Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	11 November 2019
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	11 November 2019
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To evaluate safety and efficacy of two adalimumab dosing regimens for induction and maintenance (standard and higher dosing) in achieving clinical remission in subjects with moderately to severely active ulcerative colitis.

Protection of trial subjects:

Subject and/or legal guardian read and understood the information provided about the study and gave written permission.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	27 March 2014
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Austria: 30
Country: Number of subjects enrolled	Belgium: 9
Country: Number of subjects enrolled	Canada: 71
Country: Number of subjects enrolled	Czech Republic: 3
Country: Number of subjects enrolled	Denmark: 3
Country: Number of subjects enrolled	France: 42
Country: Number of subjects enrolled	Germany: 21
Country: Number of subjects enrolled	Hungary: 12
Country: Number of subjects enrolled	Israel: 23
Country: Number of subjects enrolled	Italy: 67
Country: Number of subjects enrolled	Japan: 100
Country: Number of subjects enrolled	Netherlands: 15
Country: Number of subjects enrolled	Poland: 236
Country: Number of subjects enrolled	Romania: 5
Country: Number of subjects enrolled	Slovakia: 4
Country: Number of subjects enrolled	Spain: 20
Country: Number of subjects enrolled	Switzerland: 5
Country: Number of subjects enrolled	Ukraine: 75
Country: Number of subjects enrolled	United Kingdom: 33
Country: Number of subjects enrolled	United States: 178

Worldwide total number of subjects	952
EEA total number of subjects	500

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	914
From 65 to 84 years	38
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

This study included a Main Study (120 sites in 19 countries) and a Japan Sub-Study (22 sites in Japan).

After a 3-week screening period, participants were randomized 3:2 to an 8-week double-blind (DB) Induction Period with 2 adalimumab dosing regimens (Induction Standard Dose [I-SD] or Induction Higher Dose [I-HD]).

Pre-assignment

Screening details:

At Week 8, participants in Main Study were re-randomized (2:2:1) into 44-week DB Maintenance Period with 3 adalimumab dosing regimens (M-SD, M-HD, or an exploratory Therapeutic Drug Monitoring [TDM] Regimen). Participants in Japan Sub-study were re-randomized (1:1) into 44-week DB Maintenance Period with 2 adalimumab dosing regimens (M-SD, M-HD).

Period 1

Period 1 title	Induction Study
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor

Blinding implementation details:

All AbbVie personnel with direct oversight of the conduct and management of the trial (with the exception of the AbbVie Drug Supply Management Team) the Investigator, study site personnel and the subject will remain blinded to each subject's treatment throughout the blinded period of the study.

Arms

Are arms mutually exclusive?	Yes
Arm title	Induction (Main Study + Japan Substudy): I-SD

Arm description:

Induction Standard Dose (I-SD): Double-blind adalimumab regimen of 160 mg at Week 0 followed by 80 mg at Week 2, 40 mg at Week 4, and 40 mg at Week 6.

Arm type	Experimental
Investigational medicinal product name	adalimumab
Investigational medicinal product code	
Other name	Humira
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Double-blind adalimumab regimen of 160 mg at Week 0 followed by 80 mg at Week 2, 40 mg at Week 4, and 40 mg at Week 6.

Investigational medicinal product name	placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

In order to retain blinding, all subjects in the Standard Induction Dose Regimen will receive matching placebo injections in addition to the adalimumab injection at Weeks 1, 2 and 3.

Arm title	Induction (Main Study + Japan Substudy): I-HD
------------------	---

Arm description:

Induction Higher Dose (I-HD): Double-blind adalimumab regimen of 160 mg at Weeks 0, 1, 2, and 3 followed by 40 mg at Week 4 and 40 mg at Week 6.

Arm type	Experimental
Investigational medicinal product name	adalimumab
Investigational medicinal product code	
Other name	Humira
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Double-blind adalimumab regimen of 160 mg at Weeks 0, 1, 2, and 3 followed by 40 mg at Week 4 and 40 mg at Week 6.

