Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	30 November 2017
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	30 November 2017
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective of this trial is to evaluate whether the objective tumor response of the combination therapy with pimasertib plus SAR245409 is superior to that of pimasertib plus SAR245409 placebo in subjects with previously treated unresectable low grade ovarian carcinoma according to Response Evaluation Criteria in Solid Tumors Version 1.1 (RECIST v1.1) as determined by the Investigator.

Protection of trial subjects:

Subject protection was ensured by following high medical and ethical standards in accordance with the principles laid down in the Declaration of Helsinki, and that are consistent with Good Clinical Practice and applicable regulations.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	30 September 2013
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Australia: 8
Country: Number of subjects enrolled	Belgium: 7
Country: Number of subjects enrolled	Canada: 11
Country: Number of subjects enrolled	France: 1
Country: Number of subjects enrolled	Poland: 6
Country: Number of subjects enrolled	Spain: 5
Country: Number of subjects enrolled	United States: 27
Worldwide total number of subjects	65
EEA total number of subjects	19

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0

Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	53
From 65 to 84 years	12
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

First/last subject (informed consent): Sep 2013/Oct 2014. Clinical data cut off: Jan 2018.

Pre-assignment

Screening details:

Total 75 subjects were screened for this trial. Out of those subjects, 65 subjects were randomized to treatment in this trial.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Investigator, Carer, Assessor, Subject

Arms

Are arms mutually exclusive?	Yes
Arm title	Pimasertib (Once Daily) Plus SAR245409

Arm description:

Subjects received Pimasertib oral capsule at a dose of 60 milligram (mg) once daily along with SAR245409 oral capsule at a dose of 70 mg once daily and placebo matched to pimasertib in evening until disease progression, death, intolerable toxicity or withdrawal of informed consent, whichever came first.

Arm type	Experimental
Investigational medicinal product name	Pimasertib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Pimasertib oral capsule at a dose of 60 milligram (mg) administered once daily until disease progression, death, intolerable toxicity or withdrawal of informed consent, whichever came first.

Investigational medicinal product name	SAR245409
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

SAR245409 oral capsule at a dose of 70 mg administered once daily until disease progression, death, intolerable toxicity or withdrawal of informed consent, whichever came first.

Investigational medicinal product name	Placebo matched pimasertib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Placebo matched pimasertib oral capsule at a dose of 60 mg administered once daily in evening until disease progression, death, intolerable toxicity or withdrawal of informed consent, whichever came first.

Arm title	Pimasertib (Twice Daily) Plus SAR245409 Placebo
------------------	---

Arm description:

Subjects received pimasertib oral capsule at a dose of 60 mg twice daily along with placebo matched to

SAR245409 once daily in morning until disease progression, death, intolerable toxicity or withdrawal of informed consent, whichever came first.

Arm type	Experimental
Investigational medicinal product name	Pimasertib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Pimasertib oral capsule at a dose of 60 mg administered twice daily until disease progression, death, intolerable toxicity or withdrawal of informed consent, whichever came first.

Primary: Objective Tumor Response

End point title	Objective Tumor Response ^[1]
End point description: Objective tumor response was defined as the presence of at least one Complete Response (CR): Disappearance of all target lesions. Any pathological lymph nodes (whether target or non-target) must have reduction in short axis to more than (<) 10 millimeter (mm). Partial Response (PR): At least a 30% decrease in the sum of diameters of target lesions, taking as reference the baseline sum diameters. Intent-to Treat (ITT) analysis set included all subjects who had been randomized.	
End point type	Primary
End point timeframe: From randomization until disease progression or death assessed every 8 weeks up to week 32, and thereafter every 12 weeks up to 52 months	
Notes: [1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point. Justification: Only descriptive statistics were reported.	

End point values	Pimasertib (Once Daily) Plus SAR245409	Pimasertib (Twice Daily) Plus SAR245409 Placebo		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	32	33		
Units: percentage of subjects				
number (confidence interval 95%)	12.5 (3.5 to 29.0)	12.1 (3.4 to 28.2)		

Statistical analyses

Secondary: Progression-Free Survival

End point title	Progression-Free Survival
-----------------	---------------------------

End point description:

PFS: time from randomization to first documentation of objective tumor progression. CR: Disappearance of all target lesions. Any pathological lymph nodes (whether target or non-target) must have reduction in short axis to <10 mm. PR: At least 30% decrease in sum of diameters of target lesions, taking as reference baseline sum diameters. PD: At least a 20% increase in sum of diameters of target lesions, taking as reference smallest sum on study. In addition to relative increase of 20%, the sum also demonstrate absolute increase of at least 5 mm. SD: Neither sufficient shrinkage to qualify for PR nor sufficient increase to qualify for PD, taking as reference smallest sum diameters while on study. Median PFS was computed using Kaplan-Meier estimates (product-limit estimates) and was presented with 95% confidence interval. ITT analysis set used. Here 99999=upper limit of 95% Confidence Interval for PFS could not be calculated because this upper limit was not reached due to limited number of events.

