

Clinical trial results:

An open-label Extended Clinical Protocol of ranibizumab to evaluate Safety and Efficacy in rare VEGF driven ocular diseases

Summary

EudraCT number	2013-001421-55
Trial protocol	FR
Global end of trial date	13 May 2016

Results information

Result version number	v1 (current)
This version publication date	25 May 2017
First version publication date	25 May 2017

Trial information

Trial identification

Sponsor protocol code	CRFB002GFR02
-----------------------	--------------

Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT01908816
WHO universal trial number (UTN)	-

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	13 May 2016
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	13 May 2016
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

The primary objective was to evaluate the 2-year safety of ranibizumab as assessed by type, rate and severity of serious and non-serious, ocular and non-ocular, adverse events

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and the International Conference on Harmonization (ICH) Good Clinical Practice (GCP) guidelines. All the local regulatory requirements pertinent to safety of trial subjects were also followed during the conduct of the trial.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	26 September 2013
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	France: 270
Worldwide total number of subjects	270
EEA total number of subjects	270

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	153
From 65 to 84 years	106
85 years and over	11

Subject disposition

Recruitment

Recruitment details:

open-label, single arm study evaluating the safety of 0.5 mg ranibizumab. Patients received individualized ranibizumab intravitreal injections based on evidence of disease activity. The study was early terminated due to low recruitment that hampered to address the primary endpoint of the study

Pre-assignment

Screening details:

A total of 196 patients completed the visit at Month 3 (M3), 127 completed the visit at M12 and 16 at M24. Due to the early termination of the study no patient completed the planned visit at M36. The mean time to premature discontinuation was 11.2 months, that encompasses the time between the first injection and the study discontinuation

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	CNV (Choroidal Neovascularization)

Arm description:

All patients received 0.5 mg ranibizumab IVT injection

Arm type	Experimental
Investigational medicinal product name	ranibizumab 0.5 mg
Investigational medicinal product code	RFB002
Other name	Lucentis
Pharmaceutical forms	Intravesical solution/solution for injection
Routes of administration	Intravitreal use

Dosage and administration details:

0.5mg

Arm title	ME (Macular Edema)
------------------	--------------------

Arm description:

All patients received 0.5 mg ranibizumab IVT injection

Arm type	Experimental
Investigational medicinal product name	Ranibizumab 0.5 mg)
Investigational medicinal product code	RFB002
Other name	Lucentis®
Pharmaceutical forms	Intravesical solution/solution for injection
Routes of administration	Intracervical use

Dosage and administration details:

0.5mg

Arm title	RI/NVG (Rubeosis Iridis and Neovascular Glaucoma)
------------------	---

Arm description:

All patients received 0.5 mg ranibizumab IVT injection

Arm type	Experimental
----------	--------------

Investigational medicinal product name	Ranibizumab 0.5 mg)
Investigational medicinal product code	RFB002
Other name	Lucentis
Pharmaceutical forms	Intravesical solution
Routes of administration	Intravitreal use
Dosage and administration details:	
0.5mg	
Arm title	PDR/V

Arm description:

(Proliferative Diabetic Retinopathy requiring Vitrectomy). All patients received 0.5 mg ranibizumab IVT injection

Arm type	Experimental
Investigational medicinal product name	Ranibizumab 0.5 mg
Investigational medicinal product code	RFB002
Other name	Lucentis
Pharmaceutical forms	Intravesical solution/solution for injection
Routes of administration	Intravitreal use

Dosage and administration details:

0.5mg

Units: Participants				
Non- serious adverse events	2	21	1	0
Serious adverse events	11	15	31	14
Death	1	0	7	1

Statistical analyses

No statistical analyses for this end point

Secondary: Change from baseline Best Corrected Visual Acuity (BCVA) for patients with Choroidal Neovascularization (CNV) and Macular Edema (ME)

End point title	Change from baseline Best Corrected Visual Acuity (BCVA) for patients with Choroidal Neovascularization (CNV) and Macular Edema (ME) ^[2]
-----------------	---

End point description:

BCVA will be tested using the ETDRS, the Snellen or Monoyer scales. VA measurements will be preferentially taken in a sitting position at an initial test distance of 4 meters using ETDRS charts. The overall BCVA score will be calculated using the BCVA worksheet which will be kept in the source data and the score will be recorded in the eCRF. ETDRS, Snellen and Monoyer VA measurements will be transformed in logMAR to be analyzed.

