Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	21 November 2017
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	21 November 2017
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The main objective of this 3-part study was to evaluate the effect of 24 weeks of evolocumab (AMG 145) administered subcutaneously (SC) every month (QM), compared with ezetimibe (part B), on percent change from baseline in low-density lipoprotein cholesterol (LDL-C) in hypercholesterolemic participants who were unable to tolerate an effective dose of a statin due to muscle-related side effects (MRSE) (part B), as confirmed by a lead-in, double-blind, placebo-controlled, crossover statin rechallenge (part A).

Protection of trial subjects:

This study was conducted in accordance with International Conference on Harmonisation (ICH) Good Clinical Practice (GCP) regulations and guidelines, and Food and Drug Administration (FDA) regulations and guidelines set forth in 21 Code of Federal Regulations parts 11, 50, 54, 56, and 312. All participants provided written informed consent before undergoing any study-related procedures, including screening procedures. The study protocol, amendments, and the informed consent form (ICF) were reviewed by the Institutional Review Boards (IRBs) and Independent Ethics Committees (IECs). No participants were recruited into the study and no investigational product (IP) was shipped until the IRB/IEC gave written approval of the protocol and ICF and Amgen received copies of these approvals.

Country: Number of subjects enrolled	Norway: 5
Country: Number of subjects enrolled	United Kingdom: 10
Country: Number of subjects enrolled	Canada: 13
Country: Number of subjects enrolled	United States: 62

Worldwide total number of subjects	218
EEA total number of subjects	121

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	144
From 65 to 84 years	74
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

A total of 511 participants were enrolled in the 3-part study at 53 centers (parts A and B) and 48 centers (part C) in the United States of America, Europe, Australia, New Zealand, Canada, and South Africa from December 2013 to November 2017. Results are reported for participants enrolled in part B and part C.

Pre-assignment

Screening details:

492 participants were randomized into part A. 199 of 202 participants that completed part A, along with additional 19 new participants, were randomized 2:1 (stratified by screening LDL-C level) to receive evolocumab or ezetimibe in 24-week, double-blind part B. A total of 209 participants from part B enrolled in 2-year, open-label extension part C.

Period 1

Period 1 title	Study part B
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Carer

Blinding implementation details:

Participants received either evolocumab SC or placebo SC and either ezetimibe orally (PO) or matching placebo PO. Participants disposition accounting for SC IP in part B are reported.

Arms

Are arms mutually exclusive?	Yes
Arm title	Ezetimibe in part B

Arm description:

Participants received ezetimibe 10 milligram (mg) PO once a day (QD) and placebo matching to evolocumab SC injection QM for 24 weeks.

Arm type	Active comparator
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection in pre-filled pen
Routes of administration	Subcutaneous use

Dosage and administration details:

Participants received placebo matching to evolocumab SC injection QM for 24 weeks.

Investigational medicinal product name	Ezetimibe
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Participants received ezetimibe 10 mg tablet PO QD for 24 weeks.

Arm title	Evolocumab in part B
Arm description:	
Participants received evolocumab 420 mg SC injection QM and placebo matching to ezetimibe PO QD for 24 weeks.	
Arm type	Experimental

Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Participants received placebo matching to ezetimibe PO QD for 24 weeks.

Investigational medicinal product name	Evolocumab
Investigational medicinal product code	AMG 145
Other name	
Pharmaceutical forms	Solution for injection in pre-filled pen
Routes of administration	Subcutaneous use

Dosage and administration details:

Participants received evolocumab 420 mg SC injection QM for 24 weeks.

Number of subjects in period 1	Ezetimibe in part B	Evolocumab in part B
Started	73	145
Participants who received SC IP	73	145
Completed	69	138
Not completed	4	7
Consent withdrawn by subject	3	-
Physician decision	-	1
Adverse event, non-fatal	1	5
Lost to follow-up	-	1

Period 2

Period 2 title	Study part C
Is this the baseline period?	No
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Ezetimibe in part B and Evolocumab in part C

Arm description:

Participants who completed SC IP in part B were eligible and 2 participants who did not complete IP in part B were enrolled in part C and were allowed to choose quarterly during scheduled study center visits between evolocumab 420 mg SC QM or evolocumab 140 mg SC every 2 weeks (Q2W) for up to 104 weeks.

Arm type	Experimental
----------	--------------

Investigational medicinal product name	Evolocumab
Investigational medicinal product code	AMG 145
Other name	
Pharmaceutical forms	Solution for injection in pre-filled pen
Routes of administration	Subcutaneous use

Dosage and administration details:

Participants were allowed to choose quarterly during scheduled study center visits between evolocumab 420 mg SC QM or evolocumab 140 mg SC Q2W for up to 104 weeks.

Arm title	Evolocumab in part B and part C
------------------	---------------------------------

Arm description:

Participants who completed SC IP in part B were eligible and 2 participants who did not complete IP in part B were enrolled in part C and were allowed to choose quarterly during scheduled study center visits between evolocumab 420 mg SC QM or evolocumab 140 mg SC Q2W for up to 104 weeks.

Arm type	Experimental
Investigational medicinal product name	Evolocumab
Investigational medicinal product code	AMG 145
Other name	
Pharmaceutical forms	Solution for injection in pre-filled pen
Routes of administration	Subcutaneous use

Dosage and administration details:

Participants were allowed to choose quarterly during scheduled study center visits between evolocumab 420 mg SC QM or evolocumab 140 mg SC Q2W for up to 104 weeks.

