General information about the trial

Main objective of the trial:

Safir 02 Lung was an open-label multicentric randomized phase II trial, using high throughput genome analysis as a therapeutic decision tool, aimed at comparing a targeted treatment administered according to identified molecular anomalies of the tumor with a standard maintenance as per guidelines (targeted substudy 1: Arm A1 and B1) as well as immunotherapy versus maintenance therapy in patients without actionable genomic alterations or non eligible to substudy 1 (immune substudy 2: Arm A2 and B2).

The main objective was to evaluate whether treatment with targeted agents guided by high throughput molecular analyses (CGH array, next generation sequencing) improves overall progression-free survival as compared to standard maintenance therapy in patients with metastatic NSCLC (primary objective of substudy 1).

Protection of trial subjects:

The clinical trial was conducted in accordance with:

- the principles of ethics as stated in the last version in use of the Declaration of Helsinki,
- the Good Clinical Practices (GCP) defined by the International Conference on Harmonization (ICH-E6, 17/07/96),
- the European directive 2001/20/CE on the conduct of clinical trials,

- the law on 'informatics and freedom' (Informatique et Libertés n° 78-17) of January 6th, 1978 modified by the law n° 2004-801 of August 6th, 2004 relative to the protection of persons with regard to the computerized processing of personal data,
