

Clinical trial results:

A double-blind, randomized, placebo-controlled, cross-over study to evaluate the clinical efficacy and safety of subcutaneous administration of human plasma-derived C1-esterase inhibitor in the prophylactic treatment of hereditary angioedema

Summary

EudraCT number	2013-000916-10
Trial protocol	GB HU IT ES CZ
Global end of trial date	12 October 2015

Results information

Result version number	v1 (current)
This version publication date	17 November 2016
First version publication date	17 November 2016

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	04 December 2015
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	12 October 2015
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To demonstrate the clinical efficacy of subcutaneous (SC) CSL830 in the prophylactic treatment of hereditary angioedema (HAE). To compare the clinical efficacy of 2 doses of SC CSL830.

Protection of trial subjects:

This study was carried out in accordance with the International Conference on Harmonisation Good Clinical Practice guidelines, standard operating procedures for clinical research and development at CSL Behring and any other relevant procedures and applicable international and national regulatory requirements. The study protocol and all amendments were approved by the Independent Ethics Committee / Institutional Review Board of the participating centers. Before undergoing Screening procedures for possible enrollment into the study, the subjects' legally acceptable representative was informed, in an understandable form, about the nature, scope, and possible consequences of the study. The investigator was responsible for obtaining a subject's legally acceptable representative written informed consent to participate in the study. The investigator could cease study treatment and withdraw the subject, or the subject could withdraw himself from participation in the study at any time. If a subject was withdrawn from the study or further participation was declined, the subject would continue to have access to medical care and would be treated according to routine medical practice, but would no longer receive the investigational medicinal product.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	18 December 2013
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Australia: 1
Country: Number of subjects enrolled	Canada: 8
Country: Number of subjects enrolled	Israel: 9
Country: Number of subjects enrolled	Romania: 1
Country: Number of subjects enrolled	United States: 54
Country: Number of subjects enrolled	Spain: 4
Country: Number of subjects enrolled	United Kingdom: 3
Country: Number of subjects enrolled	Czech Republic: 1
Country: Number of subjects enrolled	Hungary: 4
Country: Number of subjects enrolled	Italy: 5
Worldwide total number of subjects	90
EEA total number of subjects	18

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	7
Adults (18-64 years)	76
From 65 to 84 years	7
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

115 subjects were screened and 90 were randomized/enrolled

Period 1

Period 1 title	Period 1
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Investigator, Carer, Assessor, Subject

Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

Arm title	Placebo high/CSL830 (40)
------------------	--------------------------

Arm description:

In Period 1, a high-volume dose of placebo will be administered subcutaneously twice a week for up to 16 weeks, then in Period 2, a low-volume dose of C1-esterase inhibitor will be administered subcutaneously twice a week for up to 16 weeks.

Arm type	Experimental
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder and solvent for solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

A high-volume dose of placebo will be administered subcutaneously twice a week for up to 16 weeks

Arm title	CSL830 (40)/placebo high
------------------	--------------------------

Arm description:

In Period 1, a low-volume dose of C1-esterase inhibitor will be administered subcutaneously twice a week for up to 16 weeks, then in Period 2, a high-volume dose of placebo will be administered subcutaneously twice a week for up to 16 weeks.

Arm type	Experimental
Investigational medicinal product name	CSL830
Investigational medicinal product code	CSL830
Other name	
Pharmaceutical forms	Powder and solution for solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

A low-volume dose of C1-esterase inhibitor (40 IU/kg) will be administered subcutaneously twice a week for up to 16 weeks

Arm title	Placebo low/CSL830 (60)
------------------	-------------------------

Arm description:

In Period 1, a low-volume dose of placebo will be administered subcutaneously twice a week for up to 16 weeks, then in Period 2, a high-volume dose of C1-esterase inhibitor will be administered subcutaneously twice a week for up to 16 weeks.

