiviral activity, tolerability, and safety of two IM dosing regimens, relative to GSK744 30 mg plus Abacavir/Lamivudine (ABC/3TC) orally once daily.

Protection of trial subjects:

An IDMC committee will evaluate the efficacy, tolerability, and safety of cabotegravir (CAB) and Rilpivirine (RPV) at the following times: before all eligible subjects have transitioned from the Induction Period to the Maintenance Period; after approximately 45 subjects have reached Week 8 of the Maintenance Period. Futility guidance (e.g., a Bayesian posterior probability approach when 50% of subjects have completed Week 24 of the Maintenance Period) is included to monitor the performance of all treatment arms in order to prevent subjects from continuing on a dosing regimen if existing data indicates that subjects are at unacceptable risk of inadequate maintenance of virologic suppression. A CAB treatment arm should be recommended to stop if there is an indication of any safety signal/effect that would not support continuation of one or more of the CAB treatment groups. This should take into consideration any of the following which are felt to be clinically significant: I. Serious adverse events (e.g. liver event). II. Combinations of non-serious events. III. Treatment-limiting adverse events. IV. Unacceptable number of protocol defined virologic failures with CAB or RPV resistance defined as at least 3 or more virologic failures comprising of $\geq 20\%$ of the treated subjects in an IM treatment arm. V. Mean predose concentrations for the long acting (LA) treatment arm less than 1x protein-adjusted 90% inhibitory concentration (PAIC) 90 (0.166 $\mu\text{g/mL}$) for CAB and less than 12ng/mL for RPV.

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	309
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

The study was conducted across 50 sites in five countries (United States, Canada, France, Germany and Spain). The results presented are based on final analysis, up to approximately Week 468.

Pre-assignment

Screening details:

Study consisted of 28 days Screening Period, 20 weeks Induction Period, 96 weeks Maintenance Period (MP), Extension Period (EP) and 52 weeks Long-Term Follow Up Period (LTFP). A total of 309 participants were enrolled in the study and entered the Induction Period, of which 288 completed and 286 were qualified and randomized into the MP.

Period 1

Period 1 title	Induction Period (20 Weeks)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Arm title	CAB 30 mg+ABC/3TC QD (Induction Period)
-----------	---

Arm description:

In induction period, all participants received an oral regimen of cabotegravir (CAB) 30 milligrams (mg) once daily (QD) plus abacavir/lamivudine (ABC/3TC) 600/300 mg QD for 20 weeks. They also received an oral dose of Rilpivirine (RPV) 25 mg tablet once daily in the last 4 weeks of the Induction Period.

Arm type	Experimental
Investigational medicinal product name	Cabotegravir Oral Tablet
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Cabotegravir (CAB) Oral Tablet was formulated as white to almost white oval shaped film coated 30 mg tablets for oral administration. In IP, participants received CAB 30 mg once daily for 20 weeks

Investigational medicinal product name	Abacavir/Lamivudine Oral Tablet
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Abacavir/Lamivudine (ABC/3TC) was supplied as fixed dose combination (FDC) oral tablet, which contained 600 mg of ABC (as abacavir sulfate) and 300 mg of 3TC. The tablets were orange, film-coated, modified capsule-shaped and debossed with "GS FC2" on one side with no markings on the reverse side. ABC/3TC was packaged in bottles of 30 tablets. In IP, participants received ABC/3TC 600/300 mg once daily for 20 weeks.

Investigational medicinal product name	Rilpivirine Oral Tablet
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Rilpivirine (RPV) Oral Tablet was supplied as a 25 mg tablet that was off-white, round, biconvex, film-coated and debossed on one side with "TMC" and the other side with "25". Participants received RPV 25 mg tablet once daily in last 4 weeks of IP.

Number of subjects in period 1	CAB 30 mg+ABC/3TC QD (Induction Period)
Started	309
Completed	288
Not completed	21
Consent withdrawn by subject	5
Physician decision	1
Adverse event, non-fatal	3
Lost to follow-up	2
Met protocol-defined stopping criteria	3
Lack of efficacy	5
Protocol deviation	2

Period 2

Period 2 title	Maintenance Period (Up to Week 96)
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	CAB LA 600 mg+RPV LA 900 mg IM-Q8W (Maintenance and Extension)

Arm description:

On Day 1 of the Maintenance period, participants who successfully completed the Induction period, were randomized to receive following intramuscular (IM) doses: Day 1 only: CAB long acting (LA) 800 mg (loading dose delivered as two 400 mg IM injections) + RPV LA 900 mg IM; Week 4 only: CAB LA 600 mg IM (second loading dose, no RPV); and from Week 8: CAB LA 600 mg IM +RPV LA 900 mg IM every 8 Weeks (Q8W) for 96 weeks. Eligible participants had the option to continue study participation in the Extension Period.

