

Clinical trial results:

A Randomized, Double-Blind, Placebo-Controlled, Dose-Ranging Study to Evaluate Dupilumab in Patients with Moderate to Severe Uncontrolled Asthma

Summary

EudraCT number	2013-000856-16
Trial protocol	IT ES PL
Global end of trial date	08 April 2015

Results information

Result version number	v1 (current)
This version publication date	20 April 2016
First version publication date	20 April 2016

Trial information

Trial identification

Sponsor protocol code	DRI12544

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	04 May 2015
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	08 April 2015
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To evaluate the efficacy of different doses and regimens of Dupilumab in subjects with moderate-to-severe, uncontrolled asthma.

Protection of trial subjects:

Subjects were fully informed of all pertinent aspects of the clinical trial as well as the possibility to discontinue at any time in language and terms appropriate for the subject and considering the local culture. During the course of the trial, subjects were provided with individual subject cards indicating the nature of the trial the subject is participating, contact details and any information needed in the event of a medical emergency. Collected personal data and human biological samples were processed in compliance with the Sanofi-Aventis Group Personal Data Protection Charter ensuring that the Group abides by the laws governing personal data protection in force in all countries in which it operates.

Background therapy:

Inhaled corticosteroid (ICS)/long-acting beta-2 agonist (LABA) therapy, stable moderate- or high-dose for at least 1 month prior to screening and continued throughout the study.

Evidence for comparator: -

Actual start date of recruitment	10 June 2013
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Poland: 30
Country: Number of subjects enrolled	Spain: 27
Country: Number of subjects enrolled	Italy: 26
Country: Number of subjects enrolled	Argentina: 64
Country: Number of subjects enrolled	Australia: 20
Country: Number of subjects enrolled	Chile: 68
Country: Number of subjects enrolled	France: 29
Country: Number of subjects enrolled	Japan: 80
Country: Number of subjects enrolled	Mexico: 25
Country: Number of subjects enrolled	Russian Federation: 72
Country: Number of subjects enrolled	South Africa: 11
Country: Number of subjects enrolled	Korea, Republic of: 28
Country: Number of subjects enrolled	Turkey: 41
Country: Number of subjects enrolled	Ukraine: 62

Country: Number of subjects enrolled	United States: 193
Worldwide total number of subjects	776
EEA total number of subjects	112

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	702
From 65 to 84 years	73
85 years and over	1

Subject disposition

Recruitment

Recruitment details:

The study was conducted at 174 centers in 15 countries. A total of 1532 subjects were screened between June 2013 and June 2014, of which, 776 subjects were randomized and 769 were treated. 756 subjects were screen failure mainly due to exclusion criteria met and inclusion criteria not met.

Pre-assignment

Screening details:

Randomization was stratified according to blood eosinophils count [high eosinophils(HEos) ≥ 0.3 G/L; eosinophils 0.2 to 0.299 G/L; eosinophils < 0.2 G/L] and country. Assignment to arms was done centrally using Interactive Voice/Web Response System in 1:1:1:1:1 ratio for Placebo and Dupilumab [300 mg q2w; 200 mg q2w; 300 mg q4w and 200 mg q4w].

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Carer

Arms

Are arms mutually exclusive?	Yes
Arm title	Placebo q2w

Arm description:

2 subcutaneous injections of Placebo (for Dupilumab) as a loading dose on Day 1 followed by a single injection every 2 weeks (q2w) from Week 2 to Week 22 in combination with stable ICS/LABA therapy.

Arm type	Placebo
Investigational medicinal product name	Placebo (for Dupilumab)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Subcutaneous injection (2 ml) in the abdomen or upper thigh.

Arm title	Dupilumab 300 mg q2w
------------------	----------------------

Arm description:

2 subcutaneous injections of Dupilumab 300 mg (for a total of 600 mg) as a loading dose on Day 1, followed by a single 300 mg injection q2w from Week 2 to Week 22 in combination with stable ICS/LABA therapy.

Arm type	Experimental
Investigational medicinal product name	Dupilumab
Investigational medicinal product code	SAR231893, REGN668
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Subcutaneous injection (300 mg/2 ml) in the abdomen or upper thigh.

Arm title	Dupilumab 200 mg q2w
------------------	----------------------

Arm description:

2 subcutaneous injections of Dupilumab 200 mg (for a total of 400 mg) as a loading dose on Day 1, followed by a single 200 mg injection q2w from Week 2 to Week 22 in combination with stable ICS/LABA therapy.

Arm type	Experimental
Investigational medicinal product name	Dupilumab
Investigational medicinal product code	SAR231893, REGN668
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Subcutaneous injection (200 mg/2 ml) in the abdomen or upper thigh.

Arm title	Dupilumab 300 mg q4w
------------------	----------------------

Arm description:

2 subcutaneous injections of Dupilumab 300 mg (for a total of 600 mg) as a loading dose on Day 1 followed by a Placebo alternating with single 300 mg injection of Dupilumab q2w from Week 2 to Week 22 in combination with stable ICS/LABA therapy.

