Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-001254-PIP01-11
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	11 February 2017
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	27 July 2016
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To demonstrate the clinical efficacy of 2 doses of QIV in previously unvaccinated subjects aged 6 to 35 months for the prevention of at least one of the following:

*Laboratory-confirmed influenza caused by any influenza A or B types

*Laboratory-confirmed influenza illness caused by viral strains similar to those contained in the vaccine

Protection of trial subjects:

Only subjects that met all the study inclusion and none of the exclusion criteria were randomized and vaccinated in the study. Vaccinations were performed by qualified and trained study personnel. Subjects with allergy to any of the vaccine components were not vaccinated. After vaccination, subjects were also kept under clinical observation for 30 minutes to ensure their safety. Appropriate medical equipment was also available on site in case of any immediate allergic reactions.

Background therapy:

Not applicable

Evidence for comparator:

Not applicable

Actual start date of recruitment	12 March 2014
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Dominican Republic: 476
Country: Number of subjects enrolled	Honduras: 614
Country: Number of subjects enrolled	South Africa: 500
Country: Number of subjects enrolled	Philippines: 2999
Country: Number of subjects enrolled	Romania: 46
Country: Number of subjects enrolled	Spain: 850
Country: Number of subjects enrolled	France: 13
Country: Number of subjects enrolled	Greece: 225
Country: Number of subjects enrolled	Italy: 82
Worldwide total number of subjects	5805
EEA total number of subjects	1216

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	3741
Children (2-11 years)	2064
Adolescents (12-17 years)	0
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Study subjects were enrolled from 12 March 2014 to 4 December 2015 at a total of 43 clinical centers (19 clinical centers in Spain, 6 in the Philippines, 5 in Greece, 5 in Romania, 4 in Italy, 1 in South Africa, 1 in Honduras, 1 in Dominican Republic, and 1 in France).

Pre-assignment

Screening details:

A total of 5805 subjects who met all inclusion criteria and no exclusion criteria were randomized in the study; 1 subject was enrolled in the study and injected with placebo before having been randomized. This subject was withdrawn from the study due to non-compliance with protocol procedures; data are presented on 5805 subjects.

Period 1

Period 1 title	Year 1
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Blinding implementation details:

This trial was observer-blinded, except for Trivalent Influenza Vaccine (TIV) groups which were open label. The person who administered the vaccine was different from the person assessing safety and identifying influenza-like illness (ILI) cases. Subjects' parents/representative also did not know which vaccine was administered.

Arms

Are arms mutually exclusive?	Yes
Arm title	Quadrivalent Influenza Vaccine (QIV) - Year 1

Arm description:

Subjects in this group received 2 doses of Quadrivalent Influenza Vaccine (split-virion, inactivated; QIV) 28 days apart.

Arm type	Experimental
Investigational medicinal product name	Quadrivalent influenza vaccine (split-virion, inactivated)
Investigational medicinal product code	481
Other name	QIV
Pharmaceutical forms	Suspension for injection in pre-filled syringe
Routes of administration	Intramuscular use, Subcutaneous use

Dosage and administration details:

0.5 mL, intramuscular or deep subcutaneous to be injected into the deltoid or the thigh, 2 doses 28 days apart

Arm title	Placebo - Year 1
------------------	------------------

Arm description:

Subjects in this group received 2 doses of placebo 28 days apart.

Arm type	Placebo
Investigational medicinal product name	Normal saline (placebo)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Intramuscular use, Subcutaneous use

Dosage and administration details:

0.5 mL, intramuscular or deep subcutaneous to be injected into the deltoid or the thigh, 2 doses 28 days apart.