Secondary: Health Related Quality of Life (HrQoL) assessed using European Organization for Research and Treatment of Cancer Quality of Life Questionnaire C30 (EORTC QLQ-C30)

End point title	Health Related Quality of Life (HrQoL) assessed using European Organization for Research and Treatment of Cancer Quality of Life Questionnaire C30 (EORTC QLQ-C30)
End point description: EORTC QLQ-C30: 30-item questionnaire comprising of five functional scales(physical, role, cognitive,	

emotional, and social), 3 symptom scales (fatigue, pain, and nausea/vomiting), 6 single items (dyspnea, insomnia, appetite loss, constipation, diarrhea, and financial impact) and a global quality of life (QoL) scale summarized from two 7-point scales (overall QoL and overall general health). Each of multi-item scales includes a different set of items-no item occurs in more than one scale. All of the scales and individual single-items ranged in score from 0 to 100. A high scale score=higher response level. High score for a functional scale=high/healthy level of functioning, a high score for the global health status/QoL=high QoL, but a high score for a symptom scale/item=high level of symptomatology/problems. Data was not collected for this endpoint because as per Protocol Amendment 4 (13 March 2015), collection of patient-reported health-related quality of life outcomes was discontinued.

End point type	Secondary

Secondary: Health Related Quality of Life (HrQoL) Assessed Using European Organization for Research and Treatment of Cancer (EORTC) Ovarian-Specific Module Quality of Life Questionnaire Ovarian Cancer Module (QLQ-OV28)

End point title	Health Related Quality of Life (HrQoL) Assessed Using European Organization for Research and Treatment of Cancer (EORTC) Ovarian-Specific Module Quality of Life Questionnaire Ovarian Cancer Module (QLQ-OV28)
-----------------	---

End point description:

EORTC QLQ-OV28 assesses disease and treatment-related symptoms of ovarian cancer. The 28-item module comprises of 6 symptom scales (abdominal/gastrointestinal symptoms, peripheral neuropathy, other chemotherapy side-effects, hormonal symptoms, body image, attitude to disease and treatment), and sexual functioning. All of the scales and the individual single-items ranged in score from 0 to 100. Higher scores indicate a better quality of life. Data was not collected for this outcome because as per Protocol Amendment 4 (dated 13 March 2015), the collection of patient-reported health-related quality of life outcomes was discontinued.

Secondary: Number of Subjects with Treatment Emergent Adverse Events (TEAEs), Serious TEAEs, TEAEs Leading to Discontinuation of Treatment and Death

End point title	Number of Subjects with Treatment Emergent Adverse Events (TEAEs), Serious TEAEs, TEAEs Leading to Discontinuation of Treatment and Death
-----------------	---

End point description:

TEAEs, Serious TEAEs and AEs were assessed according to the National Cancer Institute Common Terminology Criteria for Adverse Events (NCI-CTCAE) Version 4.0. An adverse event was any untoward medical occurrence in a subject who received study drug without regard to possibility of causal relationship. A Serious Adverse Event was an AE resulting in any of the following outcomes or deemed significant for any other reason: death; initial or prolonged inpatient hospitalization; life-threatening experience (immediate risk of dying); persistent or significant disability/incapacity; congenital anomaly. Treatment-emergent are events between first dose of study drug and up to data cut-off that were absent before treatment or that worsened relative to pretreatment state. Safety population (SAF) analysis set included all subjects who received at least one dose of any trial treatment.

End point type	Secondary

Adverse events

Adverse events information

Timeframe for reporting adverse events:

First dose of study drug up to 52 months

Adverse event reporting additional description:

SAF for "Pimasertib (Once Daily) Plus SAR245409" = 32 subjects and "Pimasertib (Twice Daily) Plus SAR245409 Placebo" = 32 subjects. Adverse events analysis was based on the SAF which includes 64 subjects. One subject was randomized by error and not treated therefore adverse event analysis was not performed.

Assessment type	Non-systematic

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
24 October 2013	1- Included "Benefits and Risks Assessment" section. 2- Extended the period for using an adequate method of contraception after discontinuation of trial medication. 3- Extended the reporting period of adverse events for female subjects.
03 July 2014	The purpose of this amendment was to make the following updates: 1- Amend the inclusion and exclusion criteria. 2- Extend the period for using an adequate method of contraception after discontinuation of trial treatment. 3- Clarify the creatine phosphokinase (CPK) criterion for withdrawal of the trial treatment. 4- Amend the guidance for the monitoring and recording of AEs. 5- Introduce further guidance on trial treatment modifications and amend the management of specific trial treatment related AEs. 6- Clarify the assessment of pharmacogenetics (PGx) and biomarkers and to specify informed consent procedures for the collection of PGx samples. 7- Add an administrative interim analysis. 8- Clarify instructions for the collection of tumor tissue samples and initial stratification based on histology. 9- Specify that the corrected QT interval will be calculated using Fredericia's formula. 10- Clarify the list of prohibited medicines.
14 November 2014	The purpose of this amendment was to make the following updates: 1- Include a newly planned futility analysis, including the scope of analysis and related parameters such as number of subjects included in the futility analysis and impact on power of primary analysis. 2- Introduce the temporary enrollment stop between at least 50 subjects being enrolled and the conclusions derived from the outcome of the futility analysis. 3- Update the end of trial definition.
13 March 2015	The purpose of this amendment was to make the following updates: 1- Update the overall trial design to allow subjects to continue treatment, however, for subjects who had a placebo component for their treatment assignment, placebo was to be withdrawn after approval of this amendment. 2- Modify the planned trial period (first enrollment-last subject out). 3- Modify the primary and secondary endpoint analyses. 4- Modify collection of subject data and endpoint analysis. 5- Provide information to the Investigator on awareness of dehydration and renal failure secondary to gastrointestinal toxicity.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