Number of subjects in period 1	Induction (Main Study + Japan Substudy): I-SD	Induction (Main Study + Japan Substudy): I-HD
Started	379	573
Enrolled in Main Study	340	512 ^[1]
Enrolled in Japan Sub-Study	39 ^[2]	61 ^[3]
Completed	332	514
Not completed	47	59
Adverse event	13	19
Requires Alternative/ Prohibited Therapy	4	5
Subject Noncompliance	1	1
Lost to follow-up	1	-
Lack of efficacy	22	27
Withdrawal by subject	3	5
Other, Not Specified	3	2

Notes:

[1] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: Enrolled in Main Study

[2] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: Enrolled in Japan Sub-Study

[3] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: Enrolled in Japan Sub-Study

Period 2

Period 2 title	Maintenance Study
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor

Blinding implementation details:

All AbbVie personally with direct oversight of the conduct and management of the trial (with the exception of the AbbVie Drug Supply Management Team) the Investigator, study site personnel and the subject remained blinded to each subject's treatment throughout the blinded period of the study.

Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

Arm title	Maintenance (Main Study + Japan Sub-study): M-SD
------------------	--

Arm description:

Maintenance Standard Dose (M-SD): Double-blind adalimumab 40 mg every other week (eow), for 44 weeks.

Arm type	Experimental
Investigational medicinal product name	adalimumab
Investigational medicinal product code	
Other name	Humira
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Double-blind adalimumab 40 mg every other week (eow), for 44 weeks.

Investigational medicinal product name	placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Matching Placebo was administered every other week, starting at Week 9 until Week 51.

Arm title	Maintenance (Main Study + Japan Sub-study): M-HD
------------------	--

Arm description:

Maintenance Higher Dose (M-HD): Double-blind adalimumab 40 mg every week (ew) for 44 weeks.

Arm type	Experimental
Investigational medicinal product name	adalimumab
Investigational medicinal product code	
Other name	Humira
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Double-blind adalimumab 40 mg every week (ew) for 44 weeks.

Arm title	Maintenance (Main Study): TDM Regimen
------------------	---------------------------------------

Arm description:

Exploratory Therapeutic Drug Monitoring (TDM) Regimen: Double-blind adalimumab 40 mg eow at Week 8 and Week 10, with possible dose adjustments at Weeks 12, 24, and 37 based on criteria assessing blinded adalimumab serum concentration and rectal bleeding subscore assessments. Per protocol, the TDM Regimen arm was used to analyze exploratory outcome measures only.

Arm type	Experimental
Investigational medicinal product name	adalimumab
Investigational medicinal product code	
Other name	Humira
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Double-blind adalimumab 40 mg eow at Week 8 and Week 10, with possible dose adjustments at Weeks 12, 24, and 37 based on criteria assessing blinded adalimumab serum concentration and rectal bleeding subscore assessments.

Investigational medicinal product name	placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection

Routes of administration	Subcutaneous use
--------------------------	------------------

Dosage and administration details:

In order to retain blinding, all subjects in the TDM Regimen will receive matching placebo injections in addition to the adalimumab injection at Weeks 9 and 11.

Number of subjects in period 2	Maintenance (Main Study + Japan Sub-study): M-SD	Maintenance (Main Study + Japan Sub-study): M-HD	Maintenance (Main Study): TDM Regimen
Started	345	350	151
Completed	221	246	105

Full Mayo Score (FMS)			

The Mayo score is a tool designed to measure disease activity for ulcerative colitis. The FMS ranges from 0 (normal or inactive disease) to 12 (severe disease) and is calculated as the sum of 4 subscores (stool frequency, rectal bleeding, endoscopy, and physician's global assessment), each of which ranges from 0 (normal) to 3 (severe disease).