Arm type	Experimental
Investigational medicinal product name	Rilpivirine Injectable Suspension
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Suspension for injection
Routes of administration	Intramuscular use

Dosage and administration details:

Rilpivirine Injectable Suspension was a sterile white suspension containing 300 mg/mL of TMC278 as free base for administration by intramuscular (IM) injection. The product was packaged in a 2 mL USP Type I glass vial with a 13 mm grey stopper and aluminium seal. Each vial was for single use containing a nominal fill of 2.0 mL, and did not require dilution prior to administration but required refrigeration. Participants randomized to Q8W regimen arm received following intra muscular (IM) doses: RPV LA 900 mg IM every 8 Weeks (Q8W) for 96 weeks

Investigational medicinal product name	Cabotegravir Injectable Suspension
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Suspension for injection
Routes of administration	Intramuscular use

Dosage and administration details:

CAB Injectable Suspension was a sterile white to slightly colored suspension containing 200 mg/mL of CAB as free acid for administration by intramuscular (IM) injection. The product was packaged in a 3 mL United States Pharmacopeia (USP) Type I glass vial with a 13 mm gray stopper and aluminium seal. Each vial was for single use containing a withdrawable volume of 2.0 mL, and did not require dilution prior to administration. Participants randomized to Q8W regimen arm received following intra muscular (IM) doses: Day 1 only - CAB LA 800 mg (loading dose delivered as two 400 mg IM injections). Week 4 only - CAB LA 600 mg IM. Week 8 - CAB LA 600 mg IM every 8 Weeks (Q8W) for 96 weeks.

Arm title	CAB LA 400 mg+RPV LA 600 mg IM-Q4W (Maintenance and Extension)
------------------	--

Arm description:

On Day 1 of the Maintenance period, participants who successfully completed the Induction period, were randomized to receive following IM doses: Day 1 only: CAB LA 800 mg (loading dose delivered as two 400 mg IM injections) + RPV LA 600 mg IM; and from Week 4: CAB LA 400 mg IM + RPV LA 600 mg IM every 4 Weeks (Q4W) for 96 weeks. Eligible participants had the option to continue study participation in the Extension Period.

Arm type	Experimental
Investigational medicinal product name	Rilpivirine Injectable Suspension
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Suspension for injection
Routes of administration	Intramuscular use

Dosage and administration details:

Rilpivirine Injectable Suspension was a sterile white suspension containing 300 mg/mL of TMC278 as free base for administration by intramuscular (IM) injection. The product was packaged in a 2 mL USP Type I glass vial with a 13 mm grey stopper and aluminium seal. Each vial was for single use containing a nominal fill of 2.0 mL, and did not require dilution prior to administration but required refrigeration. Participants randomized to Q4W regimen arm received following IM doses: RPV LA 600 mg IM every 4 weeks (Q4W) for 96 weeks.

Primary: Percentage of participants with plasma Human Immunodeficiency Virus-1 (HIV-1) Ribonucleic Acid (RNA) level below 50 copies/milliliter (c/mL) at Week 32

End point title	Percentage of participants with plasma Human Immunodeficiency Virus-1 (HIV-1) Ribonucleic Acid (RNA) level below 50 copies/milliliter (c/mL) at Week 32
-----------------	---

End point description:

Percentage of participants with HIV-1 RNA<50 c/mL was obtained using Food and Drug Administration (FDA) Snapshot algorithm. The algorithm treated all participants without HIV-1 RNA data at the visit of interest (due to missing data or discontinuation of investigational product prior to the visit window) as well as participants who switch their concomitant antiretroviral therapy (ART) prior to the visit of interest as non-responders. The Intent-to-Treat Maintenance Exposed (ITT-ME) Population consisted of all randomized participants who received at least one injection or one dose of investigational product during the Maintenance Period of the study (on or after Day 1 visit).