Arm title	Trivalent Influenza Vaccine (TIV1) - Year 1
Arm description: Subjects received 2 doses of the Trivalent Influenza Vaccine (split-virion, inactivated; TIV1) 28 days apart.	
Arm type	Active comparator
Investigational medicinal product name	Trivalent influenza vaccine (split-virion, inactivated)
Investigational medicinal product code	TIV1
Other name	
Pharmaceutical forms	Suspension for injection in pre-filled syringe
Routes of administration	Intramuscular use, Subcutaneous use
Dosage and administration details: 0.5 mL, intramuscular or deep subcutaneous to be injected into the deltoid or the thigh, 2 doses 28 days apart	
Arm title	Trivalent Influenza Vaccine (TIV2) - Year 1
Arm description: Subjects received 2 doses of Trivalent Influenza Vaccine (split-virion, inactivated; TIV2; Sanofi Pasteur licensed TIV for the NH 2014-2015 season) 28 days apart.	
Arm type	Active comparator
Investigational medicinal product name	Trivalent influenza vaccine (split-virion, inactivated)(Sanofi Pasteur licensed TIV for the NH 2014-2015 season)
Investigational medicinal product code	TIV2
Other name	
Pharmaceutical forms	Suspension for injection in pre-filled syringe
Routes of administration	Intramuscular use, Subcutaneous use
Dosage and administration details: 0.5 mL, intramuscular or deep subcutaneous to be injected into the deltoid or the thigh, 2 doses 28 days apart	

Number of subjects in period 1	Quadrivalent Influenza Vaccine (QIV) - Year 1	Placebo - Year 1	Trivalent Influenza Vaccine (TIV1) - Year 1
Started	2721	2715	183
Vaccinated at D0	2717	2711	182
Vaccinated at D28	2627	2623	174
Completed	2559	2570	173
Not completed	162	145	10
Consent withdrawn by subject	60	53	4
Adverse event, non-fatal	3	-	-
Serious adverse event	5	1	-
Lost to follow-up	32	28	1
Protocol deviation	62	63	5

Number of subjects in period 1	Trivalent Influenza Vaccine (TIV2) - Year 1
Started	186
Vaccinated at D0	185
Vaccinated at D28	180

Completed	179
Not completed	7
Consent withdrawn by subject	5
Adverse event, non-fatal	-
Serious adverse event	-
Lost to follow-up	-
Protocol deviation	2

Period 2

Period 2 title	Year 2
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Blinding implementation details:

This trial was observer-blinded, except for Trivalent Influenza Vaccine (TIV) groups which were open label. The person who administered the vaccine was different from the person assessing safety and identifying influenza-like illness (ILI) cases. Subjects' parents/representative also did not know which vaccine was administered.

Arms

Are arms mutually exclusive?	Yes
Arm title	Quadrivalent Influenza Vaccine (QIV) - Year 2

Arm description:

Subjects in this group were revaccinated with 2 doses of Quadrivalent Influenza Vaccine (split-virion, inactivated; QIV) 28 days apart.

Arm type	Experimental
Investigational medicinal product name	Quadrivalent influenza vaccine (split-virion, inactivated)
Investigational medicinal product code	481
Other name	QIV
Pharmaceutical forms	Suspension for injection in pre-filled syringe
Routes of administration	Subcutaneous use, Intramuscular use

Dosage and administration details:

0.5 mL, intramuscular or deep subcutaneous to be injected into the deltoid or the thigh, 2 doses 28 days apart

Arm title	Placebo - Year 2
------------------	------------------

Arm description:

Subjects in this group received 2 doses of QIV 28 days apart

Arm type	Placebo
Investigational medicinal product name	Normal saline (placebo)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Intramuscular use, Subcutaneous use

Dosage and administration details:

0.5 mL, intramuscular or deep subcutaneous to be injected into the deltoid or the thigh, 2 doses 28 days apart.

Number of subjects in period 2^[1]	Quadrivalent Influenza Vaccine (QIV) - Year 2	Placebo - Year 2
Started	213	41
Completed	209	41
Not completed	4	0
Consent withdrawn by subject	2	-
Protocol deviation	2	-

Notes:

[1] - The number of subjects starting the period is not consistent with the number completing the preceding period. It is expected the number of subjects starting the subsequent period will be the same as the number completing the preceding period.

Justification: Subjects included in the Period Year 2 were a randomized subset of participants from Latin America and Europe who were asked to return the following year to receive QIV, 2 doses 28 days apart. Not all participants included in Period Year 1 were included in Period Year 2.

Baseline characteristics

Reporting groups

Reporting group title	Quadrivalent Influenza Vaccine (QIV) - Year 1
Reporting group description:	
Subjects in this group received 2 doses of Quadrivalent Influenza Vaccine (split-virion, inactivated; QIV) 28 days apart.	
Reporting group title	Placebo - Year 1
Reporting group description:	
Subjects in this group received 2 doses of placebo 28 days apart.	
Reporting group title	Trivalent Influenza Vaccine (TIV1) - Year 1
Reporting group description:	
Subjects received 2 doses of the Trivalent Influenza Vaccine (split-virion, inactivated; TIV1) 28 days apart.	
Reporting group title	Trivalent Influenza Vaccine (TIV2) - Year 1
Reporting group description:	
Subjects received 2 doses of Trivalent Influenza Vaccine (split-virion, inactivated; TIV2; Sanofi Pasteur licensed TIV for the NH 2014-2015 season) 28 days apart.

Subject analysis set description: TIV1 arm and TIV2 arm pooled for immunogenicity and safety analysis	

Primary: Number of Subjects With an Laboratory-confirmed Influenza-like Illness caused by any influenza A or B strains or vaccine similar strains

End point title	Number of Subjects With an Laboratory-confirmed Influenza-like Illness caused by any influenza A or B strains or vaccine similar strains ^[1]
End point description: Influenza-like illness (ILI) was defined by the occurrence of fever $\geq 38^{\circ}\text{C}$ (that lasted at least 24 hours) concurrently with at least one of the following symptoms: cough, nasal congestion, rhinorrhea, pharyngitis, otitis, vomiting, or diarrhea. Laboratory-confirmed influenza was defined either by a positive influenza result on polymerase chain reaction (PCR) or viral culture of nasopharyngeal (NP) swab samples.	
End point type	Primary
End point timeframe: From 14 days post-last vaccination to the end of influenza season according to Global Influenza Surveillance and Response System according to the region	

Notes:

[1] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period. Justification: Laboratory-confirmed ILI cases were reported in the QIV and Placebo groups for the assessment of vaccine efficacy

End point values	Quadrivalent Influenza Vaccine (QIV) - Year 1	Placebo - Year 1		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	2489	2491		
Units: Number of subjects				
number (not applicable)				
Any influenza A or B type	120	245		
Viral strains similar to those in vaccine	24	76		

Statistical analyses

Statistical analysis title	Vaccine efficacy; Any influenza A or B type
-----------------------------------	---

Statistical analysis description:

This analysis assessed the clinical vaccine efficacy (VE) against laboratory-confirmed influenza illness caused by influenza A or B types.

Comparison groups	Quadrivalent Influenza Vaccine (QIV) - Year 1 v Placebo - Year 1
Number of subjects included in analysis	4980
Analysis specification	Pre-specified
Analysis type	other ^[2]
Parameter estimate	Vaccine efficacy (%)
Point estimate	50.98
Confidence interval	
level	Other: 97 %
sides	2-sided
lower limit	37.36
upper limit	61.86

Notes:

[2] - The VE for one primary endpoint was considered demonstrated if the lower bound of the confidence interval (CI) for the corresponding VE was >20%. The primary objective of efficacy was considered demonstrated if efficacy was demonstrated for at least one of the two primary endpoints.

Statistical analysis title	Vaccine efficacy; Viral strains similar to vaccine
-----------------------------------	--

Statistical analysis description:

This analysis assessed the clinical vaccine efficacy (VE) against laboratory-confirmed influenza illness caused by viral strains similar to those contained in the vaccine.