Measure Analysis Population Description: participants with an assessment (n=379, 570)

Units: units on a scale

End point description:

The Mayo score is a tool designed to measure disease activity for ulcerative colitis. The FMS ranges from 0 (normal or inactive disease) to 12 (severe disease) and is calculated as the sum of 4 subscores (stool frequency, rectal bleeding, endoscopy [confirmed by a central reader], and physician's global assessment), each of which ranges from 0 (normal) to 3 (severe disease). Negative changes indicate improvement. Week 8 responders (per FMS) are defined as participants with a decrease in Full Mayo score of ≥ 3 points and $\geq 30\%$ from Baseline plus a decrease from baseline in the rectal bleeding subscore (RBS) ≥ 1 or an absolute RBS ≤ 1 . Clinical remission per FMS is defined as Mayo Score ≤ 2 and no individual subscore > 1 .

ITT-Responder population (I-ITT-RP): all participants in the Induction ITT population who achieve Week 8 response based on the FMS utilizing the endoscopy subscore provided by the central reader. Non-responder imputation.

Secondary: Induction Period Ranked Secondary Endpoint 4: Percentage of Participants With Clinical Response Per FMS at Week 8

End point title	Induction Period Ranked Secondary Endpoint 4: Percentage of Participants With Clinical Response Per FMS at Week 8
-----------------	---

End point description:

The Mayo score is a tool designed to measure disease activity for ulcerative colitis. The FMS ranges from 0 (normal or inactive disease) to 12 (severe disease) and is calculated as the sum of 4 subscores (stool frequency, rectal bleeding, endoscopy [confirmed by a central reader], and physician's global assessment), each of which ranges from 0 (normal) to 3 (severe disease). Negative changes indicate improvement. Clinical response is defined as a decrease in FMS of ≥ 3 points and $\geq 30\%$ from baseline, plus a decrease in the rectal bleeding subscore (RBS) ≥ 1 or an absolute RBS ≤ 1 .

Statistical analyses

Statistical analysis title	Statistical Analysis 1
Statistical analysis description:	
Adjusted risk difference, 95% confidence interval for the difference in the proportions between the treatment groups and P-value were calculated using Cochran-Mantel-Haenszel (CMH) test adjusted for induction treatment regimen and week 8 remission status.	
Comparison groups	Maintenance (Main Study): M-SD v Maintenance (Main Study): M-HD
Number of subjects included in analysis	297
Analysis specification	Pre-specified
Analysis type	superiority
P-value	= 0.207
Method	Cochran-Mantel-Haenszel
Parameter estimate	Adjusted risk difference
Point estimate	7.3
Confidence interval	
level	95 %
sides	2-sided
lower limit	-4
upper limit	18.6

Statistical analysis title	Statistical Analysis 2
Statistical analysis description:	
Adjusted risk difference, 95% confidence interval for the difference in the proportions between the treatment groups and P-value were calculated using Cochran-Mantel-Haenszel (CMH) test adjusted for induction treatment regimen and week 8 remission status.	
Comparison groups	Maintenance (Main Study + Japan Sub-study): M-SD v Maintenance (Main Study + Japan Sub-study): M-HD
Number of subjects included in analysis	338
Analysis specification	Pre-specified
Analysis type	superiority
P-value	= 0.44
Method	Cochran-Mantel-Haenszel
Parameter estimate	Adjusted risk difference
Point estimate	4.2
Confidence interval	
level	95 %
sides	2-sided
lower limit	-6.4
upper limit	14.8

Adverse events

Adverse events information

Timeframe for reporting adverse events:

See time frame specifics detailed for each reporting group in their respective descriptions below.
Treatment-emergent adverse events (TEAEs) are presented.

Adverse event reporting additional description:

Participants were contacted 70 days following study drug discontinuation for an assessment of any new or ongoing adverse events, except those participants who continued on adalimumab therapy after the end of study participation.

Assessment type	Systematic

Reporting groups

Reporting group title	Induction (Main Study + Japan Substudy): I-SD
-----------------------	---

Reporting group description:

Induction Standard Dose: Double-blind adalimumab regimen of 160 mg at Week 0 followed by 80 mg at Week 2, 40 mg at Week 4, and 40 mg at Week 6.

TEAEs during induction period: events with an onset date on or after first dose date of study drug in induction period and up to 70 days after last dose date of the study drug in induction period and prior to first dose date of study drug in maintenance period. Mean duration of treatment was 57.5 days.

