

Clinical trial results:

Cardiovascular (CV) risk prediction and CV biomarkers in renal transplant recipients treated with belatacept compared to calcineurin inhibitors (CNI).

Open randomized 12 month study.

Summary

EudraCT number	2013-001178-20
Trial protocol	SE DK NL
Global end of trial date	13 September 2018

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	29 June 2020
Is this the analysis of the primary completion data?	Yes
Primary completion date	13 September 2018
Global end of trial reached?	Yes
Global end of trial date	13 September 2018
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective is to compare cardiovascular(CV) risk estimated by a renal transplant specific CV calculator in renal transplant recipients (RTR) randomized to belatacept or CNI-based immunosuppression.

Protection of trial subjects:

Subjects were fully informed of all pertinent aspects of the clinical trial as well as the possibility to withdraw at any time. All patients were informed about the study both orally and in writing, and signed the informed consent prior to any study related procedures took place. Patients were treated in the clinic with standard care for this population.

Background therapy:

No treatments that were not test or comparator was used across the two arms in the trial.

Evidence for comparator:

Standard treatment for renal transplant recipients is the use of CNI. Half of the population remained on this treatment as a comparator and the other half received belatacept.

Actual start date of recruitment	18 September 2014
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Netherlands: 32
Country: Number of subjects enrolled	Norway: 16
Country: Number of subjects enrolled	Sweden: 37
Country: Number of subjects enrolled	Denmark: 20
Worldwide total number of subjects	105
EEA total number of subjects	105

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0

Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	61
From 65 to 84 years	44
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

The study was conducted in 4 countries, and 11 recruiting sites. Denmark 2 sites, The Netherlands: 1 site, Norway: 1 site, and Sweden 5 sites. A total of 111 were randomized, but 6 of the subject never received any treatment, leaving 105 subject in the study. Of these, 54 received belatacept and 51 received CNI.

Pre-assignment

Screening details:

- Signed Written Informed Consent
- Renal transplant recipients of living donor or deceased donor kidney transplant.
- Stable renal graft with no need for exploratory examination eGFR > 20 ml/min)
- Tacrolimus or CsA (cyclosporine A) standard treatment since transplantation
- 3 – 60 months post-transplantation
- Men and women, aged 18 to 80

Period 1

Period 1 title	Overall study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Blinding implementation details:

CNIs are administered orally as a daily dose of tablets, while belatacept is administered as monthly IV infusion, hence an open study design was chosen.

Arms

Are arms mutually exclusive?	Yes
Arm title	Belatacept arm

Arm description:

Belatacept (Nulojix) is administered as IV infusion on day 1, 15, 29, 43, 57 and then every month thereafter, for a total of 11 months, i.e. 14 infusions.

Both groups had the same underlying immunosuppressive regimen, consisting of

- +/- mycophenolic acid, as mycophenolate mofetil or enteric coated mycophenolate sodium
- +/- corticosteroids

Arm type	Experimental
Investigational medicinal product name	Belatacept
Investigational medicinal product code	L04A A28
Other name	Nulojix
Pharmaceutical forms	Powder for concentrate
Routes of administration	Intravenous use

Dosage and administration details:

Belatacept was administered at a dose of 5 mg/kg body weight. IV infusion took place on day 1, 15, 29, 43, 57 and then every month thereafter, for a total of 14 infusions. The CNI product was down-titrated and finally stopped on Day 28.

Arm title	CNI arm
------------------	---------

Arm description:

Standard immunosuppressive regimen with CNI (cyclosporin or tacrolimus).

Both groups had the same underlying immunosuppressive regimen, consisting of

- +/- mycophenolic acid, as mycophenolate mofetil or enteric coated mycophenolate sodium
- +/- corticosteroids

Arm type	Active comparator
----------	-------------------

Investigational medicinal product name	Tacrolimus/Ciclosporin
Investigational medicinal product code	L04A
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Subjects randomized to the CNI arm continued their regulated treatment with the CNI product for 12 month in the study.

Number of subjects in period 1	Belatacept arm	CNI arm
Started	54	51
Completed	49	49
Not completed	5	2
Consent withdrawn by subject	1	1
Adverse event, non-fatal	3	1
Moved out of the country	1	-

Baseline characteristics

Reporting groups

Reporting group title	Belatacept arm
-----------------------	----------------

Reporting group description:

Belatacept (Nulojix) is administered as IV infusion on day 1, 15, 29, 43, 57 and then every month thereafter, for a total of 11 months, i.e. 14 infusions.

Both groups had the same underlying immunosuppressive regimen, consisting of

- +/- mycophenolic acid, as mycophenolate mofetil or enteric coated mycophenolate sodium
- +/- corticosteroids

Reporting group title	CNI arm
-----------------------	---------

Reporting group description:

Standard immunosuppressive regimen with CNI (cyclosporin or tacrolimus).

Both groups had the same underlying immunosuppressive regimen, consisting of

- +/- mycophenolic acid, as mycophenolate mofetil or enteric coated mycophenolate sodium
- +/- corticosteroids

Reporting group values	Belatacept arm	CNI arm	Total
Number of subjects	54	51	105
Age categorical			
A total of 112 patients signed the informed consent form. Of these, 1 patient was a screen failure and was never randomized. Of the 111 randomized patients, 6 withdrew consent before any study drug was given, of which 4 were in the belatacept arm and 2 in the CNI arm. Thus, 105 patients were randomized; 54 to the belatacept arm and 51 to the CNI arm. In the belatacept arm 5 patients were withdrawn prematurely from the study; 3 due to AEs, 1 withdrew consent and 1 moved out of the country. Similarly, there were 2 prematurely withdrawals in the CNI arm; 1 due to AE and 1 withdrew consent.			
Units: Subjects			
Adults (18-64 years)	29	32	61
From 65-84 years	25	19	44
85 years and over	0	0	0
Gender categorical			
Units: Subjects			
Female	13	13	26
Male	41	38	79

Primary: MACE

End point title	MACE
End point description:	
In order to evaluate the cardiovascular benefit of belatacept, the CVD risk calculation was chosen as the primary endpoint, i.e. the estimated risk of major adverse cardiovascular events (MACE) and mortality at one year. The MACE is calculated as a linear combination of the following variables: age, previous coronary heart disease, previous smoker, current smoker, creatinine, diabetes mellitus, low-density lipoprotein (LDL) and number of transplants.	
End point type	Primary
End point timeframe:	
Belatacept versus CNI after one year of treatment	

End point values	Belatacept arm	CNI arm		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	54 ^[1]	51 ^[2]		
Units: Predicted risk for MACE				
arithmetic mean (standard deviation)	0.15 (± 0.15)	0.15 (± 0.15)		

Notes:

[1] - The value is the estimated risk for MACE in the Belatacept group after Month 12.

[2] - The value is the estimated risk for MACE in the CNI group after Month 12.

Statistical analyses

Statistical analysis title	Primary analysis for MACE after Month 12
Statistical analysis description:	
The primary endpoint was the estimated risk of MACE and mortality as per the risk calculator generated by Soveri et al., a calculator which is based on an observation period of 7 years. Here is shows the estimated risk prediction at 7 years by using the data collected in this study at one year.	
Comparison groups	CNI arm v Belatacept arm

Number of subjects included in analysis	105
Analysis specification	Pre-specified
Analysis type	equivalence
Parameter estimate	Log means
Point estimate	0.064089
Confidence interval	
level	95 %
sides	2-sided
lower limit	-0.043106
upper limit	0.171284
Variability estimate	Standard deviation

Primary: Mortality

End point title	Mortality
End point description:	
In order to evaluate the cardiovascular benefit of belatacept, the CVD risk calculation was chosen as the primary endpoint, i.e. the estimated risk of major adverse cardiovascular events (MACE) and mortality at one year. The MACE is calculated as a linear combination of the following variables: age, previous coronary heart disease, previous smoker, current smoker, creatinine, diabetes mellitus, low-density lipoprotein (LDL) and number of transplants.	
End point type	Primary
End point timeframe:

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
05 March 2014	<p>The substantial amendment included the following changes:</p> <ul style="list-style-type: none">• Blood samples to be collected at 0, 6 and 12 months for evaluation of biomarkers for CV risk factors.• Changes in number of patients to be enrolled. The reason for the change was due to the estimated reduction in MACE CV risk score had been downgraded from 40% to 30%, which lead to the need of increasing sample size from 50 to 110.• For patients discontinuing the study before one year, the last available estimate of CV risk was used in the analysis of the ITT population.
12 December 2014	<p>The substantial amendment included the following changes:</p> <ul style="list-style-type: none">• Specifications in the inclusion/exclusion criteria.• Addition of traditional CV biomarkers; ApoB and ApoA1. The ratio for ApoB/ApoA1 added because it has been shown as an efficient test for predicting risk for CV disease.• With the start of the study at three Swedish sites, a need for additional criteria for exclusion from the study as well as clarifications of existing inclusion/exclusion criteria had been discovered.<ul style="list-style-type: none">o Exclusion criterion 4b; Previous/on-going use of rituximab has been added to the protocol since the use of rituximab in renal transplants is always an "off-label" (i.e. unapproved) related to humoral rejection. Previous in-label use may be related to treatment of CD20+ B-cell lymphomas, which in turn should be an exclusion criterion, taken into account the increased risk of PTLD with belatacept. Therefore, patients with previous use of rituximab due to e.g. treatment of B-cell lymphoma might not be candidates for conversion to belatacept.o Exclusion criterion 3b; History of tuberculosis has been added to avoid re-activation of tuberculosis as tuberculosis (along with PTLD) has previously been reported as a principal safety finding associated with belatacept.
23 May 2017	<p>The substantial amendment included the following changes:</p> <ul style="list-style-type: none">• Sponsor has updated the calculation of infusion dose in order to be in alignment with the SmPC of belatacept. Infusion doses will be based on the patient's body weight at baseline. If weight later changes more than +/- 10% a new dose was to be calculate.• Clarification of the exclusion criteria regarding tuberculosis and the use of rituximab was made.• Clarification of the term "Discontinuation of Patients from Treatment" was made, and also included a description of the follow up of patients who were withdrawn from the study.• An update regarding risk monitoring was made.• The different heart diseases were described in more detail.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
