Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	16 February 2015
Is this the analysis of the primary completion data?	Yes
Primary completion date	19 February 2014
Global end of trial reached?	Yes
Global end of trial date	19 February 2014
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

Randomized, single-blind trial to compare 2 doses of remimazolam against each other and against propofol during induction of general anesthesia and to compare remimazolam with the combination of propofol and sevoflurane during maintenance of general anesthesia. Main objectives: efficacy including dose finding for induction, safety

Protection of trial subjects:

This study was conducted in compliance with the principles of the Declaration of Helsinki and its amendments, the International Conference on Harmonisation (ICH), principles of Good Clinical Practice (GCP), and the applicable regulations in Germany and the European Union.

Conduct of the study was approved by the Ethics Committee at the Medical Faculty of the University of Leipzig, an appropriately constituted Independent Ethics Committee.

Background therapy:

- Major elective cardiac surgery, i.e. surgery assumed to require more than 2 hours of maintenance of general anesthesia and the use of extracorporeal circulation.
- Fentanyl and remifentanyl as opioid narcotics and rocuronium bromide as neuro-muscular blocker
- Optionally: further drugs that are used during heart surgery, e.g. catecholamines, heparin

Evidence for comparator:

Remimazolam was compared with the standard regimen for general anesthesia in heart surgery which is the combination of propofol and sevoflurane.

Actual start date of recruitment	29 August 2013
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Germany: 90
Worldwide total number of subjects	90
EEA total number of subjects	90

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23	0

months)	
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	49
From 65 to 84 years	41
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

The study was conducted at the Heart Center in Leipzig, Germany. Patients were eligible for the study if they were scheduled for major elective cardiac surgery, i.e. surgery assumed to require >2 hours of maintenance of general anesthesia and extracorporeal circulation, including bypass(es), valve replacement(s), and surgery of the aortic arch.

Pre-assignment

Screening details:

A total of 125 patients were screened. 10 patients were not eligible so that 115 patients were randomized. Of these 115 patients, 25 patients stopped the study prior to the start of the study medication, mainly due to rescheduling of the surgery or other organisational reasons. Study medication was administered to 90 patients.

Period 1

Period 1 title	Baseline
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Single blind
Roles blinded	Subject

Arms

Are arms mutually exclusive?	No
Arm title	Remimazolam 6

Arm description:

Remimazolam 6 mg/kg/hr for induction, remimazolam 1 - 3 mg/kg/hr for maintenance, remimazolam down titration and stop during recovery.

Arm type	Experimental
Investigational medicinal product name	Remimazolam
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for solution for injection/infusion
Routes of administration	Intravenous use

Dosage and administration details:

Remimazolam 6 mg/kg/hr for induction, 1 - 3 mg/kg/hr for maintenance, remimazolam down titration and stop during recovery based on the medical condition of each individual patient. Intravenous administration via syringe pump.

Arm title	Remimazolam 12
------------------	----------------

Arm description:

Remimazolam 12 mg/kg/hr for induction, remimazolam 1 - 3 mg/kg/hr for maintenance, remimazolam down titration and stop during recovery.

Arm type	Experimental
Investigational medicinal product name	Remimazolam
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for solution for injection/infusion
Routes of administration	Intravenous use

Dosage and administration details:

Remimazolam 12 mg/kg/hr for induction, 1 - 3 mg/kg/hr for maintenance, remimazolam down titration and stop during recovery based on the medical condition of each individual patient. Intravenous administration via syringe pump.

Arm title	Remimazolam All
------------------	-----------------

Arm description:
Remimazolam 6 mg/kg/hr or 12 mg/kg/hr for induction, remimazolam 1 - 3 mg/kg/hr for maintenance, remimazolam down titration and stop during recovery.

Arm type	Experimental
Investigational medicinal product name	Remimazolam 6
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for solution for injection/infusion
Routes of administration	Intravenous use

Dosage and administration details:

Remimazolam 6 mg/kg/hr for induction, remimazolam 1 - 3 mg/kg/hr for maintenance, remimazolam down titration and stop during recovery based on the medical condition of each individual patient. intravenous administration via syringe pump.