Arm type	Experimental
Investigational medicinal product name	Dupilumab
Investigational medicinal product code	SAR231893; REGN668
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Subcutaneous injection (300 mg/2 ml) in the abdomen or upper thigh.

Investigational medicinal product name	Placebo (for Dupilumab)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Subcutaneous injection (2 ml) in the abdomen or upper thigh.

Arm title	Dupilumab 200 mg q4w
------------------	----------------------

Arm description:

2 subcutaneous injections of Dupilumab 200 mg (for a total of 400 mg) as a loading dose on Day 1 followed by a Placebo alternating with single 200 mg injection of Dupilumab q2w from Week 2 to Week 22 in combination with stable ICS/LABA therapy.

Arm type	Experimental
Investigational medicinal product name	Dupilumab
Investigational medicinal product code	SAR231893; REGN668
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Subcutaneous injection (200 mg/ 2 ml) in the abdomen or upper thigh.

Investigational medicinal product name	Placebo (for Dupilumab)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Subcutaneous injection (2 ml) in the abdomen or upper thigh.

Statistical analyses

Statistical analysis title	Dupilumab 300 mg q2w vs Placebo q2w
Statistical analysis description:	
Analysis was performed using mixed-effect model with repeated measures (MMRM) model including available FEV1 data from baseline to Week 12 and treatment group as a factor. A step-down procedure was used to strongly control the overall type I error rate for testing multiple doses against placebo. The hierarchy was 300 mg q2w, 200 mg q2w, 300 mg q4w and 200 mg q4w.

Secondary: Annualized Event Rate of Loss of Asthma Control (LOAC) During The Treatment Period

End point title	Annualized Event Rate of Loss of Asthma Control (LOAC) During The Treatment Period
-----------------	--

End point description:

LOAC was defined as any of following: ≥ 6 additional reliever puffs of salbutamol/albuterol or levosalbutamol/levalbuterol in a 24-hour period (compared to baseline) on 2 consecutive days; increase in inhaled corticosteroid ≥ 4 times the dose at randomization; use of systemic corticosteroids for ≥ 3 days; hospitalization or emergency room visit because of asthma, requiring systemic corticosteroids. Annualized event rate was the total number of LOAC that occurred during the treatment period divided by the total number of subject-years treated. Analysis was performed on ITT population and HEos-ITT population. Number of subjects analyzed=subjects of the ITT population who were treated. Here 'n' signifies number of subjects with available data for specified category.

Secondary: Time to First LOAC Event During the Treatment Period: Kaplan-Meier Estimates at Week 12 and Week 24

End point title	Time to First LOAC Event During the Treatment Period: Kaplan-Meier Estimates at Week 12 and Week 24
-----------------	---

End point description:

The time-to-event variable was defined as the time from the date of first dose to the date of the first LOAC event. For subjects who had no LOAC event on or before last dose date + 14 days, it was censored at the date of last dose date + 14 days. The probability of LOAC at Week 12 and Week 24 was provided. Analysis was performed on ITT population and HEos-ITT population. Number of subjects analyzed=subjects of the ITT population who were treated. Here 'n' signifies number of subjects with available data for specified category.

Secondary: Annualized Event Rate of Severe Exacerbation During The Treatment Period

End point title	Annualized Event Rate of Severe Exacerbation During The Treatment Period
-----------------	--

End point description:

A severe exacerbation was defined as a deterioration of asthma requiring: use of systemic corticosteroids for ≥ 3 days; or hospitalization or emergency room visit because of asthma, requiring systemic corticosteroids. Annualized event rate was the total number of exacerbations that occurred during the treatment period divided by the total number of subject-years treated. Analysis was performed on ITT population and HEos-ITT population. Number of subjects analyzed=subjects of the ITT population who were treated. Here 'n' signifies number of subjects with available data for specified category.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

All Adverse Events (AE) were collected from signature of the informed consent form up to the final visit (Week 40) regardless of seriousness or relationship to investigational product.

Adverse event reporting additional description:

Reported AEs and deaths were treatment emergent AEs developed/worsened & deaths occurred during 'treatment-emergent period'(from first dose of study drug injection up to end of 16-week post-treatment period).

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
08 November 2013	Following changes were made: Increase in the total expected number of subjects from 600 to 750 subjects to have 300 subjects with HEos due to lower rate for HEos subjects than expected; reliever medication collection data was changed to specify the criterion for qualifying an asthma exacerbation event based on nebulizer use using the nebulizer-to-puff conversion factor for application to LOAC definition; permitted concomitant medications were changed to provide more information on the potential effect of dupilumab on cytochrome P450 (CYP450) and a list of CYP450 substrates with narrow therapeutic window and dose adjustment following the initiation and stopping of dupilumab; exclusion criteria was changed to minimize the impact on the primary endpoint, additional exclusion criteria were implemented for oral corticosteroids and methylxanthines prior to the screening period: pregnancy and breast-feeding were also added; dosing schedule was changed to provide additional instructions on the investigational medicinal product (IMP) administration related to administration of loading dose and q2w injections; prohibited concomitant medication was changed to correct information for lipoxygenase inhibitor examples.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