Comparison groups	Quadrivalent Influenza Vaccine (QIV) - Year 1 v Placebo - Year 1
Number of subjects included in analysis	4980
Analysis specification	Pre-specified
Analysis type	other ^[3]
Parameter estimate	Vaccine efficacy (%)
Point estimate	68.4
Confidence interval	
level	Other: 97 %
sides	2-sided
lower limit	47.07
upper limit	81.92

Notes:

[3] - The VE for one primary endpoint was considered demonstrated if the lower bound of the CI for the corresponding VE was >20%. The primary objective of efficacy was considered demonstrated if efficacy was demonstrated for at least one of the two primary endpoints.

Secondary: Number of Subjects With an Influenza-like Illness (ILI) as confirmed by Laboratory, Culture, and PCR, as well as ILI Associated with Hospitalizations

End point title	Number of Subjects With an Influenza-like Illness (ILI) as confirmed by Laboratory, Culture, and PCR, as well as ILI Associated with Hospitalizations ^[4]
-----------------	--

End point description:

ILI was defined by the occurrence of fever $\geq 38^{\circ}\text{C}$ (that lasted at least 24 hours) concurrently with at least one of the following symptoms: cough, nasal congestion, rhinorrhea, pharyngitis, otitis, vomiting, or diarrhea. Laboratory-confirmed ILI was defined either by a positive influenza result on PCR or viral culture of NP swab samples. Culture-confirmed ILI was defined by a positive influenza result on viral culture of NP swabs. A PCR-confirmed ILI was defined by a positive influenza result on PCR of NP swab samples. Laboratory-confirmed ILI associated with hospitalizations (referred to as 'Lab-ILI [hospitalization]' in the table) is also reported. VE was reported for each ILI category, except for laboratory-confirmed ILI associated with hospitalization caused by vaccine-similar strain.

End point type	Secondary
----------------	-----------

End point timeframe:

From 14 days post-last vaccination to the end of influenza season according to Global Influenza Surveillance and Response System according to the region

Notes:

[4] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period. Justification: Laboratory-confirmed ILI cases were reported in the QIV and Placebo groups for the assessment of vaccine efficacy

End point values	Quadrivalent Influenza Vaccine (QIV) - Year 1	Placebo - Year 1		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	2489	2491

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Solicited reactions were collected up to Day 7 after each injection, non-serious unsolicited adverse events (AEs) were collected up to Day 28 after each injection, and serious AEs were collected throughout the study period.

Adverse event reporting additional description:

Non-serious solicited reactions and unsolicited AEs were reported in Cohort 1 and Cohort 2 in Year 1. Serious AEs were reported in all subjects throughout the study period.

Notes:

[1] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: Non-serious solicited reactions and unsolicited AEs were collected in Cohort 1 and Cohort 2.

[2] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: Non-serious solicited reactions and unsolicited AEs were collected in Cohort 1 and Cohort 2.

[3] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: Non-serious solicited reactions and unsolicited AEs were collected in Cohort 1 and Cohort 2.

[4] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: Non-serious solicited reactions and unsolicited AEs were collected in Cohort 1 and Cohort 2.

Justification: Non-serious solicited reactions and unsolicited AEs were collected in Cohort 1 and Cohort 2.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
30 September 2013	Latin American and European clinical sites were added to secure the sample size of children.
27 January 2014	The time window from 1st vaccination to 2nd second vaccination was extended from 25 to 38 days to ensure that there was no impact on the immune response.
03 November 2014	Addition of testing done on laboratory-confirmed influenza and Ferret antigenicity testing (culture-confirmed influenza) was added; and sequencing of virus strains to be used was defined as Sanger sequencing.
18 March 2015	A provision to the methodology protocol was added to allow for the update of alpha values according to actual number of cases reported in the trial; transient thrombocytopenia was moved from potential to expected rare adverse events; parents were notified of this change and provided a second informed consent form.
14 September 2015	Changed a secondary objective/endpoint (influenza cases caused by vaccine-similar strains) to a co-primary endpoint to accurately assess vaccine efficacy; further revised and clarified the criteria and terms of performing the interim analyses.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