Investigational medicinal product name	Remimazolam 12
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for solution for injection/infusion
Routes of administration	Intravenous use

Dosage and administration details:

Remimazolam 12 mg/kg/hr for induction, remimazolam 1 - 3 mg/kg/hr for maintenance, remimazolam down titration and stop during recovery based on the medical condition of each individual patient. Intravenous administration via syringe pump.

Arm title	Propofol/Sevoflurane
------------------	----------------------

Arm description:

Propofol 2 - 2.5 mg/kg for induction, maintenance with sevoflurane 0.8 - 2.5 MAC until start of extracorporeal circulation, afterwards maintenance with propofol 3 - 12 mg/kg/hr, propofol down titration and stop during recovery.

Arm type	Active comparator
Investigational medicinal product name	Propofol
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Emulsion for injection/infusion
Routes of administration	Intravenous use

Dosage and administration details:

Propofol for induction: 2.0 - 2.5 mg/kg, manual intravenous administration over approximately 1 minute. Propofol for maintenance: 3 - 12 mg/kg/hr, intravenous administration via syringe pump. Propofol down titration and stop during recovery based on the medical condition of each individual patient, intravenous administration via syringe pump.

Investigational medicinal product name	Sevoflurane
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Inhalation vapour, solution
Routes of administration	Intrapulmonary use

Dosage and administration details:

Sevoflurane inhalation gas 0.8 -2.5 MAC for maintenance. Administration by inhalation during mechanical ventilation.

Number of subjects in period 1	Remimazolam 6	Remimazolam 12	Remimazolam All
Started	34	28	62
Completed	34	28	62

Number of subjects in period 1	Propofol/Sevoflurane
Started	28
Completed	28

Period 2

Period 2 title	Induction
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Single blind ^[1]
Roles blinded	Subject, Assessor

Blinding implementation details:

Patients were not informed about their treatment allocation. To enable investigators to titrate remimazolam or propofol as effectively and as safely as possible during the induction period, investigators knew about their patients' treatment allocation. An expert assessor who reviewed the Narcotrend data after the end of the general anesthesia was not informed about the patients' treatment allocation.

Arms

Are arms mutually exclusive?	Yes
Arm title	Remimazolam 6

Arm description:

Remimazolam 6 mg/kg/hr for induction

Arm type	Experimental
Investigational medicinal product name	Remimazolam
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for solution for injection/infusion
Routes of administration	Intravenous use

Dosage and administration details:

6 mg/kg/hr for induction, intravenous administration via syringe pump.

Arm title	Remimazolam 12
------------------	----------------

Arm description:

Remimazolam 12 mg/kg/hr for induction

Arm type	Experimental
Investigational medicinal product name	Remimazolam
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for solution for injection/infusion
Routes of administration	Intravenous use

Dosage and administration details:

12 mg/kg/hr for induction, intravenous administration via syringe pump.

Arm title	Propofol
Arm description: Propofol 2.0 - 2.5 mg/kg for induction	
Arm type	Active comparator
Investigational medicinal product name	Propofol
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Emulsion for injection/infusion
Routes of administration	Intravenous use

Dosage and administration details:

Propofol 2.0 - 2.5 mg/kg for induction. Manual intravenous administration over approximately 1 minute.

Notes:

[1] - The number of roles blinded appears inconsistent with a single blinded trial. It is expected that there will be one role blinded in a single blind trial.

Justification: An expert assessor who reviewed the Narcotrend data after the end of the general anesthesia was not informed about the patients' treatment allocation.

Number of subjects in period 2	Remimazolam 6	Remimazolam 12	Propofol
Started	34	28	28
Completed	34	28	28

Period 3

Period 3 title	Maintenance
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Single blind ^[2]
Roles blinded	Subject, Assessor

Blinding implementation details:

Patients were not informed about their treatment allocation. To enable investigators to titrate remimazolam or propofol/sevoflurane as effectively and as safely as possible during the maintenance period, investigators knew about their patients' treatment allocation. An expert assessor who reviewed the Narcotrend data after the end of the general anesthesia was not informed about the patients' treatment allocation.

Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

Arm title	Remimazolam All
Arm description: Maintenance with remimazolam after induction with remimazolam 6 mg/kg/hr or remimazolam 12 mg/kg/hr	
Arm type	Experimental
Investigational medicinal product name	Remimazolam
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for solution for injection/infusion
Routes of administration	Intravenous use

Dosage and administration details:

Remimazolam 1 mg/kg/hr up to 3 mg/kg/hr intravenously administered via syringe pump according to each individual patient's needs.

