#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	30 January 2017
Is this the analysis of the primary completion data?	Yes
Primary completion date	30 January 2017
Global end of trial reached?	Yes
Global end of trial date	21 February 2017
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

This is a global, multicenter, randomized, double-blind, placebo-controlled, parallel group study using avatrombopag to treat adults with thrombocytopenia associated with liver disease. The study will evaluate avatrombopag in the treatment of thrombocytopenia associated with liver disease prior to an elective procedure to reduce the need for platelet transfusions or any rescue procedure for bleeding due to procedural and post-procedural bleeding complications. Participants will be enrolled into 2 cohorts according to mean baseline platelet count and, within each baseline platelet count cohort will be further stratified by risk of bleeding associated with the elective procedure (low, moderate, or high) and hepatocellular carcinoma (HCC) status (Yes or No).

Protection of trial subjects:

This study was conducted in accordance with standard operating procedures (SOPs) of the sponsor (or designee), which are designed to ensure adherence to Good Clinical Practice (GCP) guidelines as required by the following:

- Principles of the World Medical Association Declaration of Helsinki (World Medical Association, 2008)
- International Council on Harmonisation (ICH) E6 Guideline for GCP (CPMP/ICH/135/95) of the European Agency for the Evaluation of Medicinal Products, Committee for Proprietary Medicinal Products, International Council for Harmonisation of Technical Requirements for Registration of Pharmaceuticals for Human Use
- Title 21 of the United States (US) Code of Federal Regulations (US 21 CFR) regarding clinical studies, including Part 50 and Part 56 concerning informed subject consent and Institutional Review Board (IRB) regulations and applicable sections of US 21 CFR Part 312
- European Good Clinical Practice Directive 2005/28/EC and Clinical Trial Directive 2001/20/EC for studies conducted within any European Union (EU) country. All suspected unexpected serious adverse reactions were reported, as required, to the Competent Authorities of all involved EU member states.
- Article 14, Paragraph 3, and Article 80-2 of the Pharmaceutical Affairs Law (Law No. 145, 1960) for studies conducted in Japan, in addition to Japan's GCP Subject Information and Informed Consent.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	08 November 2013
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Spain: 4
Country: Number of subjects enrolled	Belgium: 5
Country: Number of subjects enrolled	Czech Republic: 6
Country: Number of subjects enrolled	France: 7
Country: Number of subjects enrolled	Germany: 4
Country: Number of subjects enrolled	Italy: 12

Country: Number of subjects enrolled	Argentina: 3
Country: Number of subjects enrolled	Australia: 4
Country: Number of subjects enrolled	Brazil: 3
Country: Number of subjects enrolled	China: 3
Country: Number of subjects enrolled	Israel: 22
Country: Number of subjects enrolled	Japan: 50
Country: Number of subjects enrolled	Mexico: 17
Country: Number of subjects enrolled	Romania: 13
Country: Number of subjects enrolled	Russian Federation: 9
Country: Number of subjects enrolled	United States: 42
Worldwide total number of subjects	204
EEA total number of subjects	51

Notes:

<b>Subjects enrolled per age group</b>	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	141
From 65 to 84 years	48
85 years and over	15

## Subject disposition

### Recruitment

Recruitment details: -

### Pre-assignment

Screening details:

A total of 346 participants signed informed consent. Of these 346 participants, 142 were screen failures and 204 were randomized into the study. Of the 142 screen failures, 119 did not meet inclusion/exclusion criteria and 13 withdrew consent, 3 experienced an adverse event, 1 was lost to follow-up and 6 had other not specified reasons.

### Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Carer

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	60 mg Placebo (lower baseline platelet count)

Arm description:

Participants with a baseline platelet count of less than  $40 \times 10^9$ /liter (L) took three 20 milligrams (mg) matching placebo tablets orally, once daily with a meal on Days 1 through 5.

Arm type	Placebo
Investigational medicinal product name	60 mg Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Participants took three 20 mg matching placebo tablets orally, once daily with a meal on Days 1 through 5.

<b>Arm title</b>	60 mg Avatrombopag (lower baseline platelet count)
------------------	--

Arm description:

Participants with a baseline platelet count of less than  $40 \times 10^9$ /L took three 20 mg tablets (60 mg total) avatrombopag (2nd generation) orally, once daily with a meal on Days 1 through 5.

Arm type	Experimental
Investigational medicinal product name	60 mg Avatrombopag
Investigational medicinal product code	E5501
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Participants took three 20 mg tablets (60 mg total) avatrombopag (2nd generation) orally, once daily with a meal on Days 1 through 5.

<b>Arm title</b>	40 mg Placebo (higher baseline platelet count)
------------------	--

Arm description:

Participants with a baseline platelet count of greater than or equal to 40 to  $50 \times 10^9$ /L took two 20 mg matching placebo tablets orally, once daily with a meal on Days 1 through 5.

Arm type	Placebo
----------	---------

Investigational medicinal product name	40 mg Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Participants took two 20 mg matching placebo tablets orally, once daily with a meal on Days 1 through 5.

<b>Arm title</b>	40 mg Avatrombopag (higher baseline platelet count)
------------------	---

Arm description:

Participants with a baseline platelet count of greater than or equal to 40 to 50x10<sup>9</sup>/L took two 20 mg tablets (40 mg total) avatrombopag (2nd generation) orally, once daily with a meal on Days 1 through 5.

Arm type	Experimental
Investigational medicinal product name	40 mg Avatrombopag
Investigational medicinal product code	E5501
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Participants too two 20 mg tablets (40 mg total) avatrombopag (2nd generation) orally, once daily with a meal on Days 1 through 5.

<b>Number of subjects in period 1</b>	60 mg Placebo (lower baseline platelet count)	60 mg Avatrombopag (lower baseline platelet count)	40 mg Placebo (higher baseline platelet count)
Started	43	70	33
Completed	37	68	31
Not completed	6	2	2
Consent withdrawn by subject	3	-	-
Adverse event, non-fatal	-	-	1
Unspecified	-	1	-
Lost to follow-up	3	-	1
Subject choice	-	1	-

<b>Number of subjects in period 1</b>	40 mg Avatrombopag (higher baseline platelet count)
Started	58
Completed	55
Not completed	3
Consent withdrawn by subject	1
Adverse event, non-fatal	-
Unspecified	-
Lost to follow-up	1
Subject choice	1

## Baseline characteristics

### Reporting groups

Reporting group title	60 mg Placebo (lower baseline platelet count)
Reporting group description:	
Participants with a baseline platelet count of less than $40 \times 10^9/\text{liter}$ (L) took three 20 milligrams (mg) matching placebo tablets orally, once daily with a meal on Days 1 through 5.	
Reporting group title	60 mg Avatrombopag (lower baseline platelet count)
Reporting group description:	
Participants with a baseline platelet count of less than $40 \times 10^9/\text{L}$ took three 20 mg tablets (60 mg total) avatrombopag (2nd generation) orally, once daily with a meal on Days 1 through 5.	
Reporting group title	40 mg Placebo (higher baseline platelet count)
Reporting group description:	
Participants with a baseline platelet count of greater than or equal to 40 to $50 \times 10^9/\text{L}$ took two 20 mg matching placebo tablets orally, once daily with a meal on Days 1 through 5.	
Reporting group title	40 mg Avatrombopag (higher baseline platelet count)
Reporting group description:	
Participants with a baseline platelet count of greater than or equal to 40 to $50 \times 10^9/\text{L}$ took two 20 mg tablets (40 mg total) avatrombopag (2nd generation) orally, once daily with a meal on Days 1 through 5.

## End points

### End points reporting groups

Reporting group title	60 mg Placebo (lower baseline platelet count)
Reporting group description: Participants with a baseline platelet count of less than $40 \times 10^9/\text{L}$ took three 20 milligrams (mg) matching placebo tablets orally, once daily with a meal on Days 1 through 5.	
Reporting group title	60 mg Avatrombopag (lower baseline platelet count)
Reporting group description: Participants with a baseline platelet count of less than $40 \times 10^9/\text{L}$ took three 20 mg tablets (60 mg total) avatrombopag (2nd generation) orally, once daily with a meal on Days 1 through 5.	
Reporting group title	40 mg Placebo (higher baseline platelet count)
Reporting group description: Participants with a baseline platelet count of greater than or equal to 40 to $50 \times 10^9/\text{L}$ took two 20 mg matching placebo tablets orally, once daily with a meal on Days 1 through 5.	
Reporting group title	40 mg Avatrombopag (higher baseline platelet count)
Reporting group description: Participants with a baseline platelet count of greater than or equal to 40 to $50 \times 10^9/\text{L}$ took two 20 mg tablets (40 mg total) avatrombopag (2nd generation) orally, once daily with a meal on Days 1 through 5.	