End point type	Secondary
----------------	-----------

End point timeframe:

3 months, 12 months

Notes:

[2] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: Due to early termination, no statistical analysis was planned for this endpoint

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Adverse events are collected from First Patient First Visit (FPFV) until Last Patient Last Visit (LPLV). All adverse events reported in this record are from date of First Patient First Treatment until Last Patient Last Visit

Adverse event reporting additional description:

Consistent with EudraCT disclosure specifications, Novartis has reported under the Serious adverse events field "number of deaths resulting from adverse events" all those deaths, resulting from serious adverse events that are deemed to be causally related to treatment by the investigator.

Assessment type	Systematic

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
11 June 2013	due to several modifications in this version, the ethic committees asked for a new version of the protocol, with corrections highlighted. This version was used at the beginning of the project
16 December 2013	the wording of the inclusion criterion n°2 was changed from "Patient with diagnosis of active choroidal neovascularization (CNV) secondary to any causes (except wAMD, PM and PXE), involving the center of the fovea, confirmed by complete ocular examination of the study eye" to "Patient with diagnosis of active choroidal neovascularization (CNV) secondary to any causes (except wAMD, PM and PXE), involving the center of the macula, confirmed by complete ocular examination of the study eye". This version V5 was issued after 13 patients had been recruited.
05 February 2014	this modification of the protocol authorized the investigators to use of the data of ophthalmic examinations present in the medical record of the patient when these examinations were realized within 14 days before the visit of selection (V1), if the patient was eligible. This modification was implemented to avoid the repetition of potentially invasive ophthalmological examination (e.g. angiography) if already performed recently. This decreased the number of ophthalmologic examinations for as they were not necessary from a medical perspective.
28 May 2015	this amendment was issued to collect additional safety and efficacy data from year 2 to year 3 in patients treated with ranibizumab for rare ocular VEGF-driven diseases. This one-year extension of the study would also respond to an unmet medical need for licensed therapies that could be used to treat rare ocular VEGF-driven diseases affecting visual function. Indeed, extending the follow-up allowed treating with ranibizumab patients with such diseases. Consistently, changes related to this one-year extension were done throughout the protocol (e.g., additional secondary objectives, analysis of additional secondary variables).

31 August 2015	<p>this amendment was issued to provide clarifications about assessing and treating the patients. These clarifications (listed below) primarily provided more details about the administration of treatment and the assessment of visual acuity :</p> <ul style="list-style-type: none"> - Change to Instructions for prescribing and taking study treatment (section 5.5.4): clarification that the interval between 2 ranibizumab injections should not been shorter than 28 days. - Changes to Patient demographics/other baseline characteristics (section 6.2): clarification that day of birth was recorded in the eCRF. - Changes to Best-corrected visual acuity (BCVA) (section 6.4.1): clarification that an ETDRS BCVA assessment could be performed at 2 meters. "If the ETDRS BCVA measurement was performed at 2 meters instead of 4 meters (using 4 meters ETDRS scales), a correction was applied by removing 15 letters (3 lines) to the ETDRS score obtained at 2 meters." - Changes to Informed consent (section 11.2): clarification that it was not the responsibility of the investigator to submit informed consent form for CPP approval. <p>These changes of protocol were not considered to have an impact on the study population or on the patients' safety.</p>
----------------	--

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

As the study was early terminated, no conclusion could be drawn from this study. The data should be interpreted with cautious as less than half of the patients included in the study (47.0%) completed the visit at Month 12.

Notes:
