

Statistical Analyses 1 for Change From Baseline in Heart Rate at Specified Time Point

Statistical analysis title	Statistical analysis 1: BAY1067197 Versus Placebo		Analysis Type	Other
			Comment	
Statistical analysis description	To investigate a pharmacodynamics effect of BAY1067197 on heart rate, an exploratory analysis of covariance (ANCOVA) was performed on the data of Day -1 and Day 1 up to 4 hours after baseline on each of these days including the fixed factors treatment, time, treatment*time, and the baseline on the corresponding day as covariate. 95% confidence intervals were provided for the treatment effect difference between BAY 1067197 and placebo.			
Comparison groups or subject analysis sets	(BAY1067197 30 mg + Beta-blocker) Versus (Placebo + Beta-blocker)			
Number of subjects in this analysis	11			
Analysis specification	Pre-specified			
Statistical hypothesis test				
P-value	=	Value: 0.0176	Comment	
Method [Required if P-value provided]	ANCOVA			
Parameter Estimate				
Parameter type	Mean Difference (Net)			
Point estimate	-1.8752			

Confidence interval	Level	95%	Sides	2	Lower limit	-3.3466	Upper limit	-0.4038
Variability estimate	Choose an item.			Dispersion Value