### Primary: Percentage of Participants Who Did Not Require a Platelet Transfusion After Randomization and up to 7 Days Following a Scheduled Procedure

End point title	Percentage of Participants Who Did Not Require a Platelet Transfusion After Randomization and up to 7 Days Following a Scheduled Procedure
End point description: Responders were defined as participants who did not require a platelet transfusion or any rescue procedure for bleeding after randomization and up to 7 days following a scheduled procedure. Participants with missing information due to early withdrawal or other reasons were conservatively considered as having received a transfusion in the analysis, (i.e. a Non-responder). The Full Analysis Set (FAS) was analyzed.	
End point type	Primary
End point timeframe: Randomization (Visit 2), up to 7 Days following a scheduled procedure	

End point values	60 mg Placebo (lower baseline platelet count)	60 mg Avatrombopag (lower baseline platelet count)	40 mg Placebo (higher baseline platelet count)	40 mg Avatrombopag (higher baseline platelet count)
Subject group type	Reporting group	Reporting group	Reporting group	Reporting group
Number of subjects analysed	43	70	33	58
Units: Percentage of participants				
number (confidence interval 95%)	34.9 (20.6 to 49.1)	68.6 (57.7 to 79.4)	33.3 (17.2 to 49.4)	87.9 (79.5 to 96.3)

## Statistical analyses

<b>Statistical analysis title</b>	60 mg Placebo versus 60 mg Avatrombopag
Statistical analysis description: The null hypothesis was that the proportion of participants not requiring a platelet transfusion or any rescue procedure for bleeding after randomization and up to 7 days following a scheduled procedure was the same between the 60 mg avatrombopag and matched placebo treatment groups.	
Comparison groups	60 mg Placebo (lower baseline platelet count) v 60 mg Avatrombopag (lower baseline platelet count)
Number of subjects included in analysis	113
Analysis specification	Pre-specified
Analysis type	superiority <sup>[1]</sup>
P-value	= 0.0006 <sup>[2]</sup>
Method	Cochran-Mantel-Haenszel
Parameter estimate	Difference of proportion versus placebo
Point estimate	33.7
Confidence interval	
level	95 %
sides	2-sided
lower limit	15.8
upper limit	51.6

Notes:

[1] - Difference of proportion vs placebo = proportion of Responders for avatrombopag - proportion of Responders for placebo; 95% confidence interval (CI) is calculated based on normal approximation.

[2] - Stratified by the risk of bleeding associated with the scheduled procedure within each Baseline platelet count cohort.

<b>Statistical analysis title</b>	40 mg Placebo versus 40 mg Avatrombopag
Statistical analysis description: The null hypothesis was that the proportion of participants not requiring a platelet transfusion or any rescue procedure for bleeding after randomization and up to 7 days following a scheduled procedure was the same between the 60 mg avatrombopag and matched placebo treatment groups.	
Comparison groups	40 mg Placebo (higher baseline platelet count) v 40 mg Avatrombopag (higher baseline platelet count)
Number of subjects included in analysis	91
Analysis specification	Pre-specified
Analysis type	superiority <sup>[3]</sup>

number (not applicable)	0.0	1.4	6.1	1.7

### Statistical analyses

No statistical analyses for this end point

### Other pre-specified: Number of Participants Experiencing an Adverse Event

End point title	Number of Participants Experiencing an Adverse Event
-----------------	--

End point description:

Safety assessments consisted of monitoring and recording all adverse events (AEs) and serious adverse events, including platelet transfusion-related complications; routine laboratory evaluation for hematology, serum chemistry, and urine values; periodic measurement of vital signs and electrocardiograms (ECGs); the performance of physical examinations; and Doppler sonography. AE severity was graded using Common Terminology Criteria for Adverse Events (CTCAE) version 4.0, where Grade 1 = mild, Grade 2 = moderate, Grade 3 = Severe, Grade 4 = Life-threatening, and Grade 5 = Death related to the AE. All AEs graded as 4 or 5 were considered to be serious. Treatment-emergent adverse events (TEAEs) were defined as an AE that started on or after the date of first dose of study drug, up to 30 days after the last dose of study drug. Treatment-related AEs were considered by the investigator to be possibly or probably related to study drug.