Number of subjects in period 2	Ezetimibe in part B and Evolocumab in part C	Evolocumab in part B and part C
Started	69	138
Participants who received Evolocumab	70	139
Completed	65	133
Not completed	5	6
Adverse event, serious fatal	-	1
Consent withdrawn by subject	4	3
Lost to follow-up	1	2

End point description:

An adverse event (AE) is defined as any untoward medical occurrence or worsening of a pre-existing medical condition in a participant. A serious AE is defined as an AE that meets at least 1 of following serious criteria: fatal, life threatening (immediate risk of death), requires in-patient hospitalization or prolongation of existing hospitalization, results in persistent or significant disability/incapacity, congenital anomaly/birth defect and other medically important serious event. AEs that occurred after IP administration in part C until 30 days after end of IP or EOS were considered treatment emergent in part C. Adverse device effect included AEs resulting from insufficient or inadequate instructions for use, or any malfunction of device, or use error or from intentional misuse of device. The long-term analysis set (LAS) population included all participants enrolled in part C of study who received at least 1 dose of open-label IP and was used in all analyses for part C of study.

End point type	Other pre-specified
----------------	---------------------

End point timeframe:

From the first dose of IP in part C until 30 days after the end of IP or end of study (EOS), whichever was earlier (up to 104 weeks)

End point values	Ezetimibe in part B and Evolocumab in part C	Evolocumab in part B and part C		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	70 ^[49]	139 ^[50]		
Units: Participants				
TEAEs	55	111		
TESAEs	14	36		
Device related TEAEs	1	1		
TEAEs leading to discontinuation of IP	3	4		
Fatal AE	0	1		

Notes:

[49] - One participant enrolled in to this group of part C without completing IP during part B.

[50] - One participant enrolled in to this group of part C without completing IP during part B.

Statistical analyses

No statistical analyses for this end point

Other pre-specified: Number of Participants who Experienced the Maximum Toxicity Grade [Common Terminology Criteria for Adverse Events (CTCAE) Grade \geq 3] Shift From Baseline in the Clinical Laboratory Parameters During Part C

End point title	Number of Participants who Experienced the Maximum Toxicity Grade [Common Terminology Criteria for Adverse Events (CTCAE) Grade \geq 3] Shift From Baseline in the Clinical Laboratory Parameters During Part C
-----------------	---

End point description:

Blood and urine samples for determination of clinical chemistry, haematology and urinalysis parameters were taken every 3 months and at the EOS or safety follow-up visit during part C of the study. The results were based on the shift of laboratory parameters from study baseline grade 0 to 2 to postbaseline grade 3 to 4 during part C. All baseline values were collected at the start of the study, ie, baseline values from the start of part A for participants who entered part A, and from the start of part B for participants who bypassed part A. Laboratory shift values for specific analytes were provided using the CTCAE version 4.03 toxicity criteria. The LAS population included all participants enrolled in part C of the study who received at least 1 dose of open-label IP and was used in all analyses for part C of the study. AST = aspartate aminotransferase and INR = international normalized ratio.

End point type	Other pre-specified

No statistical analyses for this end point

Adverse events

Adverse events information

Timeframe for reporting adverse events:

From the first dose of IP in part B until the EOS visit in part C or early termination from the study, up to 128 weeks

Adverse event reporting additional description:

The FAS population and LAS population were analyzed for AEs in part B and part C of study, respectively.

MedDRA dictionary version 18.1 was used for part B and 20.1 for part C.

Assessment type	Systematic
-----------------	------------

Dictionary used

Dictionary name	MedDRA
-----------------	--------

Dictionary version	18.1 20.1

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
27 September 2013	The main purpose of this amendment was to add Vitamin E reflex testing to part C of the protocol in cases where LDL-C is < 25 mg/dL. To clarify language for laboratory testing on Day 1 of part B in participants who complete part A. As prior version was incorrect with respect to participants who go directly to part B due to 10x upper limit of normal (ULN) creatine kinase (CK). Add the potential to use the automated mini-doser in part C of the study. Remove duplicate exclusion criteria regarding malignancy. Remove Statin Intolerance Questionnaire as it is redundant with the Short Form (36) Health Survey (SF-36). Make the Brief Pain Inventory (BPI) mandatory in part A. Add the BPI and the SF-36 to part B and add corresponding exploratory analysis and statistical language. Clarify language on MRSE that in the opinion of the investigator lead to discontinuation of IP. Update statin inclusion criteria per FDA comment.
15 January 2014	The main purpose of this amendment was to clarify that participants must bypass part A and be randomized directly into part B if they have a documented history of CK elevation > 10 x ULN accompanied by muscle symptoms while on statin therapy and documented resolution of both CK elevation and muscle symptoms upon discontinuation of statin therapy. Update duration of part A to approximately 24 weeks. Modify inclusion criterion to specify that participants with fasting LDL-C ≥ 160 mg/dL (4.14 millimoles per liter) without diagnosed coronary heart disease or risk equivalent should have 1 or more risk factors. To clarify text to reflect that participants must discontinue statins and ezetimibe for ≥ 4 weeks before LDL-C screening. To Modify timing of non-protocol testing of specific analytes to at least 12 weeks after participant's last blinded IP administration. Add Hepatitis C virus viral load testing for participants positive for Hepatitis C virus on Day 1 (part B). Remove Hemoglobin A1c from exploratory endpoints.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

The efficacy and safety evaluations were presented only for part B and C of 3-part study. The AE data was not included for part A as this was designed to confirm presence of statin-related MRSE and ensure that only these participants entered part B.
