

## Clinical trial results:

**A randomized, open-label, parallel group, multi-center Phase II clinical trial evaluating effect of addition of DCVAC/OvCa to standard chemotherapy (carboplatin and gemcitabine) in women with relapsed platinum sensitive epithelial ovarian carcinoma**

### Summary

EudraCT number	2013-001323-38
Trial protocol	CZ DE PL
Global end of trial date	17 May 2018

### Results information

Result version number	v1 (current)
This version publication date	06 June 2019
First version publication date	06 June 2019

### Trial information

#### Trial identification

Sponsor protocol code	SOV02
-----------------------	-------

#### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT02107950
WHO universal trial number (UTN)	-

Notes:

Notes:

### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	17 May 2018
Is this the analysis of the primary completion data?	Yes
Primary completion date	17 May 2018
Global end of trial reached?	Yes
Global end of trial date	17 May 2018
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

### PRIMARY OBJECTIVE

The primary objective was to explore the effect of adding DCVAC/OvCa to chemotherapy on progression-free survival in women with ovarian cancer who experienced relapse >6 months after complete remission following platinum (Pt)-based first-line chemotherapy.

### SECONDARY OBJECTIVES

- Overall survival
- Objective response rate
- Biological progression-free interval
- Immune response
- Safety
- Changes in quality of life

Protection of trial subjects:

Not applicable

Background therapy:

All patients were to receive chemotherapy with carboplatin and gemcitabine in 3-week cycles. On day 1 of each cycle, carboplatin area under the curve (AUC) 4-5 and gemcitabine 1000 mg/m<sup>2</sup> were to be administered, and on day 8 gemcitabine 1000 mg/m<sup>2</sup> was to be administered. A total of 6, 8, or 10 cycles of chemotherapy were to be completed as per investigators' decision. Chemotherapy was to be started within 7 days after leukapheresis for patients in treatment group A or within 2 weeks after randomization for patients in treatment group B.

Evidence for comparator: -

Actual start date of recruitment	04 November 2013
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Poland: 8
Country: Number of subjects enrolled	Czech Republic: 50
Country: Number of subjects enrolled	Germany: 6
Worldwide total number of subjects	64
EEA total number of subjects	64

Notes:

<b>Subjects enrolled per age group</b>	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	46
From 65 to 84 years	18
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details: -

### Pre-assignment

Screening details:

Nine sites in the Czech Republic, 2 sites in Germany, and 4 sites in Poland screened at least 1 patient. Recruitment started on 04-Nov-2013 (first patient signed the informed consent form).

### Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Treatment group A

Arm description:

Patients in treatment group A received up to 10 subcutaneous doses of DCVAC/OvCa in addition to chemotherapy. The first 5 doses of DCVAC/OvCa were administered at 3-week intervals (with an acceptable window of  $\pm 3$  days), followed by dosing at 6-week intervals (with an acceptable window of  $\pm 3$  days). Each dose of DCVAC/OvCa was to be administered  $4 \pm 3$  days before the nearest following dose of chemotherapy when given alongside the chemotherapy. The first dose of DCVAC/OvCa was administered after the second cycle of chemotherapy.

Arm type	Experimental
Investigational medicinal product name	DCVAC/OvCa
Investigational medicinal product code	Not applicable
Other name	Not applicable
Pharmaceutical forms	Dispersion for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Subcutaneous injection of approximately  $1 \times 10^7$  autologous dendritic cells

<b>Arm title</b>	Treatment group B
------------------	-------------------

Arm description:

No investigational medicinal product assigned in this arm

Arm type	No intervention
No investigational medicinal product assigned in this arm	

Number of subjects in period 1	Treatment group A	Treatment group B
Started	32	32
Completed	20	11
Not completed	12	21
Consent withdrawn by subject	2	8
Physician decision	1	1
Adverse event, non-fatal	-	1
Death	9	11

## End points

### End points reporting groups

Reporting group title	Treatment group A
-----------------------	-------------------

Reporting group description:

Patients in treatment group A received up to 10 subcutaneous doses of DCVAC/OvCa in addition to chemotherapy. The first 5 doses of DCVAC/OvCa were administered at 3-week intervals (with an acceptable window of  $\pm 3$  days), followed by dosing at 6-week intervals (with an acceptable window of  $\pm 3$  days). Each dose of DCVAC/OvCa was to be administered 4 $\pm$ 3 days before the nearest following dose of chemotherapy when given alongside the chemotherapy. The first dose of DCVAC/OvCa was administered after the second cycle of chemotherapy.

Reporting group title	Treatment group B
-----------------------	-------------------

Reporting group description:

No investigational medicinal product assigned in this arm

Subject analysis set title	Intention-to-treat
----------------------------	--------------------

Subject analysis set type	Intention-to-treat
---------------------------	--------------------

Subject analysis set description:

The intention-to-treat (ITT) population consisted of all randomized patients regardless of whether they received treatment or not; however, patients randomized to treatment group A who failed to receive at least 1 dose of DCVAC/OvCa were to be replaced. More correctly, this is how a modified ITT population is defined; however, we referred to this population as to the ITT population.