End point type	Other pre-specified
----------------	---------------------

End point timeframe:

From date of first dose of study drug up to 30 days after the last dose of study drug, up to approximately 3 years and 2 months

Treatment-related TEAEs	9	6	2	4
Serious TEAEs	1	1	1	1
TEAEs leading to study drug dose adjustment	0	0	0	0

TEAEs leading to study drug withdrawal	0	0	0	0
TEAEs leading to study drug dose reduction	0	0	0	0
TEAEs leading to study drug dose interruption	0	0	0	0

## Statistical analyses

---

No statistical analyses for this end point

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

From date of first dose of study drug up to 30 days after the last dose of study drug, up to approximately 3 years and 2 months

Adverse event reporting additional description:

Treatment-emergent adverse events and treatment-emergent serious adverse events. Adverse events were graded using Common Terminology Criteria for Adverse Events (CTCAE) version 4. Safety analysis set included the group of participants who received at least 1 dose of study drug and had at least 1 post dose safety assessment.

Assessment type	Systematic

### Reporting groups

Reporting group title	60 mg Placebo (lower baseline platelet count)
-----------------------	---

Reporting group description:

Participants with a baseline platelet count of less than  $40 \times 10^9/L$  took three 20 mg matching placebo tablets orally, once daily with a meal on Days 1 through 5.

Reporting group title	60 mg Avatrombopag (lower baseline platelet count)
-----------------------	--

Reporting group description:

Participants with a baseline platelet count of less than  $40 \times 10^9/L$  took three 20 mg tablets (60 mg total) avatrombopag (2nd generation) orally, once daily with a meal on Days 1 through 5.

Reporting group title	40 mg Placebo (higher baseline platelet count)
-----------------------	--

Reporting group description:

Participants with a baseline platelet count of greater than or equal to 40 to  $50 \times 10^9/L$  took two 20 mg matching placebo tablets orally, once daily with a meal on Days 1 through 5.

Reporting group title	40 mg Avatrombopag (higher baseline platelet count)
-----------------------	---

Reporting group description:

Participants with a baseline platelet count of greater than or equal to 40 to  $50 \times 10^9/L$  took two 20 mg tablets (40 mg total) avatrombopag (2nd generation) orally, once daily with a meal on Days 1 through 5.

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
12 November 2013	<ul style="list-style-type: none"><li>• Addition of tranexamic acid as a rescue procedure for bleeding as requested by the European Union (EU) regulatory agency.</li></ul>
22 June 2015	<ul style="list-style-type: none"><li>• Updates to the bleeding risk category classification and revision to the exclusion criteria based on feedback received from the investigators.</li><li>• Addition of eltrombopag and romiplostim as prohibited medications due to their potential off-label use for participants who have thrombocytopenia with Chronic Liver Disease (CLD).</li><li>• Addition of an evaluation for platelet aggregation to be measured at selected sites due to a request from Japan's Pharmaceuticals and Medical Devices Agency.</li></ul>
31 May 2016	<ul style="list-style-type: none"><li>• Clarification to Inclusion Criterion #3: the word "change" was replaced with the word "increase" as requested by the Food and Drug Administration (FDA).</li></ul>
02 December 2016	<ul style="list-style-type: none"><li>• The third secondary endpoint, the proportion of participants with a World Health Organization (WHO) bleeding score <math>\geq 2</math> after randomization and up to 7 days following a scheduled procedure, was changed to an exploratory endpoint.</li><li>• This amendment also reduced the sample size from 300 to 200 participants.</li></ul>

Notes:

---

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

None reported
