Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	25 May 2020
Is this the analysis of the primary completion data?	Yes
Primary completion date	26 November 2019
Global end of trial reached?	Yes
Global end of trial date	26 November 2019
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To determine whether early discharge and out-of-hospital treatment of patients with low-risk acute PE (as defined by the inclusion and exclusion criteria) with the new oral factor Xa inhibitor rivaroxaban is feasible, effective, and safe.

Protection of trial subjects:

N/A

Background therapy:

This is a single-arm trial

Evidence for comparator:

N/A

Actual start date of recruitment	27 May 2014
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Netherlands: 16
Country: Number of subjects enrolled	Portugal: 17
Country: Number of subjects enrolled	Spain: 29
Country: Number of subjects enrolled	Finland: 28
Country: Number of subjects enrolled	Germany: 339
Country: Number of subjects enrolled	Greece: 12
Country: Number of subjects enrolled	Italy: 135
Worldwide total number of subjects	576
EEA total number of subjects	576

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23	0

months)	
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	359
From 65 to 84 years	206
85 years and over	11

Subject disposition

Recruitment

Recruitment details:

Date of first enrolment: 27.05.2014

Date of last enrolment: 27.11.2018

Pre-assignment

Screening details:

2,854 patients diagnosed with acute PE were screened for enrolment at 49 centres in 7 European countries.

Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

Arms

Arm title	Treatment arm
------------------	---------------

Arm description:

This is a single-arm trial.

Arm type	Experimental
Investigational medicinal product name	Substance name: Rivaroxaban
Investigational medicinal product code	ATC code: B01AF01
Other name	Brand name: Xarelto
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Patients received 15 mg rivaroxaban twice daily for the first 3 weeks, followed by 20 mg once daily for the duration of the study, but for no less than 3 months.

Number of subjects in period 1	Treatment arm
Started	576
Completed	554
Not completed	22
Adverse event, serious fatal	3
Physician decision	5
Consent withdrawn by subject	4
Adverse event, non-fatal	4
Excluded medication	1
Administrative/regulatory reasons	1
Lost to follow-up	4

Baseline characteristics

No statistical analyses for this end point

Other pre-specified: Serious adverse events (SAEs)

End point title	Serious adverse events (SAEs)
End point description:	
End point type	Other pre-specified
End point timeframe:	Within 3 months of enrolment

End point values	Treatment arm	Safety population		
Subject group type	Reporting group	Subject analysis set		
Number of subjects analysed	576	569		
Units: events	68	68		

Statistical analyses

Statistical analysis title	Safety outcome analysis
Statistical analysis description:	
Safety analysis was conducted in the safety population, including all patients who received at least one dose of study drug. Absolute (N) and relative (%) frequencies and Kaplan-Meier curves including a table with the number of patients under risk were calculated.	
Comparison groups	Treatment arm v Safety population
Number of subjects included in analysis	1145
Analysis specification	Pre-specified
Analysis type	non-inferiority
P-value	< 0.0001 ^[1]
Method	Binomial test (1-sided)
Parameter estimate	absolute risk
Point estimate	0.52
Confidence interval	
level	95 %
sides	1-sided
upper limit	1.34
Variability estimate	Standard error of the mean
Dispersion value	0.3

Notes:

[1] - The primary efficacy endpoint (symptomatic recurrent venous thromboembolism [VTE] or death related to pulmonary embolism within 3 months after enrolment) is a safety endpoint, therefore the corresponding test from the main analysis is reported here.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

From the time the subject has signed the informed consent document up to 3 months after enrolment (Visit 4)

Adverse event reporting additional description:

If the investigator detects a serious adverse event in a trial subject after the end of the period of observation, and considers the event possibly related to the prior trial, he should contact the Sponsor to determine how the adverse event should be documented and reported.

Assessment type	Non-systematic

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
20 September 2013	<p>Inclusion Criterion no. 4: Acceptable method of contraception for fertile women updated to not recommend the use of hormone-based contraceptives and to request the performance of a pregnancy test in case menstruation is delayed during therapy. Reason: hormonal contraception is not suitable for women with a history of DVT / PE</p> <p>Inclusion Criteria - Additional Criterion no. 6: Absence of right ventricular (RV) enlargement or dysfunction, and of free floating thrombi in the right atrium or right ventricle, detected by echocardiography or on computed tomography. [with definitions]</p> <p>Exclusion Criteria – Removal of Criterion no. 6: Right ventricular (RV) enlargement or dysfunction, or free floating thrombi in the right atrium or right ventricle, detected by echocardiography or on computed tomography. Reason: To emphasize that right ventricular function must be properly assessed by either CT or echocardiography</p> <p>Exclusion Criterion no. 14: specified that GFR should be calculated by the MDRD formula Reason: To assure that the calculation of GFR is done in the same manner across all study sites</p> <p>Change of procedures for collecting data gathered with patient questionnaires Reason: A more safe and streamlined process has been agreed upon to assure that this data is being collected.</p>
24 June 2014	<p>Trial Schedule, Visit 2: Time window re-specified to say Day 7-11 Reason: To allow for scheduling of telephone interviews around weekends and bank holidays</p> <p>3.6.2 Exclusion criterion no. 6: Rewording of text on limits for pre-treatment of index episode with anticoagulants</p> <p>3.6.2 Exclusion criterion no. 7: Rewording of text on concurrent anticoagulation treatment for previous indications Reason: Previous text was confusing, partly incorrect and difficult to interpret at study sites.</p> <p>4.1.4 Dosage Schedule, 1st Para.: Rewording of text to align with the changes in Excl. Criteria 6 and 7</p>

09 November 2015	<p>Number of sites has been changed to 40-50 not only in Germany but in Europe. Reason: The recruitment rate in Germany remain very stable, indicating that an increase in recruitment rate is not possible among German sites.</p> <p>Trial Schedule:</p> <ul style="list-style-type: none"> - The Computer Assisted Telephone Interview (CATI) is done with patients recruited at German sites only. In other countries, a structured telephone call to the patients will be made by the respective study group. <p>Reason: An operational computerized system is not available in the foreseen non-German countries. The contact with patients will be ensured by phone calls by the site's study team</p> <ul style="list-style-type: none"> - Utilization of health care resources will be assessed in German patients only. <p>Reason: There is no good model available to compare or co-analyze health costs across national health care systems.</p> <p>Duration of the trial has been changed from 28 to 60 months.</p> <p>Reason: A lower than anticipated recruitment rate</p> <p>Inclusion Criterion 6: Absence of right ventricular (RV) enlargement or dysfunction, and of free floating thrombi in the right atrium or right ventricle on echocardiography or computed tomography.</p> <p>In the amendment, RV dysfunction is absent on echocardiography when both criteria listed below are met:</p> <ul style="list-style-type: none"> - Right/left ventricular end-diastolic diameter ratio < 0.9 (apical or subcostal 4-chamber view) - No paradoxical motion of the interventricular septum. <p>The remaining echocardiographic criteria have been deleted.</p> <p>Reason: Based on updated Recommendations for Cardiac Chamber Quantification in Adults by the American Society of Echocardiography and the European Society of Cardiovascular Imaging in 2015, all outdated or controversial criteria of RV dysfunction were deleted and only the "simple" criterion, validated in the most recent pulmonary embolism trials , i.e. right/left ventricular end-diastolic diameter ratio < 0.9, is kept.</p>