-----------------	--

End point description:

The percentage of subjects experiencing solicited local AEs (discomfort [eg, pain, burning], swelling, bruising, or itching at the investigational product injection site) during treatment with CSL830 and placebo.

End point type	Secondary
----------------	-----------

End point timeframe:

During the treatment phase, up to 32 weeks

End point values	CSL830 (40) - Safety	CSL830 (60) - Safety	Placebo high - Safety	Placebo low - Safety
Subject group type	Subject analysis set	Subject analysis set	Subject analysis set	Subject analysis set
Number of subjects analysed	43	43	44	42
Units: Percent of subjects				
number (not applicable)	27.9	34.9	22.7	26.2

Statistical analyses

No statistical analyses for this end point

Secondary: Investigational product injections resulting in solicited local AEs (Injection site reactions)

End point title	Investigational product injections resulting in solicited local AEs (Injection site reactions)
End point description: The rate/injection of injections of C1-esterase inhibitor or placebo that were followed by solicited local AEs (discomfort [eg, pain, burning], swelling, bruising, or itching at the investigational product injection site) during treatment with CSL830 and placebo. Rate/Injection = Number of events/number of injections.	
End point type	Secondary
End point timeframe: During the treatment phase, up to 32 weeks	

End point values	CSL830 (40) - Safety	CSL830 (60) - Safety	Placebo high - Safety	Placebo low - Safety
Subject group type	Subject analysis set	Subject analysis set	Subject analysis set	Subject analysis set
Number of subjects analysed	43 ^[7]	43 ^[8]	44 ^[9]	42 ^[10]
Units: injection site reactions/injection				
number (not applicable)	0.21	0.08	0.12	0.05

Notes:

[7] - 1307 total number of injections within treatment

[8] - 1320 total number of injections within treatment

[9] - 1290 total number of injections within treatment

[10] - 1164 total number of injections within treatment

Statistical analyses

No statistical analyses for this end point

Adverse events

Adverse events information

Timeframe for reporting adverse events:

During the treatment phase, up to 32 weeks.

Adverse event reporting additional description:

The Safety Population consisted of all subjects who provided informed consent / assent, were randomized, and received at least 1 dose (or partial dose) of investigational product.

Assessment type	Systematic

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
20 February 2014	<p>The study design has been revised so that subjects are not required to discontinue use of their medication for hereditary angioedema (HAE) prophylaxis at entry into the Run-in Period.</p> <p>The inclusion criteria have been revised to permit the inclusion of subjects who have used a stable regimen of oral medication for prophylaxis against HAE attacks (ie, androgens, tranexamic acid, progestins) within 3 months of the Screening Visit and who do not plan to change that regimen during the study.</p> <p>The exclusion criteria have been revised to exclude:</p> <ul style="list-style-type: none">a. Subjects with body weight < 40 kilogramsb. Subjects who have used intravenous C1-esterase inhibitor (C1-INH) for routine prophylaxis against HAE attacks (ie, administered every 3 or 4 days) within 3 months of the Screening Visit or who plan to use intravenous C1-INH for routine prophylaxis against HAE attacks during the study.c. Subjects who are unable to have their HAE adequately managed pharmacologically with on demand treatment, administered either independently or with assistance. <p>Secondary safety and tolerability endpoints have been added.</p> <p>The planned statistical analyses have been revised:</p> <ul style="list-style-type: none">a. New sub-group analyses have been included.b. A description of missing data handling has been added.c. The lower bound of the 95% confidence interval for the responder rate of the combined active treatment group has been added. The lower bound is 33%.d. Additional details have been included to support statistical analyses. <p>The list of permitted on-study medications has been revised to allow the use of medications (eg, intravenous C1-INH) for the pre-procedure prevention of acute HAE attacks during the study.</p>
11 December 2014	<p>The protocol has undergone administrative revisions to more clearly convey the joint intent of the Steering Committee, the Data Safety Monitoring Board, and CSL Behring regarding study conduct as pertains to the stopping, restarting, and termination rules.</p>

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
