

Clinical trial results:

A multicentre, comparative, randomised, double-blind, double-dummy clinical trial on the efficacy and safety of Condrosulf® versus Celebrex® and versus a placebo in the treatment of knee osteoarthritis

Summary

EudraCT number	2013-001619-62
Trial protocol	IT BE CZ PL
Global end of trial date	19 October 2015

Results information

Result version number	v1 (current)
This version publication date	06 May 2022
First version publication date	06 May 2022
Summary attachment (see zip file)	annrheumdis-2016-210860.full (annrheumdis-2016-210860.full.pdf)

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	06 June 2016
Is this the analysis of the primary completion data?	Yes
Primary completion date	19 October 2015
Global end of trial reached?	Yes
Global end of trial date	19 October 2015
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

assess the superiority of Condrosulf 800 mg once daily versus placebo for 182 days. Celebrex will be used as active control. The primary endpoints will be a change in the Lequesne algo-functional index and a change in the VAS from day 1 to day 182

Protection of trial subjects:

Patients have rescue medication available in case of uncontrolled pain.

Patients can stop the study at any time.

Background therapy: -

Evidence for comparator:

Celebrex® 200 mg (celecoxib) was used as active comparator.

Actual start date of recruitment	12 June 2014
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Poland: 493
Country: Number of subjects enrolled	Belgium: 18
Country: Number of subjects enrolled	Czechia: 74
Country: Number of subjects enrolled	Italy: 1
Country: Number of subjects enrolled	Switzerland: 17
Worldwide total number of subjects	603
EEA total number of subjects	586

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0

Adults (18-64 years)	276
From 65 to 84 years	325
85 years and over	2

Subject disposition

Recruitment

Recruitment details:

The study was conducted in 16 centres in 5 European countries (1 in Belgium, 3 in Switzerland, 1 in Italy, 5 in Poland and 6 in Czech Republic).

First patient enrolled: 12 June 2014; Last patient completed: 19 October 2015

Pre-assignment

Screening details:

656 patients have been screened of which 52 Screening failure.

604 patients have been randomized. Of these, 505 patients completed the study and 99 interrupted it prematurely

Period 1

Period 1 title	Trial period (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Blinding implementation details:

The realization of the double-blind, double dummy design was made possible by the production of matched placebo tablets and capsules that were identical to the active product Condrosulf and to the overencapsulated Celebrex, respectively, in terms of size, shape, colour and method of administration.

Arms

Are arms mutually exclusive?	Yes
Arm title	Condrosulf

Arm description:

Group 1: one tablet of Condrosulf® 800 mg and 1 capsule of Placebo of Celebrex®, once a day by oral route.

Arm type	Experimental
Investigational medicinal product name	Condrosulf® 800 mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

One tablet of Condrosulf® 800 mg once a day by oral route.

Being a double dummy study the patient also took 1 capsule of Placebo of Celebrex®, once a day by oral route

Tablets and capsules had to be swallowed whole with a glass of water without chewing them.

Arm title	Celebrex® 200 mg
------------------	------------------

Arm description:

Group 2: One tablet of Placebo of Condrosulf® and 1 capsule of Celebrex® 200 mg, once a day by oral route

Arm type	Active comparator
Investigational medicinal product name	Celebrex®
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

1 capsule of Celebrex® 200 mg, once a day by oral route;

Being it a double dummy study, the patient also took one tablet of Placebo of Condrosulf® , once a day by oral route;

Tablets and capsules had to be swallowed whole with a glass of water without chewing them.

Arm title	Placebo
------------------	---------

Arm description:

Group 3: one tablet of Placebo of Condrosulf® and 1 capsule of Placebo of Celebrex®, once a day by oral route.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet, Capsule
Routes of administration	Oral use

Dosage and administration details:

Patient take one tablet of Placebo of Condrosulf® and 1 capsule of Placebo of Celebrex®, once a day by oral route.

Tablets and capsules had to be swallowed whole with a glass of water without chewing them.

Number of subjects in period 1	Condrosulf	Celebrex® 200 mg	Placebo

lower limit	-0.998
upper limit	-0.051

Notes:

[1] - Analysis is based on an analysis of covariance model with mean change from baseline in the LEQUENE INDEX SCORE at visit 2 as dependent variable, treatment and centre as fixed effect and baseline as covariate. BOCF = baseline observation carried forward; LOCF = last observation carried forward. Missing values at the each visit have been replaced using the BOCF method.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
26 March 2014	One substantial protocol amendment was issued on 26 March 2014. The original protocol already excluded patients with cardiovascular risks. Following the Belgian IEC request, the protocol amendment was submitted to better reflect the cardiovascular and non-cardiovascular contraindications listed in the package leaflet for Celebrex, and to better ensure that patients with any risk of adverse events potentially related with the treatment with celecoxib would have been excluded from trial participation, including those with a history of heart attack, ischemic heart disease or cerebrovascular disease (including transient ischemic attacks) or those having or having had peripheral arterial disease or past surgery of peripheral arteries.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