Secondary: Percentage of participants with plasma HIV-1 RNA <200 c/mL and <50 c/mL, for oral dose of CAB 30 mg plus ABC/3TC (Induction Period)

End point title	Percentage of participants with plasma HIV-1 RNA <200 c/mL and <50 c/mL, for oral dose of CAB 30 mg plus ABC/3TC (Induction Period)
-----------------	---

End point description:

Percentage of participants with HIV-1 RNA <200 c/mL and <50 c/mL for oral dose of CAB 30 mg plus ABC/3TC during Induction Period was obtained using FDA Snapshot algorithm. The algorithm treated all participants without HIV-1 RNA data at the visit of interest (due to missing data or discontinuation of investigational product prior to the visit window) as well as participants who switch their concomitant ART prior to the visit of interest, as non-responders. The Intent-to-Treat Exposed (ITT-E) Population consisted of all randomized participants who received at least one dose of investigational product.

Secondary: Number of Participants With HIV-1 Disease Progression over Week 32 and Week 96 (Maintenance Period)

End point title	Number of Participants With HIV-1 Disease Progression over Week 32 and Week 96 (Maintenance Period)
-----------------	---

End point description:

HIV-associated conditions were recorded during the study and was assessed according to the Centers for Disease Control and Prevention (CDC) Classification System for HIV Infection in Adults. The clinical categories of HIV infection as per CDC system are class A=Asymptomatic HIV infection or lymphadenopathy or acute HIV infection; class B=symptomatic non-acquired immunodeficiency syndrome (AIDS) conditions and class C=AIDS indicator conditions. Number of participants experiencing disease progression is presented, where disease progression is defined as the progression from Baseline HIV disease status as follows: CDC class A at Baseline to CDC class C event; CDC Class B at Baseline to CDC Class C event; CDC Class C at Baseline to new CDC Class C event; and CDC class A, B or C at Baseline to death.

**Secondary: HIV treatment satisfaction questionnaire - change version (HIVTSQ[c])
Total Score at Week 32 (Maintenance Period)**

End point title	HIV treatment satisfaction questionnaire - change version (HIVTSQ[c]) Total Score at Week 32 (Maintenance Period)
-----------------	---

End point description:

The HIVTSQ(c) was developed to evaluate treatments for HIV and participant satisfaction. It has total 14 items and each items are scored from +3 ('much more satisfied', 'much more convenient', 'much more flexible', etc.) to -3 ('much less satisfied', 'much less convenient', 'much less flexible', etc.). Items 1 to 12 (excluding Items 7b and 9b) are summed to produce a Total Treatment Satisfaction Score (change) with a possible range of -33 to +33. The higher the score, the greater the improvement in satisfaction with treatment; the lower the score, the greater the deterioration in satisfaction with treatment.

**Secondary: Number of participants with HIV Medication Questionnaire (HIVMQ)
Item E and F Scores at Week 32 (Maintenance Period)**

End point title	Number of participants with HIV Medication Questionnaire (HIVMQ) Item E and F Scores at Week 32 (Maintenance Period)
-----------------	--

End point description:

The HIVMQ was developed to assess participant reported medication adherence. It has 6 items (a, b, c, d, e, f). Item E (How often do you find it inconvenient or difficult to take/receive medication as recommended?) and Item F (How much pain/discomfort have experienced with this medication?). Each of these 2 items are scored from 0 (none of the time) to 6 (all of the time). The higher the score, the greater the adherence to medication. Number of participants with HIVMQ Item E and F Scores at Week 32 by their score categories (0: none of the time to 6: all of the time) are presented.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

All-cause mortality, SAEs and non-SAEs were collected from start of the study treatment up to end of Extension and LTFU Periods (up to approximately 468 weeks).

Adverse event reporting additional description:

Safety population included all randomized participants who received at least one dose of study drug, based on the study phase they were included in.

Assessment type	Systematic

Reporting groups

Reporting group title	Long-Term Follow-Up Group
-----------------------	---------------------------

Reporting group description:

This group included participants that were withdrawn from CAB LA+RPV LA IM regimens based on protocol criteria and were required to access Highly Active Antiretroviral Therapy (HAART) of choice. Participants were followed up for approximately 52 weeks.

Reporting group title	CAB 30 mg+ABC/3TC QD (Induction Period)
-----------------------	---

Reporting group description:

In induction period, all participants received an oral regimen of cabotegravir (CAB) 30 milligrams (mg) once daily (QD) plus abacavir/lamivudine (ABC/3TC) 600/300 mg QD for 20 weeks. They also received an oral dose of Rilpivirine (RPV) 25 mg tablet once daily in the last 4 weeks of the Induction Period.

Reporting group title	CAB LA 400 mg+RPV LA 600 mg IM-Q4W (Maintenance and Extension)
-----------------------	--

Reporting group description:

On Day 1 of the Maintenance period, participants who successfully completed the Induction period, were randomized to receive following intramuscular (IM) doses: Day 1 only: CAB long acting (LA) 800 mg (loading dose delivered as two 400 mg IM injections) + RPV LA 900 mg IM; Week 4 only: CAB LA 600 mg IM (second loading dose, no RPV); and from Week 8: CAB LA 600 mg IM +RPV LA 900 mg IM every 8 Weeks (Q8W) for 96 weeks. Eligible participants had the option to continue study participation in the Extension Period.

Reporting group title	Optimized CAB LA 400 mg+RPV LA 600 mg IM-Q4W (Extension)
-----------------------	--

Reporting group description:

Participants who completed 96 weeks of CAB 30 mg + ABC/3TC QD regimen in Maintenance Period transitioned to Extension Period and received an optimized loading dose of CAB LA 400 mg+RPV LA 900 mg IM at Week 100 followed by CAB LA 400 mg+RPV LA 900 mg IM-Q8W in the Extension Phase. Participants were followed up until end of Extension Period.

Reporting group title	CAB 30 mg+ABC/3TC QD (Induction and Maintenance)
-----------------------	--

Reporting group description:

On Day 1 of the Maintenance period, participants who successfully completed the Induction period, were randomized to receive CAB and ABC/3TC QD for 96 weeks. Eligible participants had the option to continue study participation in Extension Period by switching to an optimized IM CAB LA+ RPV LA regimen of their choice (Q8W or Q4W).

Reporting group title	Optimized CAB LA 600 mg+RPV LA 900 mg IM-Q8W (Extension)
-----------------------	--

Reporting group description:

Participants who completed 96 weeks of CAB 30 mg + ABC/3TC QD regimen in Maintenance Period transitioned to Extension Period and received an optimized loading dose of CAB LA 600 mg+RPV LA 900 mg IM at Week 100 and Week 104 followed by CAB LA 600 mg+RPV LA 900 mg IM-Q8W in the Extension Phase. Participants were followed up until end of Extension Period.

Reporting group title	CAB LA 400 mg+RPV LA 600 mg IM-Q4W (Maintenance and Extension)
-----------------------	--

Reporting group description:

On Day 1 of the Maintenance period, participants who successfully completed the Induction period, were

randomized to receive following IM doses: Day 1 only: CAB LA 800 mg (loading dose delivered as two 400 mg IM injections) + RPV LA 600 mg IM; and from Week 4: CAB LA 400 mg IM + RPV LA 600 mg IM every 4 Weeks (Q4W) for 96 weeks. Eligible participants had the option to continue study participation in the Extension Period.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
28 October 2013	Amendment 1: was finalized 28 October 2013, however, was never implemented due to a design change requiring a second amendment. Amendment 1 was prepared to address the following changes: universal changes to naming conventions for the long acting formulation of CAB, simplifying the protocol summary to allow better understanding of the protocol, clarifying the study schematic to increase understanding, clarification the purpose of and analyses to be performed by the Independent Data Monitoring Committee to reflect current plans, clarification of the intent of the Day 1 analysis as a possible analysis if needed, clarification to study treatments including the addition of the ingredients of the long acting formulations of both study treatments, clarification of health outcomes objectives, timings and questionnaires, adding the assessment of exercises habits and intravenous drug use, removing some assessments to simplify study visits, updates and simplification to the time and events tables and additional miscellaneous clarifications.
23 January 2014	Amendment No.02: Primary modifications included, Study design adapted to consolidate the Induction Period into a single 20 Week arm and for the addition of an every 8 week IM regimen into the Maintenance Period. Increased sample size to 265 subjects. Primary endpoint changed from Week 24 to Week 32. Dose rationale updated.
13 June 2014	Amendment No.03: Primary modifications included, ABC/3TC added as Investigational Product beginning at Day 1 of the Maintenance Period; clarification that alternative background therapy (if positive for HLA-B*5701) is not counted as the protocol permitted switch for NRTI; clarification regarding provision of alternative NRTI therapy; change in visit window for subjects on the oral dosing arm; excursion temperatures added for ABC/3TC and RPV oral tablet; text added for ABC/3TC overdose; deleted option for participant informed consent by legal representative; Time and Events Table clarifications. Additional clarifications and typographical corrections throughout.
22 April 2015	Amendment No. 4: Primary modifications included, addition of a 2-hour post dose pharmacokinetic samples and electrocardiogram at Week 32 and Week 48 for subjects receiving intramuscular CAB LA and RPV LA; addition of LAI116482 Week 96 data; addition of maladministration of injection risk; additional clarifications for injection site reaction collection; clarified visit windows.