Subject analysis set title	Per protocol
----------------------------	--------------

Subject analysis set type	Per protocol
---------------------------	--------------

Subject analysis set description:

The per protocol (PP) population consisted of all randomized patients who received at least 3 cycles of ChT and, for treatment group A, 8 doses of DCVAC/OvCa, did not violate any inclusion criteria, and did not have any major protocol deviations. Before database lock, all protocol deviations were reviewed, and for each patient it was determined whether he belonged to the PP population or not.

upper limit	1.39

### Secondary: Immune response

End point title	Immune response
-----------------	-----------------

---

**End point description:**

The relationship between i) baseline levels of antibodies and T lymphocytes specific to NY-ESO-1 and MAGE-A1 and ii) the clinical endpoints progression-free survival and overall survival was explored by using a Cox proportional hazard regression model. This analysis did not indicate any statistically significant link between baseline levels of the immune parameters and the clinical endpoints.

The relationship between the levels of antibodies and T lymphocytes specific to NY-ESO-1 and MAGE-A1 after DCVAC/OvCa administration and the clinical endpoints progression-free survival and overall survival was explored by a case-by-case review of patients' data. A correlation between the immune response after DCVAC/OvCa administration and the clinical endpoints was observed in 2 patients.

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

From the study treatment start date/time to 30 days after the last dose of study treatment (DCVAC/OvCa or chemotherapy). Only 1 occurrence per patient per System Organ Class and Preferred Term is counted. PD-related AEs were not reportable per protocol.

Adverse event reporting additional description:

AEs were reported until 30 days after the last administration of DCVAC/OvCa (treatment group A) and until 30 days after the last dose of chemotherapy (treatment group B). Therefore, the reporting period differed significantly between the treatment groups (median duration 360 days in treatment group A and 150 days in treatment group B).

Assessment type	Systematic

occurrences (all)	2	1	

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
20 August 2013	Specification of the application site (groin and axillary areas) for DCVAC/OvCa; specification of ChT toxicity management based on institutional standards or applicable national/European oncology guidelines; specification of pretreatment assessment of infection markers, if required by local/national regulations; correction of scheduling the leukapheresis procedure and prolongation of the time frame for the transport of the cells harvested during the leukapheresis procedure to the processing facility; specification of time points of the follow-up clinic visits and CA125 assessment.
21 November 2013	Specification of methods of contraception (exclusion criterion 13); added justification of the DCVAC/OvCa dose; added definition of slow progressive disease; added information about continuation of DCVAC/OvCa administration after disease progression; specification that not only the medications must be recorded, but the doses taken/administered as well; added information regarding using a historical heart and lung X ray scan obtained prior to study entry; specification of the exclusion criterion 6 (previous or concurrent radiotherapy to the abdomen and pelvis).
24 February 2014	Prolongation of screening period from originally up to 2 weeks to up to 4 weeks; specification of the follow-up period including definition of the EoT visit, efficacy follow-up, and survival follow up; specification of methods of contraception (exclusion criterion 13); change of inclusion criterion 3 (radiologically confirmed relapse after >6 months of remission (Pt-sensitive patients) to be found instead of originally up to 2 to up to 4 weeks prior to study entry); changed the AE reporting period; definition and collection of SADRs; added determination of the sample size; added specification for patients' replacement.
20 May 2014	Change in randomization (to be performed within 4 weeks after screening instead of 2 weeks after screening); change in inclusion criteria 2 and 10 and in exclusion criteria 1 and 2; chest X-ray may be replaced by CT of thorax at the investigator's decision; central reading no longer needed for evaluation of a patient's eligibility; specification that pregnant women must pass the EoT visit; correction in follow-up procedures in the Schedule of assessments; an independent blinded radiologist to evaluate CT/MRI scans for sensitivity analyses of PFS and ORR.
02 August 2016	<p>Prolongation of the overall study duration by approximately 2 years as caused by extension of survival follow-up; the study is to be terminated after a sufficient number of events have been observed to evaluate mature OS. The main goal is that at least 50% of the total evaluable patients should have had a survival event. However, longer survival follow-up can be decided if deemed medically/statistically appropriate at the time of reaching the median survival (for the total group of patients in the study, i.e., without any separate study arm analysis). The item will be discussed with the trial SC (main investigators from the clinical trials SOV01, SOV02, SOV03, and a representative for the Polish sites) and the trial DMC for their recommendation to the sponsor regarding the length of the survival follow-up.</p> <p>Change in the frequency of telephone contacts during the survival follow-up period from 12 weeks to 6 months.</p> <p>Central reading of CT/MRI scans is to be considered only in case of a positive outcome of the analyses of the local evaluations or in case of a deemed need for health authority interactions.</p> <p>Addition of information on pharmacogenomics studies on research samples, which is relevant only for the Czech Republic (for operational reasons). (Pharmacogenomics research was approved as an addendum to the Protocol, version 4.1, in the Czech Republic. The sponsor added the already approved wording to the relevant part of the Protocol).</p>

### **Interruptions (globally)**

Were there any global interruptions to the trial? No

### **Limitations and caveats**

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

None reported