Reporting group title	Induction (Main Study + Japan Substudy): I-HD
-----------------------	---

Reporting group description:

Induction Higher Dose: Double-blind adalimumab regimen of 160 mg at Weeks 0, 1, 2, and 3 followed by 40 mg at Week 4 and 40 mg at Week 6.

TEAEs during induction period: events with an onset date on or after first dose date of study drug in induction period and up to 70 days after last dose date of the study drug in induction period and prior to first dose date of study drug in maintenance period. Mean duration of treatment was 55.0 days.

Reporting group title	Maintenance (Main Study + Japan Sub-study): M-SD
-----------------------	--

Reporting group description:

Maintenance Standard Dose: Double-blind adalimumab 40 mg every other week (eow), for 44 weeks.

TEAEs during maintenance period: events with an onset date on or after first dose date of study drug in maintenance period and up to 70 days after the last dose date of the study drug in maintenance period. Mean duration of treatment was 251.5 days.

Reporting group title	Maintenance (Main Study + Japan Sub-study): M-HD
-----------------------	--

Reporting group description:

Maintenance Higher Dose: Double-blind adalimumab 40 mg every week (ew) for 44 weeks.

TEAEs during maintenance period: events with an onset date on or after first dose date of study drug in maintenance period and up to 70 days after the last dose date of the study drug in maintenance period. Mean duration of treatment was 263.1 days.

Reporting group title	Maintenance (Main Study): TDM Regimen
-----------------------	---------------------------------------

Reporting group description:

Double-blind adalimumab 40 mg eow at Week 8 and Week 10, with possible dose adjustments at Weeks 12, 24, and 37 based on criteria assessing blinded adalimumab serum concentration and rectal bleeding subscore (RBS) assessments.

TEAEs during maintenance period: events with an onset date on or after first dose date of study drug in maintenance period and up to 70 days after the last dose date of the study drug in maintenance period. Mean duration of treatment was 255.9 days.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
02 June 2014	Major changes included: updated the Study Designated Physician and contact information, clarified reference to the rectal bleeding subscore; updated biopsy language and clarified endoscopy to be colonoscopy or flexible sigmoidoscopy; added restratification details; updated inclusion criteria (IC) 4 to clarify methotrexate usage for entry into the study; updated IC 5 with additional clarification on the definition of intolerance of infliximab (IFX) for entry purposes; updated Ethics Committee (EC) 10 to add the definition of excluded medications; updated to clarify EC 16 also applied to subjects who previously received fecal microbial transplantation; updated to clarify that EC 19 also applied to subjects who previously received adalimumab; added trade name of vedolizumab; concomitant therapy updated to clarify the need for any immunosuppressants taken at Baseline to remain at stable doses throughout the study and to clarify that the taper schedule was a proposal and to clarify how changes in ulcerative colitis (UC) related medications during the study were to be handled with respect to efficacy and safety assessment; prohibited therapy updated to address marijuana use due to possible interference with subject self-assessments and align with clarification made to EC 16; updated timepoints as it is required to have the stool sample taken prior to bowel prep so this should be done during the Screening period not the Baseline visit; clarified procedures for stool collection of samples; provided further guidance around Unscheduled Visits; clarified that sites do not need to send endoscopy videos for central review if the site determines that the subject does not meet IC of an endoscopy subscore of 2 or 3 and additional information added for clarification of what sites should record in the electronic case report form (eCRF);
02 June 2014	(continued) updated to clarify collection requirements for the additional biopsy samples taken for histologic assessment, clarified that if a biopsy is taken for UC confirmation it will be processed, read locally, and added language to specify that the additional biopsies taken for histologic samples will not be read in real time by the central laboratory; updated requirements such that any positive test whether purified protein derivative (tuberculin) or interferon-γ release assays (IGRA) will be considered tuberculosis (TB) positive; added additional direction for chest x-ray (CXR) documentation; provided clarification on what were considered the baseline laboratory test values; added pH to urinalysis under clinical laboratory testing, updated to reflect that dipstick urinalyses are done and only sent on to central lab for microscopy efficacy variables will be based on the central reading endoscopy subscore and the procedure for handling missing data for continuous variables are described in the SAP; specified the endpoints for Interim Analysis are for Week 8; details added about Week 8 Mayo score will be utilizing the endoscopy subscore provided by the site; Appendix edited to allow determination of loss of response or intolerance to IFX to be based on the investigator's assessment; and added clarification that for the Japan Substudy, Unscheduled Visit procedures are only needed when subjects are coming in for assessment of their UC and removed details about immediate sending of PK samples at specific weeks because Japan Substudy does not have the TDM arm. when the dipstick is abnormal; provided the definition of "remission" and "response;" clarified that the presence of extraintestinal manifestations over time will be assessed as a nonranked secondary endpoint;

02 June 2014	(continued) efficacy variables will be based on the central reading endoscopy subscore and the procedure for handling missing data for continuous variables are described in the SAP; specified the endpoints for Interim Analysis are for Week 8; details added about Week 8 Mayo score will be utilizing the endoscopy subscore provided by the site; Appendix edited to allow determination of loss of response or intolerance to IFX to be based on the investigator's assessment; and added clarification that for the Japan Substudy, Unscheduled Visit procedures are only needed when subjects are coming in for assessment of their UC and removed details about immediate sending of PK samples at specific weeks because Japan Substudy does not have the TDM arm.
03 December 2015	Major changes included: added a secondary Sponsor/Emergency contact for sites in Japan; clarified language regarding stool collection instructions for the subject; clarified that PK testing is to remain blinded and local pharmacokinetic (PK) testing is not be performed; updated the list of approved adalimumab indications; clarified procedures for corticosteroid taper at Week 4; clarified sample collection for pharmacogenetic samples; clarified IC 4 regarding required 6 thioguanine nucleotide (TGN) level; clarified TB testing procedures at screening; clarified regarding shipment of adalimumab samples during specific weeks; updated language regarding adverse event (AE) reporting and the 24 hour AbbVie Medical Escalation Hotline; updated language regarding protocol deviations; added language regarding sample withdrawal; added language around public disclosure; and added Japan requirements for reporting AEs and Japan's Regional Medical Monitor contact information.
16 June 2016	Major changes included: updated to include updated names of statistical groups due to statistical changes in protocol; updated terminology from "arm" to "regimen," "dosing regimen" or "treatment group" as appropriate and introduce terminology Induction Study and Maintenance Study; added clarification that both Main and Substudy have an Induction Study and a Maintenance Study; updated with new study enrollment numbers; added language to clarify collection of pharmacogenetic sample; clarified corticosteroid language; added clarification to serum concentration in TDM regimen to mean adalimumab serum concentration; added clarification to the results when testing for hepatitis B surface antibody; updated to convey that 840 subjects will be enrolled at up to 125 sites in the Main Study; updates made to total number of PK samples; clarified concomitant therapy assessment rules; clarified language on how previous TB medications should be collected and added to the eCRF; primary, secondary, and additional variables explained for the Induction Study and Maintenance Study; treatments administered were updated to reflect Week 52 or Premature Discontinuation; treatment compliance clarified that instruction is for home dosing; added clarification that medications for AEs/serious adverse events (SAEs) should be collected during 70-day follow-up phone call and that all 70 day follow-up phone call data is to be entered in the eCRF and recorded in source documentation; additional information added on the SAP between the Main Study and Substudy; added language about the method and interpretation between the dosing regimens; clarified statistical analysis delineating between Induction and Maintenance Studies; updated noting that interim analysis may be performed via a database cut; updated to provide scientific justification of the increase in the number of subjects; updated power of statistical analyses;
16 June 2016	(continued) updated to collect date of last study drug administration, collect reason if 70 day follow-up call was not performed, and added additional help text; deleted Japan Substudy planned methods of statistical analysis from Appendix K; and interim analyses for the Japan Substudy was updated noting that interim analysis will be performed only if performed for the Main Study.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