Arm title	Propofol/Sevoflurane
Arm description: Maintenance with sevoflurane until start of extracorporeal circulation. From start of extracorporeal circulation onwards maintenance with propofol.	
Arm type	Active comparator
Investigational medicinal product name	Propofol
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Emulsion for injection/infusion
Routes of administration	Intravenous use

Dosage and administration details:

Propofol 3 - 12 mg/kg/hr according to each individual patient's needs. Intravenous administration via syringe pump.

Investigational medicinal product name	Sevoflurane
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Inhalation vapour, solution
Routes of administration	Intrapulmonary use

Dosage and administration details:

Sevoflurane inhalation gas 0.8 -2.5 MAC according to each individual patient's needs. Administration by inhalation during mechanical ventilation.

Notes:

[2] - The number of roles blinded appears inconsistent with a single blinded trial. It is expected that there will be one role blinded in a single blind trial.

Justification: An expert assessor who reviewed the Narcotrend data after the end of the general anesthesia was not informed about the patients' treatment allocation.

Number of subjects in period 3	Remimazolam All	Propofol/Sevoflurane
Started	62	28
Completed	62	28

Period 4

Period 4 title	Recovery
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Single blind ^[3]
Roles blinded	Subject, Assessor

Blinding implementation details:

Patients were not informed about their treatment allocation. To enable investigators to titrate remimazolam or propofol as effectively and as safely as possible during the recovery period, investigators knew about their patients' treatment allocation. An expert assessor who reviewed the Narcotrend data after the end of the general anesthesia was not informed about the patients' treatment allocation.

Arms

Are arms mutually exclusive?	Yes
Arm title	Remimazolam All

Arm description:

Down titration and stop of remimazolam

Arm type	Experimental
Investigational medicinal product name	Remimazolam
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for solution for injection/infusion
Routes of administration	Intravenous use

Dosage and administration details:

Downtitration of remimazolam from maintenance dosage according to each individual patient's needs. Intravenous administration via syringe pump.

Arm title	Propofol
------------------	----------

Arm description:

Down titration and stop of propofol

Arm type	Active comparator
Investigational medicinal product name	Propofol
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Emulsion for injection/infusion
Routes of administration	Intravenous use

Dosage and administration details:

Downtitration of propofol from maintenance dosage according to each individual patient's needs. Intravenous administration via syringe pump.

Notes:

[3] - The number of roles blinded appears inconsistent with a single blinded trial. It is expected that there will be one role blinded in a single blind trial.

Justification: An expert assessor who reviewed the Narcotrend data after the end of the general anesthesia was not informed about the patients' treatment allocation.

Number of subjects in period 4	Remimazolam All	Propofol
Started	62	28
Completed	62	28

Period 5

Period 5 title	Follow-up
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Single blind
Roles blinded	Subject

Blinding implementation details:

Patients were not informed about their treatment allocation to avoid bias on patients' statements, e.g. regarding adverse events.

-----------------------	-----------------------------------

Reporting group description:

All patients on remimazolam, i.e. patients with induction with remimazolam 6 mg/kg/hr AND patients with induction with remimazolam 12 mg/kg/hr. For maintenance, remimazolam 1 - 3 mg/kg/hr was administered. Down titration and stop of remimazolam during recovery.

Reporting group title	Safety Population Propofol/Sevoflurane
-----------------------	--

Reporting group description:

All patients who received any amount of study drug and who got propofol for induction. For maintenance, sevoflurane 0.8 - 2.5 MAC was administered until start of extracorporeal circulation. From start of extracorporeal circulation, propofol 3 -12 mg/kg/hr was administered. Down titration and stop of propofol during recovery.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
18 September 2013	1.) Remimazolam dosage for maintenance increased from 1 - 2 mg/kg/hr to 1 - 3 mg/kg/hr 2.) post-operative bleedings were to be reported as AEs only if administration of at least one transfusion or at least one unit of products that support blood coagulation was required or if re-surgery was required 3.) cardiac arrhythmias did not need to be reported as AEs if they occurred within 5 minutes before or after cardioplegia that was induced for extracorporeal circulation or if they stopped within 30 seconds 4.) plus further minor corrections and clarifications of the protocol

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
