Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	23 May 2017
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	23 May 2017
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The objectives of this study were to evaluate the long-term safety and efficacy of elagolix for the management of moderate to severe endometriosis-associated pain in subjects administered elagolix for up to 12 months (initial 6 months if on active treatment in pivotal Study M12-671 and an additional 6 months in this extension study).

Protection of trial subjects:

All subjects entering the study had to sign an informed consent that was explained to them and questions encouraged.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	27 May 2014
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Argentina: 3
Country: Number of subjects enrolled	Australia: 11
Country: Number of subjects enrolled	Austria: 2
Country: Number of subjects enrolled	Brazil: 16
Country: Number of subjects enrolled	Czech Republic: 41
Country: Number of subjects enrolled	Hungary: 20
Country: Number of subjects enrolled	Italy: 33
Country: Number of subjects enrolled	New Zealand: 15
Country: Number of subjects enrolled	Poland: 105
Country: Number of subjects enrolled	South Africa: 9
Country: Number of subjects enrolled	Spain: 7
Country: Number of subjects enrolled	United Kingdom: 8
Country: Number of subjects enrolled	United States: 225
Worldwide total number of subjects	495
EEA total number of subjects	216

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	495
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Participants who completed the 6-month Treatment Period in the pivotal Study M12-671 (NCT01931670) could enter this extension study.

The study was conducted at 148 sites in North and South America, Europe, Australia/New Zealand, and South Africa.

One patient was enrolled but did not receive study drug and is not included in the results.

Pre-assignment

Screening details:

The study consisted of a 6-month Treatment Period and a Post-treatment Follow-up (PTFU) of up to 12 months. Participants who received elagolix in the pivotal study continued to receive the same dose for a further 6 months; participants on placebo in the pivotal study were randomized 1:1 to either elagolix 150 mg once daily or 200 mg twice daily.

Period 1

Period 1 title	Treatment Period (6 Months) (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
Arm title	Placebo/Elagolix 150 mg QD

Arm description:

Participants who received placebo in pivotal Study M12-671 and were randomized to elagolix 150 mg once daily (QD) for 6 months in this extension Study M12-821.

Arm type	Experimental
Investigational medicinal product name	Elagolix
Investigational medicinal product code	ABT-620
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Elagolix tablets administered orally

Arm title	Placebo/Elagolix 200 mg BID
------------------	-----------------------------

Arm description:

Participants who received placebo in pivotal Study M12-671 and were randomized to elagolix 200 mg twice a day (BID) for 6 months in this extension Study M12-821.

Arm type	Experimental
Investigational medicinal product name	Elagolix
Investigational medicinal product code	ABT-620
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Elagolix tablets administered orally

Arm title	Elagolix/Elagolix 150 mg QD
------------------	-----------------------------

Arm description:

Participants were randomized to elagolix 150 mg QD in pivotal Study M12-671 and continued to receive elagolix 150 mg QD for 6 months in this extension Study M12-821.

Arm type	Experimental
Investigational medicinal product name	Elagolix
Investigational medicinal product code	ABT-620
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Elagolix tablets administered orally

Arm title	Elagolix/Elagolix 200 mg BID
------------------	------------------------------

Arm description:

Participants were randomized to elagolix 200 mg BID in pivotal Study M12-671 and continued to receive elagolix 200 mg BID for 6 months in this extension Study M12-821.

Arm type	Experimental
Investigational medicinal product name	Elagolix
Investigational medicinal product code	ABT-620
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Elagolix tablets administered orally

Primary: Percentage of Participants With a Response for Dysmenorrhea at Month 6 Based on Daily Assessment

End point title	Percentage of Participants With a Response for Dysmenorrhea at Month 6 Based on Daily Assessment ^[1]
End point description: Response was defined as a reduction of -0.85 or more from baseline in dysmenorrhea (pain during menstruation) as well as no increase in rescue analgesic use for endometriosis-associated pain (defined as a < 15% increase in average rescue analgesic pill count and no additional analgesic). The response threshold represents a clinically meaningful response that was determined in pivotal Study M12-671. Participants recorded rescue analgesic use for endometriosis-associated pain daily and dysmenorrhea and its impact on daily activities each day of their period in an electronic diary (e-Diary). Dysmenorrhea was assessed according to the following: <ul style="list-style-type: none">• 0: No discomfort• 1: Mild discomfort but I was easily able to do the things I usually do• 2: Moderate discomfort or pain that made it difficult to do some of the things I usually do• 3: Severe pain that made it difficult to do the things I usually do. Analgesic use and pain scores were averaged over the 35 days prior to each visit.	
End point type	Primary
End point timeframe: Baseline (defined as baseline of Study M12-671 for participants who received elagolix in the pivotal study and baseline of the extension study M12-821 for participants who received placebo in the pivotal study) and Month 6	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Statistical comparisons between dose groups were not prespecified and not performed since the extension studies were not designed or powered for these analyses.

Primary: Percentage of Participants With a Response for Non-menstrual Pelvic Pain at Month 6 Based on Daily Assessment

End point title	Percentage of Participants With a Response for Non-menstrual Pelvic Pain at Month 6 Based on Daily Assessment ^[6]
-----------------	--

End point description:

Response was defined as a reduction of -0.43 or greater from baseline for non-menstrual pelvic pain as well as no increase in rescue analgesic use for endometriosis-associated pain (defined as a $< 15\%$ increase in average pill count of rescue analgesics and no additional analgesics). The response threshold represents a clinically meaningful response that was determined in pivotal Study M12-671.

Participants recorded rescue analgesic medication for endometriosis-associated pain and assessed non-menstrual pelvic pain and its impact on their daily activities each day in an e-Diary according to the following response options:

- 0: No discomfort
- 1: Mild discomfort but I was easily able to do the things I usually do
- 2: Moderate discomfort or pain that made it difficult to do some of the things I usually do
- 3: Severe pain that made it difficult to do the things I usually do.

Pain scores and analgesic use were averaged over the 35 days prior to each visit.

Secondary: Percent Change From Baseline in Dysmenorrhea Based on Daily Assessment

End point title	Percent Change From Baseline in Dysmenorrhea Based on Daily Assessment
-----------------	--

End point description:

Participants assessed dysmenorrhea (pain during menstruation) and its impact on their daily activities each day of their period in an e-Diary according to the following response options:

- 0: No discomfort
- 1: Mild discomfort but I was easily able to do the things I usually do
- 2: Moderate discomfort or pain that made it difficult to do some of the things I usually do
- 3: Severe pain that made it difficult to do the things I usually do.

Pain scores were averaged over the 35 days prior to each visit.

Secondary: Change From Baseline in Endometriosis Health Profile-30 (EHP-30) Pain Dimension

End point title	Change From Baseline in Endometriosis Health Profile-30 (EHP-30) Pain Dimension
End point description: The EHP-30 is an instrument to measure health-related quality of life in women with endometriosis. The EHP-30 consists of two parts: a core questionnaire containing 5 scales that are applicable to all women with endometriosis and includes pain, control and powerlessness, emotional well-being, social support, and self-image, and a modular part containing 6 scales which do not necessarily apply to all women with endometriosis. Each question in the core questionnaire is scored on the following scale: 0 = Never, 1 = Rarely, 2 = Sometimes, 3 = Often, 4 = Always. The pain dimension consists of 11 questions. The dimension score ranges from 0 to 100, where 0 = best possible health status as measured by the questionnaire; 100 = worst possible health status. A negative change from baseline score indicates improvement in quality of life.	
End point type	Secondary
End point timeframe: Baseline (defined as baseline of Study M12-671 for participants who received elagolix in the pivotal study and baseline of the extension study M12-821 for participants who received placebo in the pivotal study) and months 1, 3, and 6

Secondary: Change From Baseline in Health-Related Productivity Questionnaire (HRPQ): Hours of Work Lost in Workplace and Household

End point title	Change From Baseline in Health-Related Productivity Questionnaire (HRPQ): Hours of Work Lost in Workplace and Household
-----------------	---

End point description:

The HRPQ consists of 9 questions measuring the impact of endometriosis-associated pain and its treatment on work productivity and daily activities in the home.

Absenteeism: Number of hours of intended work lost due to illness or treatment. Presenteeism: Number of hours of work where output was impacted by illness or treatments.

Total hours lost is the sum of hours missed due to absenteeism plus presenteeism.

End point type	Secondary

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
26 September 2014	<p>The purpose of this amendment was to:</p> <ul style="list-style-type: none">• Update the Treatment Period to add: "Prophylactic use of rescue analgesics (i.e., on a standing basis or for prevention of pain) for endometriosis-associated pain is not permitted during the study (from Day 1 of the Treatment Period through Month 6 of the Post-treatment Follow-up Period)." Subjects were allowed the use of permitted analgesic rescue therapy on an as needed basis.• Update Selection of Study Population to split the combined Exclusion Criterion 6 into 2 separate criteria to clarify malignancy Criterion 6 and neuropsychiatric Criterion 7.• Update Prohibited Therapy to remove prescription amphetamine, or amphetamine-like drugs, and to add cannabinoids inclusive of any marijuana use, as prohibited medications.• Update Permitted Rescue Therapy to remove Tramadol 50 mg.• Update Efficacy, Pharmacokinetic, Pharmacodynamic and Safety Assessments as follows:<ul style="list-style-type: none">- Efficacy and Safety Measurements Assessed to provide clarifications and incorporate applicable changes within the body text of the protocol.- Increase the visit window from 4 to 5 days.- Update Medical/Social History to add a collection of documentation of drug abuse (licit or illicit) at Day 1.- Update Pap Test to add biopsy with colposcopy, and to clarify that both colposcopy and biopsy results should be discussed with the sponsor.- Update Study Procedures with a footnote to clarify 8-hour minimum fast for Clinical/Safety Laboratory Tests.- Update Clinical Laboratory Tests, to change "Any repeat testing must be approved" to "Any repeat testing should be approved by an AbbVie representative."- Update BMD to allow scans be performed within 5 days of scheduled visit• Update Adverse Event Reporting to include a 24-hour hotline for the investigator to contact AbbVie on-call physician in emergency.• Update Pregnancy to add "any" to clarify that outcome of any pregnancy should be collected• Update Statistical Methods to clarify methods.

24 September 2015	<p>The purpose of this amendment was to:</p> <ul style="list-style-type: none"> • Remove fasting requirement on study drug administration • Add requirement on use of calcium and vitamin D daily during the PTFU Period. • Clarify that a brief physical examination is conducted only if there are reported symptoms. • Instruct on use of the same modality consistently to measure body temperature. • Clarify that subjects with a Pap diagnosis of atypical squamous cells of undetermined significance (ASC-US) with high risk human papillomavirus (HPV) or low-grade squamous intraepithelial lesion (LSIL) should undergo additional evaluation with colposcopy and biopsy, if applicable per local guidelines. • Clarify that pregnancy testing applies to all subjects, whether exempted from use of a dual barrier non-hormonal contraception or not, and request that subjects attest on use of allowable contraception methods at every visit. • Add requirement for DXA Scan at Month 6 in the PTFU Period for all subjects. • Change the capacity of the collection tubes and the amount of serum collected from 4 mL to 3 mL. • Add change from baseline in ECG to the safety variables. • Clarify that temperature must be recorded each business day to document proper temperature of clinical supplies. • Clarify that changes in BMD may be considered an AE if resulting in discontinuation from the study. • Instruct sites to complete an SAE on the non-CRF forms and provide guidance when access to RAVE® is unavailable. • Add specifics on time windows for analyses, referencing the SAP. • Replace "nominal day" with "reference study day," and clarify window calculation for Month 1. • Clarify that sensitivity analyses are done for the proportion of DYS and NMPP responders at Month 6. • Remove the statement on "Subjects who discontinue for other reasons will be categorized according to LOCF." • Add that information on responders will be based on the ROC thresholds calculated in Study M12-671. • Specify which variable will be analyzed at EOT.
