Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	01 June 2015
Is this the analysis of the primary completion data?	Yes
Primary completion date	12 June 2014
Global end of trial reached?	Yes
Global end of trial date	12 June 2014
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The objective of this study was to describe and compare plasma, subcutaneous tissue and bone pharmacokinetics of cefuroxime after traditional short-term infusion (STI) and continuous infusion (CI). The primary endpoint is time that the free cefuroxime concentration exceeds the minimal inhibitory concentration (fT>MIC) for the predominant staphylococcus aureus MIC of 1 mg/L. This endpoint is reported as the probability of attaining clinically relevant targets of 65% and 90% fT>MIC over the 8 hour observation period.

Protection of trial subjects:

All trial subjects were observed by an investigator during administration of cefuroxime and during the subsequent sample collection.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	24 September 2013
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Denmark: 18
Worldwide total number of subjects	18
EEA total number of subjects	18

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	3
From 65 to 84 years	15

85 years and over	0
-------------------	---

Subject disposition

Recruitment

Recruitment details:

Recruitment began in september 2013 and ended june 2014. All patients were recruited from department of Orthopaedic surgery, Horsens Regional Hospital, Denmark

Pre-assignment

Screening details:

Competent male patients were offered enrolment in the study if they were scheduled for a total knee replacement. Exclusion criteria included the following: allergy to cefuroxime or vancomycin, on-going treatment with cefuroxime, and clinically reduced renal function.

Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Blinding implementation details:

The investigators were blinded to the mode of cefuroxime administration during surgical placement of the microdialysis catheters, so that the procedure would not be affected by this knowledge.

Arms

Are arms mutually exclusive?	Yes
Arm title	Short-term infusion (STI)

Arm description:

The patients in this arm were given 1,500 mg of cefuroxime (Fresenius Kabi AB, Sweden) intravenously in a peripheral catheter as STI (over 15 min)

Arm type	Active comparator
Investigational medicinal product name	Cefuroxim Fresenius Kabi
Investigational medicinal product code	J 01 DC 02
Other name	
Pharmaceutical forms	Powder and solvent for concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

The patients in this arm were given 1,500 mg of cefuroxime (Fresenius Kabi AB, Sweden) intravenously in a peripheral catheter as STI (over 15 min)

Arm title	Continuous infusion (CI)
------------------	--------------------------

Arm description:

The patients in this arm were given 1,500 mg of cefuroxime (Fresenius Kabi AB, Sweden) intravenously in a peripheral catheter as CI (500 mg as loading dose over 5 min followed by CI of the remaining 1,000 mg over 7 hours and 55 min)

Arm type	Active comparator
Investigational medicinal product name	Cefuroxim Fresenius Kabi
Investigational medicinal product code	J 01 DC 02
Other name	
Pharmaceutical forms	Powder and solvent for concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

The patients in this arm were given 1,500 mg of cefuroxime (Fresenius Kabi AB, Sweden) intravenously in a peripheral catheter as CI (500 mg as loading dose over 5 min followed by CI of the remaining 1,000 mg over 7 hours and 55 min)

Number of subjects in period 1	Short-term infusion (STI)	Continuous infusion (CI)
Started	9	9
Completed	9	9

End points

End points reporting groups

Reporting group title	Short-term infusion (STI)
Reporting group description: The patients in this arm were given 1,500 mg of cefuroxime (Fresenius Kabi AB, Sweden) intravenously in a peripheral catheter as STI (over 15 min)	
Reporting group title	Continuous infusion (CI)
Reporting group description: The patients in this arm were given 1,500 mg of cefuroxime (Fresenius Kabi AB, Sweden) intravenously in a peripheral catheter as CI (500 mg as loading dose over 5 min followed by CI of the remaining 1,000 mg over 7 hours and 55 min)	

Primary: Probability of target attainment (for a target of 65% fT > MIC in cancellous bone for a MIC of 1 mg/L)

End point title	Probability of target attainment (for a target of 65% fT > MIC in cancellous bone for a MIC of 1 mg/L) ^[1]
End point description: Using a non-linear mixed effects regression model with a random patient effect for each of the model parameters, a two-compartment model were fitted to the drug concentration data separately for the different tissues. Monte Carlo simulation was used to determine the probability of target attainment (PTA) for targets of 65% (low target) and 90% fT > MIC (high target) for the observation period of 8 hours, and to estimate the area under the concentration–time curve from 0 to infinity.	
End point type	Primary
End point timeframe: Cefuroxime concentrations were quantified within 6 weeks after sample collection using an ultra high performance liquid chromatography assay.	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Population pharmacokinetic modelling and Monte Carlo Simulations provide probabilities of attaining specified targets (probability of target attainment, PTA). Comparison of PTA between groups are usually not supported by other statistical analyses.

Reporting groups

Reporting group title	Short-term infusion group
-----------------------	---------------------------

Reporting group description:

The patients in this arm were given 1,500 mg of cefuroxime (Fresenius Kabi AB, Sweden) intravenously in a peripheral catheter as STI (over 15 min)

Reporting group title	Continuous infusion
-----------------------	---------------------

Reporting group description:

The patients in this arm were given 1,500 mg of cefuroxime (Fresenius Kabi AB, Sweden) intravenously in a peripheral catheter as CI (500 mg as loading dose over 5 min followed by CI of the remaining 1,000 mg over 7 hours and 55 min)

Serious adverse events	Short-term infusion group	Continuous infusion	
Total subjects affected by serious adverse events			
subjects affected / exposed	1 / 9 (11.11%)	0 / 9 (0.00%)	
number of deaths (all causes)	0	0	
number of deaths resulting from adverse events	0	0	
Infections and infestations			
prosthetic infection (knee)	Additional description: One patient acquired prosthetic infection within a month after surgery, but this could not be related to the experiment. After replacement of mobile prosthetic components and antibiotic therapy, the patient was cured.		
alternative assessment type: Non-systematic			
subjects affected / exposed	1 / 9 (11.11%)	0 / 9 (0.00%)	
occurrences causally related to treatment / all	0 / 1	0 / 0	
deaths causally related to treatment / all	0 / 0	0 / 0	

Frequency threshold for reporting non-serious adverse events: 1 %

Non-serious adverse events	Short-term infusion group	Continuous infusion	
Total subjects affected by non-serious adverse events			
subjects affected / exposed	0 / 9 (0.00%)	1 / 9 (11.11%)	
Nervous system disorders			

Vasovagal attack subjects affected / exposed occurrences (all)	0 / 9 (0.00%) 0	1 / 9 (11.11%) 1	
--	--------------------	---------------------	--

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? No

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Data were analysed using population pharmacokinetic modelling and Monte Carlo Simulations. It should be noted that other modellers/analysts may come to slightly different results because of different approaches, models and software.
--
